Detailed Syllabus

DAV UNIVERSITY, JALANDHAR

Course Title: Engineering Mathematics-I
Paper Code: MTH151A

L	T	P	Credits
4	0	0	4

Objective: The aim of this course is to familiarize the students with the theory of matrices which are used in solving equations in mechanics and the other streams. This course also provides a comprehensive understanding of the origin and development of ideas to exhibit the techniques origin and development of ideas to exhibit the techniques of solving ordinary differential equations.

Unit-A

Rank of matrices, Inverse of Matrices, Gauss Jordan Method, reduction to normal form, Consistency and solution of linear algebraic system of equations, Gauss Elimination Method, Eigen values and Eigen vectors, Diagonalisation of Matrix, Cayley Hamilton theorem. Orthogonal, Hermitian and unitary matrices.

Unit-B

Concept of limit and continuity of a function of two variables, Partial derivatives, Homogenous Function, Euler's Theorem, Total Derivative, Differentiation of an implicit function, chain rule, Change of variables, Jacobian, Taylor's and McLaurin's series. Maxima and minima of a function of two and three variables: Lagrange's method of multipliers.

Unit-C

Formation of ordinary differential equations, solution of first order differential equations by separation of variables, Homogeneous equations, Reduce to Homogenous, exact differential equations, equations reducible to exact form by integrating factors, equations of the first order and higher degree, Clairaut's equation.

Unit-D

Solution of differential equations with constant coefficients: method of differential operators. Non-homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters, Simultaneously Linear differential equation.

DAV UNIVERSITY, JALANDHAR

Course Title: Chemistry

Course Code: CHE151A

L	T	P	Credits
4	0	0	4

Course Objectives:

The objective of the Engineering Chemistry is to acquaint the student with the basic phenomenon/concepts of chemistry for the development of the right attitudes by the engineering students to cope up with the continuous flow of new technology. The student will be able to understand the new developments and breakthroughs efficiently in engineering and technology.

Expected Prospective:

This course will equip students with the necessary chemical knowledge concerning the fundamentals as well as new technology in the field of chemistry.

Unit- A

Spectroscopy and its Applications

General Introduction: Introduction, electromagnetic spectrum, absorption and emission spectrum, atomic and molecular spectroscopy, types of molecular spectra, experimental techniques, selection rules, width and intensities of spectral lines.

UV/Visible Spectroscopy: types of electronic Transitions, Chromophores, Auxochromes, Effect of conjugation on Chromophores, Factors affecting λ_{max} and intensity of spectral lines, effect of solvent on λ_{max} , isobestic point, applications.

IR Spectroscopy: Infrared region, fundamental modes of vibrations and types, theory of infrared spectra, vibrational frequency and energy levels, anharmonic oscillator, modes of vibrations of polyatomic molecules, characteristic signals of IR spectrum, finger print region, factors affecting vibrational frequency; applications.

NMR Spectroscopy: Principle and instrumentation, relaxation processes, proton magnetic resonance spectroscopy, number of signals, Chemical shift, Spin-Spin Splitting, coupling constant, applications.

Unit- B

Water and its treatment

Introduction, hardness of water, degree of hardness, units of hardness, boiler feed water: specification, scales and sludge formation; priming & foaming, boiler corrosion, caustic embrittlement, treatment of boiler feed water, internal treatment of water; softening of water by lime-soda, zeolite and ion exchange methods, desalination of water; Water for domestic use: purification of water for domestic use.

Corrosion and its Prevention

Introduction; different types of corrosion - wet and dry corrosion; mechanism of wet corrosion; comparison of dry and wet corrosion, Types of electrochemical corrosion: galvanic corrosion, concentration cell corrosion or differential aeration corrosion, waterline corrosion, pitting corrosion, crevice corrosion, stress corrosion, intergranular corrosion; other forms of corrosion: atmospheric corrosion, soil corrosion, microbiological corrosion, erosion corrosion, Filliform corrosion, stray current corrosion, passivity, galvanic series, factors influencing corrosion, various methods of corrosion control.

Unit-C

Chemistry in Nanoscience and Technology

Introduction, Materials self-assembly, molecular vs. material self-assembly, hierarchical assembly, self-assembling materials, two dimensional assemblies, mesoscale self-assembly,

DAV UNIVERSITY, JALANDHAR

coercing colloids, nanocrystals, supramolecular structures, nanoscale materials, future perspectives applications, nanocomposites and its applications.

Unit-D

Polymers and polymerization

Introduction, monomer and repeating unit, degree of polymerization, functionality, classification of polymers: based on origin, monomers, structure, method of synthesis, tacticity or configuration, action of heat, chemical composition, ultimate form; types of polymerization, specific features of polymers, regularity and irregularity, tacticity of polymers, average molecular weights and size, determination of molecular weight by number average methods, effect of molecular weight on the properties of polymers, introduction to polymer reinforced composites.

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Fundamentals and Programming
Course Code: CSE101A

L	T	P	Credits
4	0	0	4

Course Objective: To get basic knowledge of computers (hardware and software), its components and Operating systems. To acquire programming skills in C, basic knowledge of Internet

Unit-A

Introduction to Computers

Define a Computer System, Block diagram of a Computer System and its working, memories, Volatile and non-volatile memory, cache, virtual, secondary storage devices-Magnetic Tape, Hard Disk, CD-DVD, Magnetic Disk, Various input devices including keyboard, Mouse, Joystick, Scanners and Various output devices including Monitors, Printers, Plotters

Operating Systems

Computer Software and its types and Hardware, Operating Systems, their types and functions

Unit-B

Working Knowledge of Computer System

Introduction to word processors and its features, creating, editing, printing and saving documents, spell check, mail merge, creating power point presentations, creating spreadsheets and simple graphs.

Fundamentals of Internet Technology

Local area networks, MAN and wide area network, Internet, WWW, E-mail, Browsing and Search engines, Internet Connectivity, Network Topology, Hub, Switches, Router, Gateway.

Unit-C

Basic Constructs of C

Keywords, Identifiers, Variables, Data Types and their storage, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Increment & Decrement Operators, Expressions, Conditional Expressions, Assignment Operators and Expressions, External Variables and Scope of Variables, Structure of C Program.

Control Structures

Decision making statements: if, nested if, if – else ladder, switch, Loops and iteration: while loop, for loop, do – while loop, break statement, continue statement, goto statement.

Unit-D

Functions

Advantages of functions, function prototype, declaring and defining functions, return statement, call by value and call by reference, recursion, and storage classes.

Arrays and Strings

Declaration of arrays, initialization of array, accessing elements of array, I/O of arrays, passing arrays as arguments to a function, strings, I / O of strings, string manipulation functions (strlen, strcat, strcpy, strcmp)

DAV UNIVERSITY, JALANDHAR

Course Title: Environmental Studies
Paper Code: EVS100

L	T	P	Credits
4	0	0	4

Course Objective: This course aims at understanding the students in aspects of environmental problems, its potential impacts on global ecosystem and its inhabitants, solutions for these problems as well as environmental ethics which they should adopt to attain sustainable development.

Unit- A

The multidisciplinary nature of environmental studies

Definition, scope and importance, Need for public awareness

Natural Resources: Renewable and non-renewable resources:

Natural resources and associated problems

(a) **Forest resources:** Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

(b) **Water resources:** Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

(c) **Mineral resources:** Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

(d) **Food resources:** World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

(e) **Energy resources:** Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

(f) **Land resources:** Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

Ecosystem:

- Concept of an ecosystem
- Structure and function of an ecosystem
- Producers, consumers and decomposers
- Energy flow in the ecosystem
- Ecological succession
- Food chains, food webs and ecological pyramids
- Introduction, types, characteristic features, structure and function of the following ecosystem:

a. Forest ecosystem

b. Grassland ecosystem

c. Desert ecosystem

d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

Unit -B

Biodiversity and its conservation

- Introduction – Definition: Genetic, Species and Ecosystem Diversity
- Bio-geographical classification of India
- Value of biodiversity: Consumptive use, Productive use, Social, Ethical, Aesthetic and Option values

DAV UNIVERSITY, JALANDHAR

- Biodiversity at global, national and local levels
- India as a mega-diversity nation
- Hot-spots of biodiversity
- Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts
- Endangered and endemic species of India
- Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity, global and national efforts.

Environmental Pollution

- Definition, causes, effects and control measures of:
 - a. Air pollution
 - b. Water pollution
 - c. Soil pollution
 - d. Marine pollution
 - e. Noise pollution
 - f. Thermal pollution
 - g. Nuclear pollution
- Solid waste management: Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution
- Pollution case studies
- Disaster management: floods, earthquake, cyclone and landslides

Unit-C

Social Issues and the Environment

- Population growth, variation among nations, Population explosion – Family Welfare Programmes.
- Environment and human health,
- From unsustainable to sustainable development
- Urban problems and related to energy
- Water conservation, rain water harvesting, watershed management
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation
- Consumerism and waste products
- Environmental Laws: The Environment Protection Act, 1986; The Air (Prevention and Control of Pollution) Act, 1981; The Water (Prevention and control of Pollution) Act 1974; The Wildlife Protection Act, 1972; Forest Conservation Act, 1980.
- Issues involved in enforcement of environmental legislation
- Public Awareness

Unit-D

Human Population and Environment

- Population Growth and Variations among Nations
- Population Explosion
- Human Rights
- Value Education

DAV UNIVERSITY, JALANDHAR

- HIV / AIDS
- Women and Child Welfare
- Role of Information Technology in Environment and Human Health
- Case Studies

Field Work

- Visit to a local area to document environmental assets river/ forest/ grassland/hill/mountain
- Visit to a local polluted site – Urban / Rural / Industrial / Agricultural
- Study of common plants, insects, birds
- Study of simple ecosystems-Pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Engineering Drawing

Course Code: MEC101A

L	T	P	Credits
2	0	4	4

Course Objectives: Students will be able to use the techniques to interpret the drawings and to use it in the field work of engineering. They will learn various lines, planes, solids and their sectioning and to develop their lateral surfaces. Concepts of orthographic and isometric projections

Unit-A

Drawing Techniques

Introduction to drawing instruments, various types of lines and their convention, principles of dimensioning, Engineering symbols, Gothic lettering in single stroke as per SP-46 code (Vertical and inclined)

Scales

Concept of scaling, construction of plane and diagonal scales

Unit-B

Projection of Points

Concept of plane of projections (Principle planes), First and third angle projections; projection of points in all four quadrants, shortest distance problems

Projection of Lines and Planes

Projection of line parallel to both planes, perpendicular to one plane, inclined to one and both the reference planes and their traces. Plane perpendicular to one plane inclined to one and both the reference planes and their traces. Concept of profile plane and auxiliary planes, To find the true length, α , β , θ and Φ .

Unit-C

Projection of Solids

Right and oblique solids; solids of revolution and polyhedrons, projection of solid with axis perpendicular to one plane and parallel to one or both reference planes. Projection of solid with axis inclined to one or both reference planes.

Sectioning of Solids

Theory of sectioning, types of section planes, their practice on projection of solids, Sectioning by auxiliary planes, to find true section of truncated solids.

Unit-D

Development of Surfaces

Method of Development, Development of surfaces: Parallel line and Radial line method. Development of oblique solids, Development of curved surfaces.

Orthographic and Isometric Views

Draw orthographic views from isometric view or vice-a-versa, Missing line and missing view

Course Title: Basic Communication Skills

Course Code: ENG151A

L	T	P	Credits
3	0	0	3

Course Objective:

- To enhance students' vocabulary and comprehensive skills through prescribed texts.
- To hone students' writing skills.

Learning Outcomes: Students will be able to improve their writing skills as well as will enrich their word power.

Unit - A

Applied Grammar (Socio-Cultural Context)

1. Parts of Speech: Noun, Pronoun, Adjective, Verb, Adverb, Preposition, Conjunction, Interjection
2. Tenses (Rules and Usages in Socio-cultural contexts)
3. Modals: Can, Could, May, Might, Will, Would, Shall, Should, Must, Ought to
4. Passive/Active
5. Reported/Reporting Speech

Unit - B

Reading (Communicative Approach to be followed)

1. J M Synge: Riders to the Sea (One Act Play)
2. Anton Chekhov : Joy (Short Story)
3. Swami Vivekanand : The Secret of Work (Prose)

Unit - C

Writing

1. Essay Writing and Letter Writing
2. Report Writing
3. Group Discussion & Facing an Interview

DAV UNIVERSITY, JALANDHAR

Course Title: Chemistry Lab

Course Code: CHE152

L	T	P	Credits
0	0	2	1

Course Objectives:

This course is intended to learn the basic concepts of Engineering Chemistry Laboratory. The present syllabus has been framed as per the recent research trends in the subject. The various experiments have been designed to enhance laboratory skills of the undergraduate students.

Expected Prospective:

The students will be able to understand the basic objective of experiments in Engineering chemistry, properly carry out the experiments, and appropriately record and analyze the results through effective writing and oral communication skills. They will know and follow the proper procedures and regulations for safe handling and use of chemicals.

List of Experiments

1. Verify Lambert Beer's law using spectrophotometer and CoCl_2 or $\text{K}_2\text{Cr}_2\text{O}_7$ solution.
2. Determine the strength of HCl solution by titrating against NaOH solution conductometrically.
3. Determination of the strength of HCl solution by titrating against NaOH using pH meter.
4. Determination of total hardness of water (tap) using standard EDTA solution and Eriochrome black T indicator.
5. Determination of alkalinity of water.
6. Determination of surface tension of given liquid by using Stalagmometer.
7. Determination of residual chlorine in a water sample.
8. Determination of Flash & Fire point of given a given lubricating oil by Pensky-Marten's apparatus.
9. Determination of the viscosity of given lubricating oil by using Redwood Viscometer.
10. Preparation of a polymer phenol/urea formaldehyde resin.
11. Determination of moisture, volatile matter and ash content in a given sample of coal by proximate analysis.
12. Determination of dissolved oxygen present in given sample of water.

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Fundamentals and Programming Lab
Course Code: CSE103

L	T	P	Credits
0	0	2	1

Instruction for Students: The students will be attending a laboratory session of 2 hours weekly and they have to perform the practical related to the following list.

List of Experiments

1. Practical know-how of various internal and external Hardware components of a computer (including basic working of peripheral devices).
2. Introduction to Operating Systems; installing Windows; basics of windows.
3. Working knowledge of Internet.
4. Introduction to word processor and mail merge.
5. Introduction to MS-Excel.
6. Working on MS-PowerPoint.
7. Introduction to basic structure of C program, utility of header and library files.
8. Implementation of program related to the basic constructs in C
9. Programs using different data types in C
10. Programs using Loops and Conditional Statements in C
11. Programs using functions by passing values using call by value method.
12. Programs using functions by passing values using call by reference method.
13. Programs using arrays single dimension in C.
14. Program to implement array using pointers
15. Programs related to string handling in C

DAV UNIVERSITY, JALANDHAR

Course Title: Basic Communication Skills Lab
Course Code: ENG152

L	T	P	Credits
0	0	2	1

Course Objective:

- To improve fluency in speaking English.
- To promote interactive skills through Group Discussions and role plays.

Learning Outcome: Students will get exposure to speaking through the above mentioned interactive exercises. In addition, they will develop a technical understanding of language learning software, which will further improve their communicative skills.

Unit – A Speaking/Listening

1. Movie-Clippings (10 Hrs)
2. Role Plays (10 Hrs)
3. Group Discussions (10 Hrs)

DAV UNIVERSITY, JALANDHAR

Course Title: Engineering Mathematics-II
Course Code: MTH152A

L	T	P	Credits
4	0	0	4

Objective:

The objective of the course is to equip the students with the knowledge of concepts of vectors and geometry and their applications. A flavour of pure mathematics is also given to the readers.

Unit-A

Functions of Complex Variables: Complex Numbers and elementary functions of complex variable De-Moivre's theorem and its applications. Real and imaginary parts of exponential, logarithmic, circular, inverse circular, hyperbolic, inverse hyperbolic functions of complex variables. Summation of trigonometric series. (C+iS method).

Unit-B

Integral Calculus: Rectification of standard curves; Areas bounded by standard curves; Volumes and surfaces of revolution of curves;

Multiple Integrals: Double and triple integral and their evaluation, change of order of integration, change of variable, Application of double and triple integration to find areas and volumes. Centre of gravity and Moment of inertia

Unit-C

Vector Calculus: Scalar and vector fields, differentiation of vectors, velocity and acceleration.

Vector differential operators: Del, Gradient, Divergence and Curl, their physical interpretations. Line, surface and volume integrals.

Application of Vector Calculus: Flux, Solenoidal and Irrotational vectors. Gauss Divergence theorem. Green's theorem in plane, Stoke's theorem (without proofs) and their applications

Unit-D

Infinite Series: Convergence and divergence of series, Tests of convergence (without proofs): Comparison test, Integral test, Ratio test, Raabe's test, Logarithmic test, Cauchy's root test and Gauss test. Convergence and absolute convergence of alternating series, Uniform Convergence and Power Series

DAV UNIVERSITY, JALANDHAR

Course Title: Engineering Physics
Course Code: PHY151A
Total Lecture: 60

L	T	P	Credits
4	0	0	4

Course Objective: The aim of this course on physics is to make the student of engineering understand the basic concepts of physics which will form the basis of certain concept in their respective fields.

Unit-A

PHYSICAL OPTICS:

Interference: Division of wave front, Fresnel's biprism, division of amplitude, Newton's rings and applications.

Diffraction:

Difference between Fraunhofer and Fresnel diffraction, Fraunhofer diffraction through a slit, plane transmission diffraction grating, its dispersive and resolving power.

Polarization: Polarised and unpolarised light, double refraction, Nicol prism, quarter and half wave plates.

Unit-B

LASER: Spontaneous and stimulated emission, Laser action, Characteristics of laser beam, concept of coherence, HeNe laser, Semiconductor lasers and applications

FIBRE OPTICS: Propagation of light in fibres, numerical aperture, single mode and multimode fibres, applications

Unit-C

DIELECTRICS:

Molecular Theory, polarization, displacement, susceptibility, dielectric coefficient, permittivity, relations between electric vectors, Gauss's law in the presence of a dielectric, energy stored in an electric field, Behaviour of dielectric in alternating field and ClausiusMossotti equation.

Unit-D

QUANTUM MECHANICS:

Difficulties with Classical physics, Introduction to quantum mechanics simple concepts, Black Body radiation, Planck's Law of radiation and its limitations, Group velocity and phase velocity, Schrodinger's wave equations and their applications.

SUPER CONDUCTIVITY:

Introduction (experimental survey), Meissner effect, Type I and type II superconductors, London equation, Elements of BCS theory, Applications of superconductors.

DAV UNIVERSITY, JALANDHAR

Course Title: Mechanical Engineering Fundamentals

Course Code: MEC103

L	T	P	Credits
4	0	0	4

Course Objectives:

To impart the basic knowledge of thermodynamic principles, design principles, power transmission devices, power producing and power absorbing devices.

Unit-A

Fundamental Concepts of Thermodynamics

Introduction, Thermodynamic System and its types, Boundary and its types, Surroundings, Thermodynamic properties, State, Path, process and cycles, Thermodynamic Equilibrium, Working Substance, Microscopic and Macroscopic Analysis, Units and Dimensions, Quasi Static Process, Reversible and Irreversible processes, Point Function and Path Function, Mechanical and Thermodynamic work, P-dv Work (Displacement Work), Work is a Path Function, Equations for work done in various processes

Laws of Thermodynamics

Zerth law of Thermodynamics, Temperature, Thermometry (Measurement of temperature), Temperature Scales, Energy, Potential and Kinetic Energies at Micro and Macro Level, Internal Energy, Law of conservation of energy, Joule's Experiment, First law of thermodynamics (Open and Closed System), Energy – A property of system, Enthalpy, Entropy, Heat, Heat vs Temperature, specific heat, Heat Capacity, Specific heat at constant volume, Specific heat at constant pressure, Adiabatic Index, Limitations of first law of thermodynamics

Unit-B

Pressure

Pressure Concept and Definition, Pressure conversion Table, Atmospheric pressure, Standard Atmospheric Pressure, Gauge Pressure, Vacuum Pressure, Absolute pressure, Properties of fluid, Pressure head of a Liquid, Pascal's Law, Pressure measurement: Mechanical Gauges and Manometers, Mechanical Gauges: (Bourdon tube pressure gauge, Diaphragm pressure gauge, Dead weight), Manometers: (Principle/Advantage/Limitation/ Classification), Piezometer, Single U tube manometer (Numerical for Vacuum and Gauge pressure), [Simple problems on above topics]

Heat Transfer

Introduction, Heat Transfer vs Thermodynamics, Applications, Thermal Conductivity, Thermal Resistance, Modes of heat transfer, Spectrum of electromagnetic radiation, Surface emission properties, Absorptivity, Reflectivity and Transmissivity, Fourier law, Newton's law of cooling, Stefan Boltzmann's Law, Heat Exchangers (Applications, Selection, Classification), Thermal Insulation (Properties of insulation, Types of Insulations, Thermal Insulating Materials)

Power Absorbing Devices

Power Absorbing Devices, Difference between Hydraulic pump, Air compressor, Fan, Blower, Pump (Function, Selection, Applications), Classification of Pump, Positive displacement and Dynamic Pumps, Reciprocating Pumps and its types, Rotary Pumps and its types, Centrifugal Pump, Axial Pump

Unit-C

Power Producing Devices Boiler

States of matter, Changing State of Matter, Sublimation, Effect of temperature during change of Phase, Steam boiler, Application, Classification of boilers, Types of boilers (Brief Description),

DAV UNIVERSITY, JALANDHAR

Essentials of a good boiler, Advantages of superheating the steam, Comparison between Water tube and Fire tube boilers, Function of boiler Mountings and Accessories

Turbines

Turbine, Classification based on working fluid, Classification of hydraulic turbines, Selection of hydraulic turbines, Impulse Turbines (Pelton Wheel/ Turgo/ Cross Flow), Reaction Turbines (Francis/ Kaplan/ Propeller)

Internal Combustion Engines

Heat Engine, Types of Heat Engine, Advantages, Disadvantages and Applications, Classification of IC Engine, Engine Components (Location, Function and Material), Basic Terminology used in IC engine, Four stroke Cycle Engines (SI and CI), Two stroke Cycle Engines (SI and CI)

Unit-D

Principles of Design

Need of design, Product Life Cycle, Material properties and selection, Factors affecting material selection, Stress and Strain and its types, Hooke's law, Modulus of Elasticity, Longitudinal and Lateral Strain, Poisson's ratio, Stress- Strain Curve for ductile material and brittle material, Factor of Safety, Centre of Gravity, Centroid, Centroid of areas of plain, Figures (Without Derivation), Centroid of areas of composite sections (Without Derivation), Moment of Inertia, Radius of gyration, Theorem of perpendicular axis, Theorem of parallel axis, MI of L, I and T sections, [Simple problems on above topics]

Power Transmission Devices and Machine Elements

Individual and group drive system (advantages and Disadvantages), Belt drive (Types: V and Flat Belts and their Applications, Advantages and Disadvantages), Ropes drive (Types: Fiber and Wire Ropes and their Applications, Advantages and Disadvantages), Chain drive (Applications, advantages and Disadvantages, Sprockets), Gear drive (Types of Gears), Power transmission shafts, Types of shafts, Application of shafts, Axle, Keys (Function, Classification), Coupling (Function, Classification: Rigid and Flexible), Flanged coupling, Oldham's coupling, Universal coupling, Bearings and their types, Flywheel construction and types

DAV UNIVERSITY, JALANDHAR

Course Title: Electrical and Electronics Technology

Course Code: ELE101

L	T	P	Credits
4	0	0	4

Unit-A

D.C Circuit Analysis:

Voltage source, current source, dependent and independent sources, analysis of D.C circuit by KCL and KVL, Nodal and Mesh analysis, Thevenin theorem, Norton theorem, superposition theorem, Maximum Power Transfer Theorem

Unit-B

A.C Circuit Analysis:

Review of single phase A.C. circuit under sinusoidal steady state, solution of R.L.C. Series circuit, the j operator, complex representation of impedance, solution of series and parallel circuit, series and parallel resonance, 3 phase A.C. Circuit, star and delta connections, line and phase quantities solution of 3 phase circuits, balanced supply voltage and balanced supply voltage and balanced load, phasor diagram, measurement of power and power factor by two wattmeter method.

Unit-C

Magnetic Circuit:

Review of laws of electromagnetism, Flux, MMF and their relation. Comparison of electrical and magnetic circuit, B-H Curve, saturation leakage and fringing. Analysis of series and parallel magnetic circuit, AC Excitation in magnetic circuits, Hysteresis and eddy currents.

Transformers:

Single phase transformer, basic concepts constructional detail, type, voltage current and impedance Transformation, phasor diagram, equivalent circuit, voltage regulation, oc/sc test, losses and efficiency concept of All day efficiency, autotransformer.

Unit-D

Rotating Electrical Machines:

Basic concepts, working principle and general construction of DC machines (motor/generators), torque and EMF expression

Basic Electronics:

P-Type and N-Type semiconductor, concept of diode, transistor and their application, introduction to OPAMP, application of op amp as a subtractor, summer, differentiator, integrator, logic gates AND, OR, NOT, NOR, NAND etc.

DAV UNIVERSITY, JALANDHAR

Course Title: Human Values and General Studies
Course Code: SGS107

L	T	P	Credits
4	0	0	4

Course Objectives

- To sensitize students about the role and importance of human values and ethics in personal, social and professional life.
- To enable students to understand and appreciate ethical concerns relevant to modern lives.
- To prepare a foundation for appearing in various competitive examinations
- To sensitize the students about the current issues and events of national and international importance
- To provide opportunity to the students to study inter disciplinary subjects like Geography, Science, Economy, Polity, History, International Relations etc.

Unit-A

Human Values

- Concept of Human Values:** Meaning, Types and Importance of Values.
- Value Education :** Basic guidelines for value education
- Value crisis and its redressal**

Being Good and Responsible

- Self Exploration and Self Evaluation
- Acquiring Core Values for Self Development
- Living in Harmony with Self, Family and Society
- Values enshrined in the Constitution: Liberty, Equality
- Fraternity and Fundamental Duties.

Unit-B

Value – based living

- Vedic values of life
- Karma Yoga* and *Jnana Yoga*
- AshtaMarga* and *Tri-Ratna*

Ethical Living:

- Personal Ethics
- Professional Ethics
- Ethics in Education

Unit-C

General Geography

World Geography

The Universe, The Solar System, The Earth, Atmosphere, The World we live in, Countries rich in Minerals, Wonders of the World, Biggest and Smallest.

Indian Geography

Location, Area and Dimensions, Physical Presence, Indian States and Union Territories, Important sites and Monuments, Largest-Longest and Highest in India.

General History

Glimpses of India History, Ancient Indian, Medieval India, Modern India, Various Phases of Indian National Movement, Prominent Personalities, Glimpses of Punjab history with special reference to period of Sikh Gurus

DAV UNIVERSITY, JALANDHAR

Glimpses of World History

Important Events of World History, Revolutions and Wars of Independence, Political Philosophies like Nazism, Fascism, Communism, Capitalism, Liberalism etc.

Indian Polity: Constitution of India

Important Provisions, Basic Structure, Union Government, Union Legislature and Executive, State Government: State Legislature and Executive, Indian Judiciary, The Election Commission, Panchayati Raj System, RTI etc.

General Economy

The process of liberalization, privatization, globalization and Major World Issues, Indian Economy, Indian Financial System, Major Economic Issues, Economic Terminology.

Unit-D

General Science

General appreciation and understandings of science including the matters of everyday observation and experience, Inventions and Discoveries

Sports and Recreation

The World of Sports and recreation, Who's Who is sports, Major Events, Awards and Honours. Famous personalities, Festivals, Arts and Artists

Current Affairs

National and International Issues and Events in News, Governments Schemes and Policy Decisions

Miscellaneous Information

Who is who?

Books and Authors, Persons in News, Awards and Honours, Abbreviations and Sports

Course Title: Manufacturing Practice

Course Code: MEC104

L	T	P	Credits
0	0	4	2

Course Objective:

1. Know basic workshop processes, Read and interpret job drawing.
2. Identify, select and use various marking, measuring, holding, striking and cutting tools & equipment's
3. Operate and control different machines and equipment's.

CARPENTRY SHOP

- a) Preparation of half lap joint
- b) Preparation of Mortise and Tenon Joint
- c) Preparation of a Dove & Tail joint
- d) To prepare a White board duster

Welding Shop:

- a) Preparation of Joint by Arc Welding
- b) Preparation of Joint by using Gas Welding
- c) Preparation of Joint by MIG/ TIG Welding
- d) Preparation of Joint by Spot/ Seam Welding

Smithy Shop

- a) To Forge the L – Hook
- b) To Forge a Chisel
- c) To Forge a Cube from a M.S Round
- d) To forge a screw driver

Fitting Shop

- a) Filing a dimensioned rectangular or square piece and prepare a sq. fitting
- b) Preparation of T fitting male part
- c) Preparation of U fitting Female part
- d) Internal thread Cutting in Square piece and external thread cutting on a rod and assembling as a paper weight

Foundry Shop:

- a) To make a Mould of solid pattern
- b) To prepare a mould of sleeve fitting using gating system
- c) To make a Mould of Split Pattern using Cope & Drag
- d) To check the Hardness of the Mould
To check the Moisture Content in the Molding Sand
To check the Compressive Strength of Molding Sand

Sheet-Metal Shop

- a) Preparation of a funnel from G.I. sheet
- b) Preparation of a book rack stand from G.I. Sheet
- c) Preparation of a leak proof tray with inclined edges from G.I. Sheet
- d) Preparation of a square pen stand from G.I. Sheet with riveting at corners

Machine Shop

- a) To make a job using step turning and grooving
- b) To make a job using knurling and threading
- c) To make a multi operation job on a Lathe machine
- d) To make V – slot by using shaper machine

DAV UNIVERSITY, JALANDHAR

Electrical Shop

- a) Layout of electrical tube light wiring
- b) Layout of stair case wiring using two way switch
- c) Testing and rectification of simulated faults in electrical appliances such as 'Electric Iron' Ceiling Fan. Electric kettle
- d) To fabricate a circuit for the electrical wiring of, Fan with regulator and Bulb through a main switch and its testing using a series lamp

DAV UNIVERSITY, JALANDHAR

Course Title: Engineering Physics Lab

Course Code: PHY152

L	T	P	Credits
0	0	2	1

Objective: The laboratory exercises have been so designed that the students learn to verify some of the concepts learnt in the theory courses. They are trained in carrying out precise measurements and handling sensitive equipments.

Note:

- Students are expected to perform at least eight-ten experiments out of following list. The experiments performed in first semester cannot be repeated in second Semester.
- The examination for both the courses will be of 3 hours duration

List of Experiments:

Experimental skills: General Precautions for measurements and handling of equipment, representation of measurements, Fitting of given data to a straight line, and Error analysis, Significant figures and interpretation of results.

1. To determine the Refractive Index of the Material of a given Prism using Sodium Light.
2. To determine the Dispersive Power and resolving power of the Material of a given Prism using Mercury Light.
3. To determine wavelength of sodium light using Fresnel Biprism.
4. To determine wavelength of sodium light using Newton's Rings.
5. To determination Wavelength of Sodium Light using Michelson's Interferometer.
6. To determine the wavelength of Laser light using Diffraction of Single Slit.
7. To determine the wavelength of (1) Sodium and (2) Mercury Light using Plane Diffraction Grating.
8. To determine the (1) Wavelength and (2) Angular Spread of HeNe Laser using Plane Diffraction Grating.
9. To study the wavelength of spectral lines of sodium light using plane transmission grating.
10. To study the specific rotation of sugar solution Laurent's half shade polarimeter method
11. To study the numerical aperture and propagation losses using HeNe laser Optical fibre set up.
12. To compare the focal length of two lenses by Nodal slide method.
13. To find the unknown low resistance by Carey Foster bridge.
14. To determine the beam divergence of the HeNe laser.
15. To study the Meissner's effect in superconducting sample.
16. To study the Faraday law of electromagnetic induction.
17. To study the capacitance by flashing/quenching of Neon bulb kit
18. To compare the two unknown capacitances of two capacitors by using DeSauty's bridge.
19. To find our out the unknown inductance by using the Anderson's bridge method.
20. To study the numerical aperture and propagation losses for He-Ne laser by using the optical fibre set up for
21. To study the Planck's constant by using photoelectric cell method.

DAV UNIVERSITY, JALANDHAR

Course Title: Electrical and Electronics Technology Lab
Course Code: ELE102

L	T	P	Credits
0	0	2	1

List of Experiments

1. To verify Ohm's Law, Kirchhoff's Current Law and Kirchhoff's Voltage Law.
2. To verify Thevenin's and Norton's theorems.
3. To verify Superposition theorem.
4. To verify Maximum Power Transfer theorem.
5. To study frequency response of a series R-L-C circuit and determine resonant frequency and Q-factor for various values of R, L and C
6. To study frequency response of a parallel R-L-C circuit and determine resonant frequency and Q-factor for various values of R, L and C.
7. To perform direct load test of a transformer and plot efficiency versus load characteristics.
8. To perform open circuit and short circuit test on transformer.
9. To perform speed control of DC motor.
10. Measurement of power in a three phase system by two wattmeter method.
11. To plot the V-I characteristics of PN-junction diode.
12. To verify the truth table of logic gates.

DAV UNIVERSITY, JALANDHAR

Course Title: Object Oriented Programming
Course Code: CSE201

L	T	P	Credits
4	0	0	4

Course Objective: To understand the basic concepts of object oriented programming language.

Learning Outcomes: Students will feel comfortable working with computers and will have practical knowledge about Object-Oriented programming language (C++/Java Language).

PART-A

Object-Oriented Programming Concepts

Introduction, comparison between procedural programming paradigm and object-oriented programming paradigm, Basic concepts of object-oriented programming — concepts of an object and a class, interface and implementation of a class, abstraction, encapsulation, data hiding, inheritance, overloading, polymorphism, Declaring and initializing pointers, accessing data through pointers.

Functions and Arrays

Defining a function, Actual and Formal Arguments, Local and global variables, Nested functions, recursive functions , Array declaration, character array, multidimensional array, arrays and pointers

(12 Hours)

PART-B

Classes and Objects

Specifying a class, creating class objects, accessing class members, Access specifiers, static members, nested classes, local classes, abstract classes.

Constructors and Destructors: copy constructor, dynamic constructors, explicit constructors,

Operator Overloading and Type Conversion

Overloading operators, rules for overloading operators, Overloading of various operators, Type conversion.

(12 Hours)

PART-C

Inheritance

Introduction, defining derived classes, Types of inheritance, virtual base class, Pure virtual functions, overriding member functions.

Polymorphism

Concept of binding - early binding and late binding, Virtual functions, abstract classes, Virtual destructors.

Standard Input/Output Operations

Concept of streams, hierarchy of console stream classes, Input/output using overloaded operators >> and << of I/O stream classes, formatting output, Manipulators

(15 Hours)

PART-D

Working with Files

File streams, hierarchy of file stream classes, Error handling during file operations, Reading/writing of files, updating files.

Exception Handling

Review of traditional error handling, basics of exception handling, Exception handling mechanism, throwing mechanism, catching mechanism

(8 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Organization & Architecture

Course Code: CSE209

L	T	P	Credits
4	0	0	4

Course Objective: This course offers a good understanding of the various functional units of a computer system and prepares the student to be in a position to design a basic computer system.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of the working of the each functional and finally the student will be exposed to the recent trends in parallel and distributed computing and multithreaded application.

Part-A

Introduction

Basic organization of computers, Block level description of the functional units as related to the execution of a program; Fetch, decode and execute cycle.

Register Transfer and Micro operations

Register transfer language, Inter-Register Transfer, Arithmetic Micro-operations, Logic and Shift micro-operations Language, Control functions.

Arithmetic Logic Unit

Arithmetic, logic and shift micro operations. Constructing an arithmetic logic shift unit.

(10Hours)

Part-B

Basic Computer Architecture and Design

Computer registers, Computer Instructions-Instruction Set Completeness. Classifying Instruction Set Architecture. Basic steps of Instruction Execution. Hardwired Control. Micro programmed Control. Horizontal and Vertical Microprogramming. Interrupts.

Central Processing Unit

General Register Organization. Stack Organized CPU. Instruction Formats, Addressing Modes. Data Transfer and Manipulation, RISCVs CISC.

(11Hours)

Part-C

Pipelining

Parallel and pipeline Processing, Pipeline Control, Pipeline Implementations, Conflicts Resolution, and Pipeline Hazards. Vector Processing, and Array Processors.

Memory Organization

Memory Systems: principle of locality, principles of memory hierarchy Caches, associative memory, main memory, Virtual memory, Paging and Segmentation, Memory Interleaving.

(10Hours)

PART-D

Input Output Organization

I/O performance measures, types and characteristics of I/O devices, I/O Modes-Programmed I/O, Interrupt Initiated I/O and DMA. Buses: connecting I/O devices to processor and memory, interfacing I/O devices to memory, processor, and operating system.

Parallel Computers

Classification, SIMD, MIMD Organizations, Instruction and Arithmetic Pipeline, Parallel Processing.

(15Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Data Structures
Course Code: CSE211

L	T	P	Credits
3	1	0	3

Objective:-To impart knowledge of Data Structure and How to design Algorithms to solve different types of problems and to differentiate linear and nonlinear data structure.

Learning outcomes:-After reading data structure, student will be able to explain data structure and its scope in computer science. After completion of data structure, students will be able to find the best solution about specific types logical and mathematical problems.

PART-A

Introduction

Basic terminology, Data structure and their types, Data Structure Operations ,Algorithm, Complexity, Time Space Trade off, Control Structure and Complexity of Algorithm, Big Oh Notation.

Array

Representation of Linear array in memory, traversing linear Array, Searching Techniques: Linear search, Binary Search, Multi-dimensional array: 2D-Array, Representation of 2D-Array in memory. Record, Record Structure and Matrices.

(10 Hours)

PART-B

Linked List

Representation of Linear Linked List , Traversing a linked list , Operations on linked list , Memory Allocation , Garbage collection , Overflow and Underflow , Doubly linked list ,Circular Linked List , Header Linked List , Application of linked list.

(11 Hours)

PART-C

Stacks and Queues

Operation on Stack : Push , Arithmetic Expression , Polish Notation , Quick Sort : An Application of Stack , Complexity of Quick Sort , Recursion , Tower of Hanoi , Representation of Queue , Deques , Priority Queues.

Trees

Basic terminology, Binary Tree, Complete Binary Tree, Extended Binary Tree 2-tree, Traversing Binary Tree: Preorder, In order and Post order. Binary Search Tree, Searching& Inserting in Binary Search Tree, General tree.

(12 Hours)

PART-D

Graphs

Basic Terminology, Representation of Graph, Traversing of Graph : BFS, DFS. Applications of Graph.

Sorting

Bubble Sort, Insertion Sort, Selection Sort, Merging, Merge Sort, Hashing and Hash Functions.

(10 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Digital Electronics

Course Code: ECE201

L	T	P	Credits
4	0	0	4

Course Objectives: The purpose of this course is to develop a strong foundation in analysis and design of digital electronics.

Learning Outcomes: At the end of the course students should be able to:

- Understand concepts of combinational and sequential circuits.
- Analyze the synchronous and asynchronous logic circuits.
- Understand concepts of memory, programmable logic and digital integrated circuits

PART-A

Number System and Binary Code

Introduction, Binary, Octal, Hexadecimal & some nonstandard Number:-Conversions, Addition, Subtractions, Multiplication, Division, Weighted- Non weighted codes, Signed - unsigned numbers, Binary Subtractions using 1's and 2's compliment, ASCII code, Excess 3 code, Grey code, BCD code and BCD additions & BCD Subtractions.

Minimization of logic function

Review of gates: - OR, AND, NOT, NOR, NAND, EX-OR, EX-NOR, Universal gates.

(14Hours)

PART-B

Minimization of logic function

Basic theorem of Boolean algebra, Sum of Products and Product of Sums, canonical form, Minimization using: - Boolean algebra, K-map and Q-M method.

Combinational Circuits

Introduction, Combinational circuit design, Encoders, decoders, Adders, Sub tractors and Code converters, Parity checker, seven segment display, Magnitude comparators. Multiplexers, De-multiplexer, Implementation of Combinational circuit using MUX & De-MUX.

(14Hours)

PART-C

Sequential Circuits

Introduction, flip flops, Clocked flip flops, SR, JK, D, T and edge triggered flip-flops, Conversions of Flip flops, Shift Registers, Type of Shift Registers, Ring Counter, Twisted Ring Counter, Counters, Counter types, counter design with state equation and state diagrams.

D/A and A/D Converters

Introduction, Weighted register D/A converter, binary ladder D/A converter, steady state accuracy test, monotonicity test, D/A accuracy and resolution, A/D converter:- Simultaneous, Counter type, Continuous, Successive approximation, Single and dual slope A/D converter, A/D accuracy and resolution.

(14Hours)

PART-D

Semiconductor Memories

Introduction, Memory organization, Classification and characteristics of memories, Sequential memories, ROMs, R/W memories, Content addressable memories, PLA and PAL.

Logic Families

RTL, DCTL, DTLTTL, ECL, CMOS and its various types, Comparison of logic families.

(14Hours)

Course Title: Object Oriented Programming Lab

Course Code: CSE205

L	T	P	Credits
0	0	4	2

Instruction for Students: The candidate will be attending a laboratory session of 4 hours weekly and students have to perform the practical related to the following list.

List of Experiments

1. Introduction to basic structure of C++ program, utility of header and library files.
2. Implementation of program related to the basic constructs in C++
3. Programs using different data types in C++
4. Programs using Loops and Conditional Statements in C++
5. Programs using arrays single dimension in C++.
6. Programs using functions by passing values using call by value method and call by reference method.
7. Programs related to string handling in C++
8. Program to demonstrate the objects of the class and their working
9. Programs to implement the working of constructor & destructor
10. Programs to implement the concept of operator overloading
11. Programs to implement Inheritance and its types
12. Programs using early and late binding
13. Programs to show the working of abstract classes
14. Programs to show the working of Exception Handling
15. Program to illustrate the concept of file handling

DAV UNIVERSITY, JALANDHAR

Course Title: Data Structures Lab

Course Code: CSE213

L	T	P	Credits
0	0	4	2

Course Objectives:-Algorithm development in all areas of data structures covered in the course. Emphasis should be given on the following matters. Development of recursive as well as non recursive algorithms involving linked list trees and graphs. Use of pointers for dynamic allocations of storage. Development of classes for some of the data structures using the concept of abstract data types.

List of Experiments

- 1 W.A.P. and algorithm to check whether number is greater or not.
- 2 W.A.P. and algorithm to print that given number is even or odd.
- 3 W.A.P. and algorithm to check whether numbers prime or not.
- 4 W.A.P. to perform various types of Arithmetic operations.
- 5 W.A.P. to store marks of a student in array and then print.
- 6 W.A.P. of traversing of an array.
- 7 W.A.P. to implement Linear Search.
- 8 W.A.P. to implement Binary Search.
- 9 W.A.P. to implement Bubble Sort.
- 10 W.A.P. to implement Selection sort.
- 11 W.A.P. to generate the Fibonacci series using Array.
- 12 W.A.P. to find the transpose of matrix.
- 13 W.A.P. to addition & subtraction of two matrix
- 14 W.A.P. to know length of given string.
- 15 W.A.P. to demonstrate the operation performed on stack.

DAV UNIVERSITY, JALANDHAR

Course Title: Digital Electronics Lab

Course Code: ECE204

L	T	P	Credits
0	0	2	1

Course Objectives: To reinforce learning in the accompanying ECE-201 course through hands-on experience with digital electronic circuit analysis, design, construction, and testing. To provide the student with the capability to use simulation tools in digital electronic circuit analysis and design.

Learning Outcomes: To develop necessary skill in designing, analysing and constructing digital electronic circuits.

List of Experiments

1. Verification of the truth tables of TTL gates, e.g., 7400, 7402, 7404, 7408, 7432, 7486.
2. Verify the NAND and NOR gates as universal logic gates.
 - a) Verification of the truth table of the Multiplexer 74150.
 - b) Verification of the truth table of the De-Multiplexer 74154.
3. Design and verification of the truth tables of Half and Full adder circuits.
4. Design and verification of the truth tables of Half and Full subtractor circuits.
5. Design and test of an S-R flip-flop using NOR/NAND gates.
 - a) Verify the truth table of a J-K flip-flop (7476)
 - b) Verify the truth table of a D flip-flop (7474)
6. Operate the counters 7490, 7493 and 74194. Verify the frequency division at each stage and with a low frequency clock (say 1 Hz) display the count on LEDs.
7. Verify the truth table of decoder driver 7447/7448. Hence operate a 7 segment LED display through a counter using a low frequency clock.
8. Repeat the above with the BCD to Decimal decoder 7442 and an array of LEDs
9. Design and test D/A converter using R-2R Ladder Network
10. Study and test of A/D converter.

DAV UNIVERSITY, JALANDHAR

Course Title: System Programming
Course Code: CSE204

L	T	P	Credits
3	1	0	3

Course Objective: The objective of this course is to provide the knowledge of one high level procedural language, assembly language and computer organization.

Learning Outcomes: After the completion of this course the participants would gain the knowledge to design various system programs.

PART-A

Introduction to System Programming

Definition of System Programming, Features of System Programming, System Programming v/s Application Programming, Types of System softwares.

Assemblers

Elements of Assembly Language Programming, Single pass assembler, two pass assembler and design procedure of an assembler.

(10 Hours)

PART-B

Macros and Macro Processors

Macro Instructions, Features of a Macro facility, Implementation of Two pass Macro.

Compilers

Aspects of Compilation, Compiler v/s Interpreter. Phases of compilation, Scanning and Parsing, Compilation of Expressions, Compilation of Control Structures Code Generation and Code Optimization Techniques, CompilerWritingTools (Case study on LEX and YACC.)

(13 Hours)

PART-C

Loaders & Linkage Editors

Loading, Linking and Relocation, Types of loaders, Detailed Linking and Loading process in memory.

Editors and debuggers

Introduction to Editors, Types of Editors, Structure of an Editor, Debug monitors, Introduction to various debugging techniques, Turbo C++ Debuggers.

(12 Hours)

PART-D

Grammar and automation

Introduction to grammar, types of grammar, acceptability of grammar, introduction to automation, characteristics of automation, finite control, transition system, finite automation.

(10 Hours)

Course Title: Data Communication

Course Code: CSE206

L	T	P	Credits
3	1	0	3

Course Objective: This course provides knowledge about various types of Network, Network Topologies, and protocols.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of how a network works during data communication.

PART-A

Introduction

Data Communication: Components, Data Flow; Network Categories: LAN, MAN, WAN (Wireless / Wired); Network Software: Concept of layers, protocols, interfaces and services; Reference Model: OSI, TCP/IP and their comparison.

Physical Layer

Concept of Analog & Digital Signal; Bit rate, Bit Length; Transmission Impairments: Attenuation, Distortion, Noise; Data rate limits: Nyquist formula, Shannon Formula; Multiplexing: Frequency Division, Time Division, Wavelength Division; Transmission media: Twisted pair, coaxial cable, fiber optics, wireless transmission (radio, microwave, infrared); Circuit Switching & Packet Switching.

(14Hours)

PART-B

Data Link Layer

Error correction & Detection; Flow & Error Control; Sliding window protocols: Stop & Wait ARQ, Go back n ARQ, Selective repeat ARQ; Examples of DLL Protocols-HDLC, PPP; Medium Access Sub layer: Channel Allocation; Random Access: ALOHA, CSMA protocols; Controlled Access: Polling, Reservation, Token Passing; Examples of IEEE 802.3, 802.11 standards.

(10Hours)

PART-C

Network Layer: Logical Addressing: IPv4 and IPv6; Packet Formats & their comparison: IPv4 and IPv6; Routing algorithms: Distance vector, Link State Routing, Hierarchical Routing, Broadcast & Multicast Routing; Congestion Control: Principles of Congestion Control, Congestion prevention policies, Leaky bucket & Token bucket algorithms.

(10Hours)

PART-D

Transport Layer

Addressing, flow control & buffering, multiplexing & de-multiplexing, crash recovery; Example transport protocols: TCP, SCTP and UDP.

Application Layer: Network Security; Domain Name System; Simple Network Management Protocol; Electronic Mail.

DAV UNIVERSITY, JALANDHAR

Course Title: Operating System Concepts
Course Code: CSE224

L	T	P	Credits
4	0	0	4

Course Objective: This course should provide the students with good understanding of Operating System including its architecture and all its components.

Learning Outcomes: After the completion of this course the participants would understand the overall architecture of the operating system and its main components, Functions of Kernel, file system architecture and implementation, concurrent programming and concurrency.

PART-A

Introduction

What is an O.S., O.S. Functions; Different types of O.S.: batch, multi-programmed, time sharing, real-time, distributed, parallel; General structure of operating system, O/S services, system calls.

Process Management

Introduction to processes - Concept of processes, process scheduling, Process Control Block, operations on processes; Inter Process Communication, Critical Sections, Semaphores, Message passing; CPU scheduling- scheduling criteria, preemptive & non-preemptive scheduling, Scheduling Algorithms(FCFS, SJF, RR and priority).

(15Hours)

PART-B

Memory Management

Background, logical vs. physical address space, swapping; contiguous memory allocation, internal & external fragmentation, memory compaction, paging, segmentation, Virtual Memory, demand paging, page replacement, page replacement algorithms (FIFO, Optimal ,LRU); Thrashing.

(6Hours)

PART-C

File Systems

Files - file concept, file structure, file types, access methods, File attributes, file operations; directory structure, allocation methods (contiguous, linked, indexed), free-space management (bit vector, linked list, grouping),Protection mechanisms.

Secondary Storage

Disk Structure, Disk Scheduling (FCFS, SSTF, SCAN, C-SCAN, and LOOK).

(13Hours)

PART-D

Deadlocks

Introduction to deadlocks, Conditions for deadlock, Resource allocation graphs, Deadlock Detection and Recovery, Deadlock Avoidance, Deadlock Prevention

Case Studies

Brief introduction of MS-DOS, Windows(9x,XP,2000), UNIX and LINUX

(14Hours)

Course Title: Microprocessor & its Applications
Course Code: ECE350

L	T	P	Credits
4	0	0	4

Course Objectives: The purpose of this course is to teach students the fundamentals, internal architectural details and functioning of microprocessors systems. The student will be able to incorporate these concepts into their electronic designs for other courses where control can be achieved via a microprocessor implementation.

Learning Outcomes: Through the use of assembly language, by the end of the course students will become thoroughly familiar with the elements of microprocessor software and hardware. They will be able to:

- Understand fundamental operating concepts behind microprocessors.
- Appreciate the advantages in using microprocessors in engineering applications.
- Design microprocessor based solutions to problems.

PART-A

Introduction

Introduction to Microprocessors, classification, recent microprocessors.

Microprocessor Architecture

8085 microprocessor Architecture. Bus structure, I/O, Memory & System buses, concept of address Bus, Data Bus & Control Bus, Synchronous & Asynchronous buses. Instruction execution sequence & Data Flow, Instruction cycle.

(14Hours)

PART-B

I/O memory interface

Data transfer modes: Programmable, interrupt initiated and DMA 8257, Serial & parallel interface, study of 8251 & 8255 programmable peripheral interfaces.

(14Hours)

PART-C

Instruction set & Assembly Languages Programming

Introduction, instruction & data formats, addressing modes, status flags, 8085 instructions, Data transfer operations, Arithmetic operations, Logical operations, Branch operations.

(14Hours)

Part-D

Case structure & Microprocessor application

Interfacing of keyboards and seven segment LED display, Microprocessor controlled temperature system (MCTS), Study of traffic light system, stepper motor controller.

Basic architecture of higher order microprocessor

Basic introduction to 8086, Architecture, Segmentation & addressing modes.

(14Hours)

Course Title: Engineering Mathematics-III
Course Code: MTH252A

L	T	P	Credits
4	0	0	4

Course Objective:

The objective of the course is to enable the students to understand the basic concepts related to Laplace transforms, Fourier series, ordinary differential and partial differential equations and their applications.

PART-A

Laplace Transforms

Laplace transforms of various standard functions, Linear property of Laplace transforms, Shifting property and change of scale, inverse Laplace transforms, transform of derivatives and integrals, Laplace transform of unit step function, impulse function, periodic functions, applications to solution of ordinary linear differential equations with constant coefficients, and simultaneous differential equations.

(14Hours)

PART-B

Fourier series

Periodic functions, Euler's formula. Dirichlet's conditions. Fourier series of discontinuous functions. Fourier series of Even and Odd functions, half range expansions, Fourier series of different wave forms, Complex form of Fourier series. Fourier Transformation.

(14Hours)

PART-C

Partial Differential Equations

Formulation of partial differential equations, Linear partial differential equations, homogeneous partial differential equations with constant coefficients. Wave equation and Heat conduction equation in one dimension. Two dimensional Laplace equation and their applications, solution by the method of separation of variables.

(14Hours)

PART-D

Functions of Complex Variable

Limits, continuity and derivative of the function of complex variable, Analytic function, Cauchy-Riemann equations, conjugate functions, and harmonic functions.

Conformal Mapping

Definition, standard transformations, translation, rotation, inversion, bilinear.

Complex Integration

Line integrals in the complex plane, Cauchy's theorem, Cauchy's integral formula and derivatives of analytic function. Taylor's and Laurent's expansions (without proofs), singular points, poles, residue, Integration of function of complex variables using the method of residues.

(14Hours)

Course Title: System Programming Laboratory
Course Code: CSE218

L	T	P	Credits
0	0	2	1

List of Experiments

1. Design and Implementation of an Editor in any language.
2. Design and Implementation of Pass1 of Two Pass Assembler in any language.
3. Design and Implementation of Pass2 of Two Pass Assembler in any language.
4. Design and Implementation of One Pass Assembler in any language.
5. Design and implementation of Symbol Table(create, insert, delete, search, modify functions)
6. Implementation of Lexical Analyzer.
7. Implementation of Parser in any language.
8. Design and Implementation of Two Pass Macro- Processor.
9. Programming using LEX and YACC.
10. Design and Implementation of a Loader.

This is only the suggested list of practical. Instructor may frame additional practical relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Operating Systems Concepts Laboratory

Course Code: CSE226

L	T	P	Credits
0	0	4	2

List of Experiments

1. Simulation of the CPU scheduling algorithms
a) Round Robin b) SJF c) FCFS d) Priority
2. Simulation of MUTEX and SEMAPHORES.
3. Simulation of Bankers Deadlock Avoidance and Prevention algorithms.
4. Implementation of Process Synchronization (Reader-Writer, Sleeping Barber and Dining Philosopher's Problem)
5. Simulation of page Replacement Algorithms a) FIFO b) LRU c) LFU
6. Simulation of paging techniques of memory management.
7. Simulation of file allocation Strategies a) Sequential b) Indexed c) Linked
8. Simulation of file organization techniques
a) Single Level Directory b) Two Level c) Hierarchical d) DAG
9. To automate the allocation of IP addresses i.e. to set and configure the DHCP server and DHCP client.
10. Basic Introduction to Linux Operating System and Shell scripting.
11. To share files and directories between RedHat Linux operating systems i.e. to set and configure the NFS server and NFS clients.

This is only the suggested list of Practicals. Instructor may frame additional Practicals relevant to the course contents.

DAV UNIVERSITY, JALANDHAR

Course Title: Microprocessor & its Applications Laboratory
Course Code: ECE351

L	T	P	Credits
0	0	2	1

Course Objective: This laboratory will provide the students a perfect introduction to the world of Microprocessors and to provide hands-on experience essential to the real understanding of microprocessors architecture and it's interfacing to the peripheral devices. The experiments are designed to provide the students with the design principles of microprocessor systems. The course accomplishes this by using microprocessor kits.

Learning Outcome: After successful completion of this course, student will be able:

- To demonstrate programming proficiency using the various addressing modes and data transfer instructions of the target microprocessor.
- To apply knowledge of the microprocessor's internal registers and operations by use of a PC based microprocessor simulator.
- To interface the processor to external devices.

List of Experiments:

1. Introduction to 8085 kit.
2. Addition of two 8 bit numbers, sum 8 bit.
3. Subtraction of two 8 bit numbers.
4. Find 1's complement of 8 bit number.
5. Find 2's complement of 8 bit number.
6. Shift an 8 bit no. by one bit.
7. Find Largest of two 8 bit numbers.
8. Find Largest among an array of ten numbers (8 bit).
9. Sum of series of 8 bit numbers.
10. 8255 PPI.
11. Seven segment display
12. Traffic light.
13. Stepper motor control

DAV UNIVERSITY, JALANDHAR

Course Title: Data Communication Laboratory
Course Code: CSE220

L	T	P	Credits
0	0	2	1

List of Experiments

1. Making Straight, Rollover and Cross-Over cables
2. Cable & RJ-45 Jack outlet installation
3. Installation of NIC Card & using TCP/IP
4. Design, build & test a simple communication system
5. Overview and basic Configuration of Router
6. Router show Command
7. Basic LAN Setup
8. Designing & Implementing LAN using sub netting
9. Study of Amplitude Modulation
10. Study of frequency Modulation
11. Study of ASK Modulation
12. Study of FSK Modulation
13. Simple point-to-point communication & error detection
14. Implementation of STOP and Wait protocol
15. Implementation of Sliding Window protocol

This is only the suggested list of practicals. Instructor may frame additional practicals relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Networks
Course Code: CSE301

L	T	P	Credits
3	0	0	3

Course Objective: This course should provide the knowledge of various networking components, protocols and their working.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of how to implement a network and understand the functioning of the network.

PART-A

Introduction

Introduction to Computer Network and Physical Layer, Broadcast and Point-to-point- LAN-MAN-WAN- Wireless networks

Architecture and Reference Models

Layered architecture- OSI reference model, TCP/IP reference model –Internet Protocol Stack – Network Entities in Layers- Connection oriented and Connection less services

ATM

Protocol Architecture, ATM Logical Connections, ATM Cells, Transmission of ATM Cells, ATM Adaptation Layer, Traffic and Congestion Control, ATM LAN Emulation

(12Hours)

PART-B

Internetworking

Principles of Internetworking, Connectionless Internetworking, the Internet Protocol, Routing Protocol, IPv6 (IPng), ICMPv6

Distributed Applications

Abstract Syntax Notation One (ASN.1), Network Management-SNMPV2, Electronic Mail-SMTP and MIME, Uniform Resource Locators (URL) and Universal Resource Identifiers (URI), Hypertext Transfer Protocol (HTTP)

(8Hours)

PART-C

Network Layer and Routing

Network Service model – Datagram and Virtual circuit service-Routing principles-Link state routing-distant vector routing-hierarchical routing-multicast routing-IGMP Internet Protocol (IP): IPv4 addressing-routing and forwarding datagram-datagram format-datagram fragmentation- ICMP- DHCP- Network Address Translators (NATs)-IPv6 packet format-transition from IPv4 to IPv6-Mobile IP. Routing in the Internet: Intra Autonomous System Routing: RIP and OSPF-Inter Autonomous System Routing: BGP – Network layer in ATM.

(8Hours)

PART-D

Transport Layer

Transport Layer Services-Relationship between Transport Layer and Network Layer-Transport Layer in Internet-Multiplexing and De multiplexing. Connectionless Transport: UDP-Segment structure-Checksum Connection Oriented Transport: TCP-TCP connection-TCP Segment Structure-Round trip Time estimation and Time out-Reliable Data transfer-Flow control-TCP connection Management. Congestion Control: Causes and costs of congestion-Approaches to congestion control- TCP congestion control: Fairness-TCP delay modeling. ATM ABR congestion control.ATM AAL Layer protocols.

(8Hours)

DAV UNIVERSITY, JALANDHAR

Application Layer and Network Security: Application Layer Protocols - WWW and HTTP-File transfer Protocol: FTP Commands and Replies – Domain Name System (DNS)- SMTP - SNMP-multimedia. Remote Procedure Call. Security in Computer Networks: Principles of Cryptography-Symmetric key-Public key-authentication protocols -Digital Signatures – Firewalls. Security in different Layers: Secure E-mail- SSL – IP security.

Course Title: Database Management System
Course Code: CSE303

L	T	P	Credits
4	0	0	4

Course Objective: This course offers a good understanding of database systems concepts and prepares the student to be in a position to use and design databases for different applications.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of how to use a DBMS and how to build a DBMS.

PART-A

Introduction to Database Systems: Introduction and applications of DBMS, Purpose of database, Data Independence, Database System architecture- levels, Mappings, Database users and DBA, File Systems Versus a DBMS, Advantages of a DBMS, DBMS Layers, Data independence.

(10 Hours)

PART-B

Data Models

Relational Model, Network Model, Hierarchical Model, ER Model: Entities, Attributes and Entity Sets, Relationships and Relationship Sets, Constraints, Weak Entities, Comparison of Models, Database Design with the ER Model, Keys.

(12 Hours)

PART-C

Database Design

Normalization and Normal Forms, Various dependencies in database (i.e. Functional dependencies, Multi-valued Dependency, Join Dependency, etc) First, Second and Third Normal Forms, BCNF, Fourth and Fifth Normal Forms

Transaction Management

ACID Properties, Serializability, Two-phase Commit Protocol, Concurrency Control, Lock Management, Lost Update Problem, Inconsistent Read Problem, Read-Write Locks, Deadlocks Handling, 2PL protocol and Introduction to Database Recovery and its techniques.

(14 Hours)

PART-D

Database Protection

Database Threats, Access Control Mechanisms, Grant and Revoke, Firewalls, Encryption and Digital Signatures.

PL/SQL-Concepts:

Cursors, Stored Procedures, Database Triggers

(12 Hours)

Course Title: Software Engineering

Course Code: CSE333

L	T	P	Credits
3	0	0	3

Course Objective: To understand the basic concepts of software engineering and software development life cycle.

Learning Outcomes: Students will learn about the different activities of software development and about the risk management. They will get aware about the different case tools.

PART – A

Introduction to Software Engineering:

Software Problem, Software Engineering, Approach, Software process, Characteristics of Software Engineering Process, Software Applications, Software Crisis: Problem and Causes.

Software Development Life Cycle:

The waterfall model, Incremental process models, Evolutionary process models, Spiral Model.

Requirements engineering process:

Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management.

(10Hours)

PART – B

Software Requirements:

Functional and non-functional requirements, User requirements, System requirements, Interface specification, documenting Software Requirement Specification (SRS).

Software Project Planning:

Cost estimation, cost estimation models, Project scheduling, Software Configuration management, Team Structure, Risk Management.

System models:

Context Models, Behavioural models, Data models, Object models, structured methods

Design Engineering:

Design Concepts, design models for architecture, component, data and user interfaces; Problem Partitioning, Abstraction, Cohesiveness, Coupling, Top Down and Bottom Up design approaches; Functional Versus Object Oriented Approach, Design Specification, 4GL.

(10Hours)

PART – C

Creating an architectural design:

Software architecture, Data design, Architectural styles and patterns, Architectural Design

Object-Oriented Design:

Objects and object classes, An Object-Oriented design process, Design evolution.

Performing User interface design:

Golden rules, User interface analysis and design, interface analysis, interface design steps, Design evaluation

Coding and Testing Strategies:

Code reviews, A strategic approach to software testing, test strategies for conventional software, Black-Box and White-Box testing, Validation testing, System testing, the art of Debugging

Product metrics:

Software Quality, Metrics for Analysis Model, Metrics for Design Model, Metrics for source code, Metrics for testing, Metrics for maintenance.

DAV UNIVERSITY, JALANDHAR

Metrics for Process and Products:

Software Measurement, Metrics for software quality.

(10Hours)

PART – D

Risk Management:

Reactive vs. Proactive Risk strategies, software risks, Risk identification, Risk projection, Risk refinement.

Quality Management:

Quality concepts, Software quality assurance, Software Reviews, Formal technical reviews, Statistical Software quality Assurance, Software reliability, The ISO 9000 quality standards.

CASE Tools:

Types of CASE tools, advantages and components of CASE tools, Unified Modelling Language (UML)

DAV UNIVERSITY, JALANDHAR

Course Title: Algorithm Design & Analysis

Course Code: CSE307

L	T	P	Credits
4	0	0	4

Course Objective: The subject will give an insight into performance analysis, measurements and optimization of the various algorithm development techniques.

Learning Outcomes: After the completion of this course the participants will be able to choose one algorithm technique for any kind of problem.

PART-A

Introduction

Concept of Algorithm, Role of Algorithms in Computing, Algorithm Specification, Performance Analysis (Time and space complexities), and Growth of functions: Asymptotic Notation, Standard notation & common functions; Introduction to Recurrences: substitution method, recursion-tree method, master method; Randomizing Algorithms.

Divide and Conquer

General Method, Binary Search, Merge sort, Quick sort, Selection sort.

(14Hours)

PART-B

Greedy Algorithms

Elements of Greedy strategy, Activity Selection Problem, Knapsack problem, Minimum Cost Spanning Trees (Prim's Algorithm, Kruskal's Algorithm), Single source Shortcut paths problem and analysis of these problems.

(12 Hours)

PART-C

Dynamic Programming

Elements of dynamic programming, Assembly-line scheduling problem, Matrix-chain multiplication, Multistage Graph, All Pairs Shortest paths, Longest common subsequence, 0/1 Knap Sack and Travelling Salesman Problem.

(12 Hours)

PART-D

Back Tracking

General method, 8 queen's problem, Graph coloring and Hamiltonian Cycles, 0/1 Knap Sack Problem

NP-Completeness

Polynomial Time, polynomial-time verification, NP-completeness & reducibility, NP-complete problems

(12 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Graphics

Course Code: CSE335

L	T	P	Credits
3	1	0	3

PART -A

Introduction

Introduction, Application areas of Computer Graphics, overview of graphics systems, video-display devices, and raster-scan systems, random scan systems, graphics monitors and work stations and input devices.

Scan Conversion

Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms. Filled area primitives: Scan line polygon fill algorithm, boundary-fill and flood-fill algorithms

(10 Hours)

PART- B

Two dimensional transformations

Translation, rotation, scaling, reflection and shear transformations, composite transformations

Two dimensional viewing and Clipping

The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland – Hodgeman polygon clipping algorithm

Three dimensional transformations

Geometric transformations, shear transformations, composite transformations.

Projections: Perspective Projection and Parallel projection

Three dimensional Viewing: Three dimensional Viewing, clipping, Viewing transformations.

(15 Hours)

Part C

Curve and Surface design

Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-Spline curves, Bezier and B-Spline surfaces

Hidden Surfaces

Z-Buffer algorithm, back-face detection, scan-line, The Painter's algorithm, area sub-division
Rendering of mathematical surfaces

(10 Hours)

Part D

Color and Shading models

Introduction to shading models- Light and Color, The Phong model, Interpolative shading models, Texture, Ray tracing

(5 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Networks Laboratory
Course Code: CSE319

L	T	P	Credits
0	0	2	1

List of Experiments

1. Introduction to Network Simulator OPNET/NS2.
2. Evaluate Ethernet Delay and Load Statics of Switched Ethernet
3. Evaluate the comparative investigations on the performance issues of switched Ethernet with VLAN based on Email and FTP applications.
4. Evaluate Internet connection choice for PC Network on different Data Rate for WAN based on Web Browsing and Email application
5. Implementation of Firewall; in a Network.
6. Simulation of Wireless data Network with different with physical characteristics.
7. Implementation of CSMA/CD Protocol and its comparative investigation with ALOHA Protocol.
8. Design and Implementation of Simple Transfer Protocol in C/ C++.
9. Design of substitution Cipher in C/ C++.
10. Design of Transposition Cipher in C/ C++.
11. Design of Public Key Algorithm in C/ C++.

DAV UNIVERSITY, JALANDHAR

Course Title: Database Management System Laboratory
Course Code: CSE321

L	T	P	Credits
0	0	4	2

List of Experiments

1. Introduction to SQL and its Data Types.
2. Write the queries for Data Definition and Data Manipulation language.
3. Write SQL queries using Logical operators (=, <, >, etc.).
4. Write SQL queries using SQL operators (Between, AND, IN (List), Like, ISNULL and also with negating expressions).
5. Write SQL query using character, number and group functions.
6. Write SQL queries for Relational Algebra (UNION, INTERSECT, and MINUS, etc.).
7. Write SQL queries for extracting data from more than one table (Equi-Join, Non-Equi-Join , Outer Join)
8. Write SQL queries for sub queries, nested queries(using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET)
9. Concepts for ROLL BACK, COMMIT & CHECK POINTS.
10. Creation, altering and dropping of tables and inserting rows into a table (use constraints while creating tables) examples using SELECT command.
11. Queries (along with sub Queries) Constraints. Example: - Select the roll number and name of the student who secured fourth rank in the class.
12. Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING clauses.
13. Queries using Conversion functions (to_char, to_number and to_date), string functions (Concatenation, lpad, rpad, ltrim, rtrim, lower, upper, initcap, length, and substr), date functions (Sysdate, next_day, add_months, last_day, months_between, least, greatest, trunc, round, to_char, to_date)
14. Create Views, Cursors, And Triggers and Stored Procedures in PL/SQL.

* Students are advised to use Developer 2000/Oracle-10i or higher version or other latest version for above listed experiments. This is only the suggested list of Practicals. Instructor may frame additional Practicals relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Computer graphics Lab

Course Code: CSE337

L	T	P	Credits
0	0	4	2

List of Experiments

1. To draw a line using DDA Algorithm.
2. To draw a line using Bresenham's Algorithm.
3. To draw a circle using trigonometric Algorithm.
4. To draw a circle using Bresenham's Algorithm.
5. To draw a circle using Midpoint Algorithm.
6. To draw an ellipse using Trigonometric Algorithm.
7. To draw an ellipse using Midpoint Algorithm.
8. To translate an object with translation parameters in X and Y directions.
9. To scale an object with scaling factors along X and Y directions.
10. To rotate an object with a certain angle.
11. To perform composite transformations of an object.
12. To clip line segments against windows.
13. Demonstrate the properties of Bezier Curve.

This is only the suggested list of programs. Instructor may frame additional Practicals relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Theory of Computation
Course Code: CSE302

L	T	P	Credits
4	0	0	4

Course Objective: To understand the basic concepts of grammar, automata, languages and expressions.

Learning Outcomes: Students will learn about all three theories of computer science – automata, formal languages and computation.

PART- A

Sets, Relations and Languages: Sets, Relations and functions, finite and infinite sets, Closures and algorithms, alphabets and languages

Finite Automata: Finite automata and its applications, Deterministic Finite Automata (DFA), Non Deterministic Finite Automata (NFA), Conversion of NFA to DFA, Moore and Mealy Machine, Conversion from Mealy to Moore and Moore to Mealy.

(12 Hours)

PART- B

Grammar: Definition of Grammars, Derivation & Language generated by Grammars, Chomsky Classification of Languages

Regular Expression and Languages: Regular expression, finite Automata and Regular expression, Properties of Regular Languages, Pumping lemma for regular languages, application of pumping lemma, Closure properties of regular languages, Minimization of finite Automata.

(14 Hours)

PART-C

Context free Grammar and Languages: Context free grammar: Parse Trees, Ambiguity in Grammar and Languages, Construction of Reduced Grammars

Properties of Context free languages – Normal forms for Context Free Grammars, Chomsky Normal Form (CNF), and Greibach Normal Form (GNF)

(12 Hours)

PART- D

Pushdown Automata: Pushdown Automata: Deterministic Push down Automata, Equivalence of Push Down automata and Context free Grammar.

Turing Machines: Definition of Turing Machine, Application of Turing Machine in language accepting and computing.

(12 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Data Mining
Course Code: CSE312

L	T	P	Credits
3	1	0	3

Course Objective: This course will be an introduction to data mining. Topics will range from statistics to database, with a focus on analysis of large data sets. Another objective is to study the methodology of engineering legacy databases for data warehousing and data mining to derive business rules for decision support systems.

Learning Outcomes: Upon completion of the course, students will be able to:

- Describe the theoretical constructs and core processes of data mining
- Understand the role of data mining in institutional research.
- Understand the basic statistical concepts related to data mining.
- Describe the predictive modelling functions of data mining.

PART-A

Introduction: Data Mining Concepts, Input, Instances, Attributes and Output, Knowledge Representation & Review of Graph Theory, Lattices, Probability & Statistics

Machine learning concepts and approaches: Supervised Learning Framework, concepts & hypothesis, Training & Learning, Boolean functions and formulae, Monomials, Disjunctive Normal Form & Conjunctive Normal Form, A learning algorithm for monomials

(12Hours)

PART-B

Data Preparation: Data Cleaning, Data Integration & Transformation, Data Reduction

Mining Association Rules: Associations, Maximal Frequent & Closed Frequent item sets, Covering Algorithms & Association Rules, Linear Models & Instance-Based Learning, Mining Association Rules from Transactional databases, Mining Association Rules from Relational databases & Warehouses, Correlation analysis & Constraint-based Association Mining.

(12Hours)

PART-C

Classification and Prediction: Issues regarding Classification & Prediction, Classification by Decision Tree induction, Bayesian classification, Classification by Back Propagation, k-Nearest Neighbour Classifiers, Genetic algorithms, Rough Set & Fuzzy Set approaches

Cluster Analysis: Types of data in Clustering Analysis, Categorization of Major Clustering methods, Hierarchical methods, Density-based methods, Grid-based methods, Model-based Clustering methods

(12Hours)

PART-D

Mining Complex Types of Data: Multidimensional analysis & Descriptive mining of Complex data objects, Mining Spatial Databases, Mining Multimedia Databases, Mining Time-series & Sequence data, Mining Text databases, Mining World -Wide Web

Data Mining Applications and Trends in Data Mining: Massive Datasets/Text mining, Agent-Based Mining

DAV UNIVERSITY, JALANDHAR

Course Title: Technical Communication
Course Code: ENG351

L	T	P	Credits
4	0	0	4

Total Lectures: 45

Course Objective: This paper, with a practice-oriented approach, aims to hone students' skills in all the dimensions of technical communication.

Learning Outcomes: Students will show adequate understanding of technical communication skills.

Unit-1

- Nature of Technical Communication
- Verbal and Non-Verbal Communication
- Barriers to Communication

Unit-2

- Conversation: Formal and Informal
- Sounds of English (Speech Skills)
- Panel Discussion and Group Discussion
- Oral Presentation

Unit-3

- Report Writing
- Business and Technical Proposals
- Memos

Unit-4

- C.V. and Resume
- Business Letters and Application Letters
- Interview

Suggested Readings

DAV UNIVERSITY, JALANDHAR

Course Title: DISTRIBUTED SYSTEMS
Course Code: CSE310

L	T	P	Credits
3	0	0	3

Course Objective: The course is intended to provide basic foundation with fundamental concepts and mechanisms of distributed computing systems. Most of the issues discussed in this course material are the essence of advanced operating systems. Broad coverage as: Introduction to distributed computing systems (DCS) DCS design goals, Transparencies, Fundamental issues, Distributed Coordination, Process synchronization, Inter-process communication.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of the working distributed system and finally the student will be exposed to the recent trends in distributed computing systems and multithreaded application.

Part-A

Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges.

System Models: Architectural models, Fundamental Models

Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport's & vectors logical clocks, Causal ordering of messages, global state, and termination detection.

(10Hours)

Part-B

Distributed Mutual Exclusion: Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and non-token based algorithms.

Distributed Deadlock Detection: System model, resource Vs communication deadlocks, deadlock prevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms.

Agreement Protocols: Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem, Interactive consistency Problem, Solution to Byzantine Agreement problem, Application of Agreement problem, Atomic Commit in Distributed Database system.

(11Hours)

Part-C

Distributed Objects and Remote Invocation: Communication between distributed objects, Remote procedure call, Events and notifications, Java RMI case study.

Security: Overview of security techniques, Cryptographic algorithms, Digital signatures, Case studies: Needham Schroeder, Kerberos.

Distributed File Systems: File service architecture, Sun Network File System, The Andrew File System.

(10Hours)

Part-D

Distributed Transactions: Flat and nested distributed transactions, Atomic Commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery.

Replication: System model and group communication, Fault -tolerant services, highly available services, Transactions with replicated data.

CORBA Case Study: CORBA RMI, CORBA services.

(10Hours)

Course Title: Object Oriented Analysis & Design

Course Code: CSE336

L	T	P	Credits
3	0	0	3

Course Objective: This Course introduces the object oriented design and modelling. It provides the various diagrams to represent and design the various systems.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of the various models and diagrams to design the system blueprints.

Part-A

Object Oriented Design and Modelling: Object Oriented Fundamentals, Objects and object classes, object oriented design process, importance of modelling, principles of modelling, object oriented modelling.

Introduction to UML: Conceptual model of UML, building blocks of UML, Mechanisms in UML, architecture, software development life cycle.

(12Hours)

Part-B

Basic Structural Modelling: Classes, relationships, common mechanisms, class and object diagrams.

Advanced structural Modelling: Advanced classes, advanced relationships, Interfaces types and roles, packages, instances and object diagrams.

(12Hours)

Part-C

Collaboration Diagrams and Sequence Diagrams: Terms, concepts and depicting a message in collaboration diagrams. Terms and concepts in sequence diagrams. Difference between collaboration and sequence diagram. Depicting synchronous messages with/without priority call back mechanism.

Basic behavioral modelling: Interactions, use cases, Use Case Diagrams, Interaction Diagrams and activity diagrams.

(12Hours)

Part-D

Advanced behavioral modelling: Events and signals, state machines, process and threads, time and space, state chart diagrams.

Architectural Modelling: Terms, Concepts, examples, Modelling techniques for component diagrams and deployment diagrams.

(10 Hours)

REFERNECES:

1. GradyBooch, James Rumbough, Ivar Jacobson. ' The Unified Modelling Language User Guide.PearsonEdutaion 2002.

DAV UNIVERSITY, JALANDHAR

Course Title: Object Oriented Analysis & Design Lab

Course Code: CSE338

L	T	P	Credits
0	0	2	1

OBJECTIVES:

- To learn basic OO analysis and design skills through an elaborate practical applications.
- To use the UML design diagrams
- To apply the appropriate design patterns

List of Experiments

1. Develop an IEEE standard SRS document.
2. Develop risk management and project plan (Gantt chart).
3. Identify Use Cases and develop the Use Case model.
4. Identify the business activities and develop an UML Activity diagram.
5. Identify the conceptual classes and develop a domain model with UML Class diagram.
6. Using the identified scenarios find the interaction between objects and represent them using UML Interaction diagrams.
7. Draw the State Chart diagram.
8. Draw Component and Deployment diagrams
9. Draw a scenario making use of Sequence diagram, Package diagram, and State Chart diagram.

DAV UNIVERSITY, JALANDHAR

Course Title: DATA MINING LAB

Course Code: CSE324

L	T	P	Credits
0	0	4	2

Students are required to perform practicals in Oracle/MS SQL Server and STATISTICA Data Miner

List of Experiments

1. Building a Database Design using ER Modelling and Normalization Techniques
2. Implementation of functions, Procedures, Triggers and Cursors
3. Load Data from heterogeneous sources including text files into a predefined warehouse schema.
4. Feature Selection and Variable Filtering (for very large data sets)
5. Association mining in large data sets
6. Interactive Drill-Down, Roll up, Slice and Dice operations
7. Generalized EM & k-Means Cluster Analysis
8. General Classification

DAV UNIVERSITY, JALANDHAR

Course Title: System Simulation & Modelling
Course Code: CSE401

L	T	P	Credits
3	1	0	3

Course Objective: This Course introduces the simulation systems and their modelling applications to students. This course covers the different techniques of Simulation, General principles and related issues.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of the various simulation technologies and their uses.

Part-A

Introduction to Simulation: System & System Environment, Components of a System, Discrete and Continuous Systems, Model of a System and Types of Models, Discrete Event System Simulation, Advantages and Disadvantages of Simulation, Areas of Application
Techniques of Simulation: Monte Carlo Method, Types of System Simulations, Real Time Simulation, Stochastic Variables, Discrete Probability Functions.

(10 Hours)

Part-B

General Principles: Concepts in Discrete Event Simulation, Event Scheduling /Time Advance Algorithm, List Processing, Using Dynamic Allocation & Linked List

Simulation Software: History of Simulation Software, Selection of Simulation Software, Simulation in C++, GPSS, Simulations Packages, Trends in simulation Software.

Statistical Models in Simulation: Useful Statistical Models, Discrete Distributions, Continuous Distributions, Poisson Process, Empirical Distributions.

(10 Hours)

Part-C

Queuing Models: Characteristics of Queuing systems, Queuing Notation, Long Run Measures of performance of Queuing Systems, Steady State Behavior of infinite Population Markovian Models, Steady State Behavior of finite Population Models, Networks of Queues.

Random Number Generation: Properties of Random Numbers, Generation of Pseudo-Random Numbers, Techniques for Generating Random Numbers, Tests for Random Numbers, Inverse transform Techniques, Convolution Methods, and Acceptance –Rejection Techniques.

(9 Hours)

Part-D

Input Modeling: Data Collection, Identifying the Distribution with Data, Parameter Estimation, Chi – Square Test, Selecting Input Models with Data.

Verification & Validation of simulation Modeling: Model Building, Verification & Validation, Verification of simulation Models, Calibration & Validation of Models.

(10 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: COMPILER DESIGN
Course Code: CSE403

L	T	P	Credits
4	0	0	4

Course Objective: This course should provide the students with a fairly good concept of fundamental concepts and compiler design issues of programming languages and become familiar with major programming paradigms.

Learning Outcomes: At the end of the course the student will be able to design and implement a Simple Compiler

PART-A

Introduction and Lexical Analysis

Introduction to Compilers, Analysis of the source program, the phases of a compiler, grouping of phases, The role of the lexical analyzer, Specification of tokens, Recognition of tokens, A language for specifying lexical analyzer, Scanning Process, Regular Expressions, Finite Automaton (NFA and DFA),LEX.

(14Hours)

PART-B

Syntax analysis: CFG's, Ambiguity, top down parsing, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence grammars, LR parsers (SLR, LALR, LR), YACC.

Syntax directed definitions: Inherited and Synthesized Attributes, Dependency Graph, Bottom up & Top down evaluation of attributes, L- and S-attributed definitions.

(14 Hours)

PART-C

Type Checking -Type Systems, Specification of a simple type checker.

Run time system: Storage organization, activation tree, activation record, parameter passing, symbol table, dynamic storage allocation.

(14Hours)

PART-D

Intermediate Code Generation: Intermediate representations, translation of declarations, assignments, control flow, Boolean expressions and procedure calls.

Code Generation and Optimization: issues, basic blocks and flow graphs, register allocation, code generation, DAG representation of programs, code generation from DAG, Peep-hole optimization, code generator generators.

(14 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Information Security and Cryptography
Course Code: CSE405

L	T	P	Credits
3	0	0	3

Course Objective: The aim of this course is to provide attendees with a thorough understanding of the issues associated with the design, provision and management of security services for modern communication and information systems. Students will learn the different aspects of information and network security and you will be able to speak about a multitude of security attacks and the defensive strategies used to combat them.

Learning Outcomes: After completing this course the student should be able to:

- Describe the fundamental concepts of information system security.
- Understand the following terms: security policy, host based security, firewall, and packet filtering and intrusion detection.

PART-A

Overview: Services, Mechanisms, and Attacks, the OSI Security Architecture, a Model for Network, Security.

Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography.

Block Ciphers And The Data Encryption Standard: Simplified DES, Block Cipher Principles, The Data Encryption Standard, The Strength of DES, Differential and Linear Cryptanalysis, Block Cipher Design Principles, Block Cipher Modes of Operation.

Introduction To Finite Fields: Groups, Rings, and Fields, Modular Arithmetic, Euclid's Algorithm, Finite Fields of the Form $GF(p)$, Polynomial Arithmetic, Finite Fields of the Form $GF(2^n)$.

(10Hours)

PART-B

Advanced Encryption Standard: Evaluation Criteria for AES, The AES Cipher.

Contemporary Symmetric Ciphers: Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher.

Public-Key Encryption: Introduction to Number Theory: Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality, The Chinese Remainder Theorem, Discrete Logarithms.

Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems, the RSA Algorithm, Recommended Reading and Web Site, Key Terms, Review Questions, and Problems.

Key Management and Other Public-Key Cryptosystems: Key Management, Diffie-Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography.

(10Hours)

PART-C

Message Authentication and Hash Functions: Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions and MACs.

Hash Algorithms: MD5 Message Digest Algorithm, Secure Hash Algorithm, RIPEMD-160, and HMAC.

Digital Signatures and Authentication Protocols: Digital Signatures, Authentication Protocols, Digital Signature Standard.

(10Hours)

DAV UNIVERSITY, JALANDHAR

PART-D

Network Security Practice: Authentication Applications: Kerberos, X.509 Authentication Service, Electronic Mail Security: Pretty Good Privacy, S/MIME.

IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management,

Web Security: Web Security Considerations, Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction.

System Security: Intruders: Intruders, Intrusion Detection, Password Management, Malicious Software: Viruses and Related Threats, Virus Countermeasures, Firewalls: Firewall Design Principles, Trusted Systems.

L	T	P	Credits
0	0	2	1

List of Experiments

Implementation of the followings in any High Level Programming Language:

1. Transposition Techniques, Steganography.
2. Block Ciphers and the Data Encryption Standard
3. Random Number Generation.
4. Testing for Primarily, the Chinese Remainder Theorem
5. The RSA Algorithm.
6. Elliptic Curve Cryptography.
7. Hash Algorithms: MD5 Message Digest Algorithm, Authentication Protocols.
8. System Security: Firewalls: Firewall Design Principles

DAV UNIVERSITY, JALANDHAR

Course Title: Project
Course Code: CSE500

L	T	P	Credits
0	0	8	4

Project should include following phases:

- System Analysis and Design
- Coding - Implementation
- Testing
- a. It should be a working project
- b. Must have a future perspective
- c. The Domain of project can be from:
 - **Databases**
 - **Application software**
 - **System software**
 - **Multimedia**
 - **Web Applications, etc**
- d. A complete project report must be submitted along with softcopy of project. Project report may include Requirements of Project, Flow Chart, DFD's, Coding and Test Results.

DAV UNIVERSITY, JALANDHAR

Course Title: Image Processing & Pattern Recognition

Course Code: CSE406

L	T	P	Credits
3	1	0	3

PART A

Introduction: Digital Image- Steps of Digital Image Processing Systems-Elements of Visual Perception -Connectivity and Relations between Pixels. Simple Operations- Arithmetic, Logical, Geometric Operations. 2D Linear Space Invariant Systems - 2D Convolution - Correlation 2D Random Sequence - 2D Spectrum.

Image Transforms: 2D Orthogonal and Unitary Transforms-Properties and Examples. 2D DFT- FFT – DCT, Histogram Equalization Technique- Point Processing-Spatial Filtering-In Space and Frequency -Nonlinear Filtering-Use of Different Masks.

(14 Hours)

PART B

Image Restoration: Image Observation And Degradation Model, Circulant And Block Circulant Matrices and Its Application In Degradation Model - Algebraic Approach to Restoration-Inverse By Wiener Filtering – Generalized Inverse-SVD And Interactive Methods - Blind Deconvolution-Image Reconstruction From Projections.

Image Compression: Redundancy and Compression Models -Loss Less and Lossy. Loss Less-Variable-Length, Huffman, Arithmetic Coding - Bit-Plane Coding, Loss Less Predictive Coding Lossy Transform (DCT) Based Coding, JPEG Standard - Sub Band Coding.

(14 Hours)

PART C

Image Segmentation: Edge Detection - Line Detection - Curve Detection - Edge Linking and Boundary Extraction,

Boundary Representation, Region Representation and Segmentation, Morphology-Dilation, Erosion, Opening and Closing. Hit and Miss Algorithms Feature Analysis

(12 Hours)

PART D

Color and multispectral image processing: Color Image-Processing Fundamentals, RGB Models, HSI Models, Relationship Between Different Models.

Pattern Recognition Representation Feature extraction and Pattern Representation, Concept of Supervised and Unsupervised Classification Introduction to Application Areas

Statistical methods for Pattern Recognition Bayes Decision Theory, Minimum Error and Minimum Risk Classifiers, Discriminant Function and Decision Boundary ,Normal Density, Discriminant Function for Discrete Features ,Parameter Estimation

DAV UNIVERSITY, JALANDHAR

Course Title: Parallel Computing

Course Code: CSE420

L	T	P	Credits
3	1	0	3

Objectives: To impart knowledge of parallel computing systems and techniques.

Learning outcome: -Student will able to find parallelism approaches and use of parallel programming.

Part-A

Introduction: Paradigms of parallel computing: Synchronous - vector/array, SIMD, Systolic; Asynchronous- MIMD, reduction paradigm. Hardware taxonomy: Flynn's classifications, Handler's classifications. Software taxonomy: Kung's taxonomy, SPMD.

(8 Hours)

Part-B

Abstract parallel computational models: Sequential model, need of alternative model, parallel computational models such as PRAM, LMCC, Hypercube, Cube Connected Cycle, Butterfly, Perfect Shuffle Computers, Tree model, Pyramid model, Fully Connected model, PRAM-CREW, EREW models, simulation of one model from another one, Sorting network, Interconnection RAMs. Parallelism approaches - data parallelism, control parallelism.

(12 Hours)

Part-C

Performance Metrics: Laws governing performance measurements. Metrics - speedups, efficiency, utilization, communication overheads, single/multiple program performances, benchmarks. Parallel Processors: Taxonomy and topology - shared memory multiprocessors, distributed memory networks. Processor organization - Static and dynamic interconnections. Embeddings and simulations.

(12 Hours)

Part-D

Parallel Programming: Shared memory programming, distributed memory programming, object oriented programming, data parallel programming, functional and dataflow programming. Scheduling and Parallelization: Scheduling parallel programs. Loop scheduling. Parallelization of sequential programs. Parallel programming support environments

DAV UNIVERSITY, JALANDHAR

Course Title: Fuzzy Logic and Neural Networks
Course Code: CSE422

L	T	P	Credits
0	0	4	2

PART -A

Neural networks characteristics, History of development in neural networks principles, Artificial neural net terminology, Model of a neuron, Topology, Learning, types of learning, Supervised, Unsupervised, Re-inforcement learning. Knowledge representation and acquisition.

(12 Hours)

PART -B

Basic Hop field model, Basic learning laws, unsupervised learning, Competitive learning, K-means clustering algorithm, Kohonen's feature maps.

(12 Hours)

PART -C

Radial basis function neural networks, Basic learning laws in RBF nets, Recurrent back propagation, Introduction to counter propagation networks, CMAC network, and ART networks.

Fuzzy Logic I: Basic concepts of fuzzy logic, Fuzzy Vs Crisp set, Linguistic variables, Membership functions, Operations of fuzzy sets.

(14 Hours)

PART -D

Fuzzy Logic II: Fuzzy IF-THEN rules, Variable inference techniques, De-Fuzzification, Basic fuzzy inference algorithm, Fuzzy system design, PID control, Antilock Breaking system (ABS)

(12 Hours)

ELECTIVE-I**

DAV UNIVERSITY, JALANDHAR

Course Title: Introduction to Java Programming

Course Code: CSE342

L	T	P	Credits
3	0	0	3

Course Objective: The course is an introduction to Computer Science that exposes students to the concept of computing and programming using JAVA. This course is for those with little or no programming experience. The exercises are designed to help the students get a solid grasp of declaring and using methods and also learn the fundamental concepts of object oriented programming. Students will learn to use Java technologies in the real world and write numerous programs throughout the semester to demonstrate mastery of the concepts discussed in the classroom.

Learning Outcomes: Upon successful completion of this course, students should be able to: Analyze and explain the behavior of programs involving the fundamental program, write programs that use the fundamental program constructs including standard conditional and iterative control structures, Identify and correct syntax and logic errors in short programs and they will be able to Design and implement program by using packages, interfaces, events, applets and swings. Students will also be able to handle exceptions in programs.

PART-A

Overview of Basic OO Concepts

Need for object-oriented paradigm: Agents, responsibility, messages, methods, classes and instances, class hierarchies (Inheritance), method binding, data types, variables, scope and life time of variables, arrays, operators, expressions, control statements, type conversion and casting.

Features of OOP language

Classes and objects, constructors, methods, access control, this keyword, garbage collection, Overloading methods and constructors, parameter passing, recursion, string handling, inheritance, super keyword, polymorphism- method overriding, abstract classes.

(10Hours)

PART-B

Packages:

Defining, Creating and Accessing a Package, Understanding CLASSPATH, importing packages, exploring packages – Java.io, Java.util.

Interfaces:

differences between classes and interfaces, defining an interface, implementing interface, applying interfaces, variables in interface and extending interface

Exception handling:

Concepts of exception handling, benefits of exception handling, Termination models, exception hierarchy, usage of try, catch, throw, throws and finally, built in exceptions, creating own exception sub classes.

Multithreading

Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, daemon threads, thread groups.

(15Hours)

PART-C

String Handling

The string constructors, string length, special string operations, character extraction, string comparison, searching string, modifying string, data conversion, changing the case of characters, string buffer.

DAV UNIVERSITY, JALANDHAR

I/O and Applets

I/O Basics, Reading Console Input, Writing Console Output, Reading and Writing Files, Applet Fundamentals, Applet Architecture, The HTML Applet tag, passing parameters to Applets.

User interface components

labels, button, canvas, scrollbars, text components, check box, check box groups, choices, lists panels – scroll pane, dialogs, menu bar, graphics, layout manager.

(10Hours)

PART-D

Introduction to Event Handling

labels, button, canvas, scrollbars, text components, check box, check box groups, choices, lists panels – scroll pane, dialogs, menu bar, graphics, layout manager – layout manager types – boarder, grid, flow, card and grib bag.

Networking

Basics of network programming, addresses, ports, sockets, simple client server program, multiple clients, Java .net package Packages – java.util., Database connectivity.

(12 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Network Programming

L	T	P	Credits
3	0	0	3

Course Code: CSE344

PART A

Introduction – Overview of UNIX OS – Environment of a UNIX process – Process control – Process relationships Signals – Interprocess Communication – overview of tcp/ip protocols

Introduction to Socket Programming –Introduction to Sockets – Socket address Structures – Byte ordering functions – address conversion functions – Elementary TCP Sockets – socket, connect, bind, listen, accept, read, write , close functions – Iterative Server – Concurrent Server.

PART B

Application development TCP Echo Server – TCP Echo Client – Posix Signal handling – Server with multiple clients – boundary conditions: Server process Crashes, Server host Crashes, Server Crashes and reboots, Server Shutdown – I/O multiplexing – I/O Models – select function – shutdown function – TCP echo Server (with multiplexing) – poll function – TCP echo Client (with Multiplexing)

PART C

Socket options, elementary udp sockets: Socket options – getsockopt and setsockopt functions – generic socket options – IP socket options – ICMP socket options – TCP socket options – Elementary UDP sockets – UDP echo Server – UDP echo Client – Multiplexing TCP and UDP sockets – Domain name system – gethostbyname function – Ipv6 support in DNS – gethostbyadr function – getservbyname and getservbyport functions.

PART D

Advanced sockets : Ipv4 and Ipv6 interoperability – threaded servers – thread creation and termination – TCP echo server using threads – Mutexes – condition variables – raw sockets – raw socket creation – raw socket output – raw socket input – ping program – trace route program.

DAV UNIVERSITY, JALANDHAR

Course Title: Advanced Database Management System

L	T	P	Credits
3	0	0	3

Course Code: CSE346

PART-A

(12 hours)

Transaction Processing, Concurrency & Recovery Management in Centralized DBMS. Concept of Transaction and its properties, Scheduling of transactions, Conflict operations, Two Phase Locking protocol, Recovery management in Centralized DBMS.

Distributed DBMS: Concepts and design: Introduction, functions and architecture of a DDBMS, distributed relational database design, Transparencies in a DDBMS, Date's twelve rules for a DDBMS.

PART-B

(12 hours)

Advanced concepts: Distributed transaction management, distributed concurrency control, distributed deadlock management, distributed database recovery, Replication servers, and Distributed query optimization, Mobile databases.

PART-C

(12 hours)

Object-Oriented DBMS: Introduction: advanced database applications, weakness of RDBMS, storing objects in a relational database, next-generation database systems. Concepts and design: OODBMS perspectives, persistence, issues in OODBMS, advantages and disadvantages of OODBMS, Object-oriented database design.

Object relational DBMS: Introduction, third generation database manifestos, SQL8, Object oriented extensions in Oracle, Comparison of ORDBMS and OODBMS.

PART-D

(12 hours)

Web technology and DBMS: Web as a database Application Platform: Requirements for web-DBMS integration, web-DBMS architecture, advantages and disadvantages of web-DBMS approach, approaches to integrating the web and DBMS, Oracle Internet Application Server (IAS).

Data Warehousing Concepts, OLAP and Data mining: Evolution of data warehousing, data warehousing concepts, benefits and problems of data warehousing, comparison of OLTP systems and data warehousing, On-Line Analytical Processing, Introduction to data mining.

DAV UNIVERSITY, JALANDHAR

Course Title: SOFTWARE PROJECT MANAGEMENT

L	T	P	Credits
3	0	0	3

Course Code: CSE348

PART- A

(12 hours)

Conventional Software Management: The waterfall model, conventional software Management performance.

Evolution of Software Economics: Software Economics, pragmatic software cost estimation.

Improving Software Economics: Reducing Software product size, improving software processes, improving team effectiveness, improving automation, Achieving required quality, peer inspections.

The old way and the new: The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.

PART- B

(12 hours)

Life cycle phases: Engineering and production stages, inception, Elaboration, construction, transition phases.

Artifacts of the process: The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts.

Model based software architectures: A Management perspective and technical perspective.

Work Flows of the process: Software process workflows, Iteration workflows,

Checkpoints of the process: Major mile stones, Minor Milestones, Periodic status assessments.

PART- C

(12 hours)

Iterative Process Planning: Work breakdown structures, planning guidelines, cost and schedule estimating, Iteration planning process, Pragmatic planning.

Project Organizations and Responsibilities: Line-of-Business Organizations, Project Organizations, evolution of Organizations.

Process Automation: Automation Building blocks, The Project Environment.

Project Control and Process instrumentation: The seven core Metrics, Management indicators, quality indicators, life cycle expectations, pragmatic Software Metrics, Metrics automation.

Tailoring the Process: Process discriminants.

PART- D

(12 hours)

Standards: Introduction to standards - ISO 9002 and ISO 9003 - Quality system development, SO 9000 standard for software, Understanding ISO 9003 clauses, SEI model - capability Maturity model - Five levels Bootstrap method, Implementing ISO 9000, Analysis the Quality system, Documenting & Auditing quality system, ISO 9000 registration process & Accreditation System, Total Quality Management

Future Software Project Management: Modern Project Profiles, Next generation Software economics, modern process transitions. Department of Computer Science and Engineering

Case Study: The command Center Processing and Display system- Replacement (CCPDS-R)

DAV UNIVERSITY, JALANDHAR

Course Title: Shell Programming
Course Code: CSE350

L	T	P	Credits
3	0	0	3

Course Objective: To understand the basic concepts of shell programming.

Learning Outcomes: Students will learn about unix file system, C shell programming and file management.

PART- A

Introduction to UNIX: Architecture of Unix, Features of Unix , Unix Commands – PATH, man, echo, printf, script, passwd, uname, who, date, stty, pwd, cd, mkdir, rmdir, ls, cp, mv, rm, cat, more, wc, lp, od, tar, gzip.

UNIX Utilities: Introduction to unix file system, vi editor, filehandling utilities, security by file permissions, process utilities, disk utilities, networking commands, unlink, du, df, mount, umount, find, unmask, ulimit, ps, w, finger, arp, ftp, telnet, rlogin. Text processing utilities and backup utilities , detailed commands to be covered are tail, head , sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, Cpio

Introduction to Shells: UNIX Session, Standard Streams, Redirection, Pipes, Tee Command, Command Execution, Command-Line Editing, Quotes, Command Substitution, Job Control, Aliases, Variables, Predefined Variables, Options, Shell/Environment Customization.

(13Hours)

PART- B

Filters: Filters and Pipes, Concatenating files, Display Beginning and End of files, Cut and Paste, Sorting, Translating Characters, Files with Duplicate Lines, Count characters, Words or Lines, Comparing Files.

Grep: Operation, grep Family, Searching for File Content.

Sed: Scripts, Operation, Addresses, commands, Applications, grep and sed.

awk: Execution, Fields and Records, Scripts, Operations, Patterns, Actions, Associative Arrays, String Functions, String Functions, Mathematical Functions, User – Defined Functions, Using System commands in awk,

Applications, awk and grep, sed and awk.

Interactive Korn Shell: Korn Shell Features, Two Special Files, Variables, Output, Input, Exit Status of a Command, eval Command, Environmental Variables, Options, Startup Scripts, Command History, Command Execution Process.

(15Hours)

PART- C

Korn Shell Programming: Basic Script concepts, Expressions, Decisions: Making Selections, Repetition, special Parameters and Variables, changing Positional Parameters, Argument Validation, Debugging Scripts, Script Examples.

Interactive C Shell: C shell features, Two Special Files, Variables, Output, Input, Exit Status of a Command, eval Command, Environmental Variables, On-Off Variables, Startup and Shutdown Scripts, Command History, Command Execution Scripts.

(10 Hours)

PART- D

DAV UNIVERSITY, JALANDHAR

C Shell Programming: Basic Script concepts, Expressions, Decisions: Making Selections, Repetition, special Parameters and Variables, changing Positional Parameters, Argument Validation, Debugging Scripts, Script Examples.

File Management: File Structures, System Calls for File Management– create, open, close, read, write, lseek, link, symlink, unlink, stat, fstat, lstat, chmod, chown, Directory API – opendir, readdir, closedir, mkdir, rmdir, umask

(8 Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Introduction to Java Programming Lab

Course Code: CSE362

L	T	P	Credits
0	0	2	1

Objective:

To make the student learn the application of advanced object oriented concepts for solving problems.

To teach the student to write programs using advanced Java features to solve the problems

List of Experiments

1. Write a simple java program to generate Fibonacci series.
2. Write a Java program that prompts the user for an integer and then prints out all prime numbers up to that integer.
3. Write a Java program that checks whether a given string is a palindrome or not.
4. Write a Java program for sorting a given list of names in ascending order.
5. Write a simple program to implement the concept of classes, inheritance, packages and interfaces.
6. Write a java program to implement the concept of super, this keyword, method overloading and overriding and dynamic method dispatch.
7. Write a program to implement the concept of exception handling using try, catch, and throw, throws.
8. Write a simple program to create your own exception subclass.
9. Develop an applet that receives an integer in one text field, and computes its factorial Value and returns it in another text field, when the button named "Compute" is clicked.
10. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -,*, % operations. Add a text field to display the result.
11. Write a Java program for handling mouse events.
12. Write a Java program that creates three threads. First thread displays "Good Morning" every one second, the second thread displays "Hello" every two seconds and the third thread displays "Welcome" every three seconds.
13. Write a Java program to implement the concept of multithreading using runnable interface and extending thread class.
14. Write a simple program to implement the concept of socket programming in java.
15. Write a simple program to connect the Database using JDBC.

This is only the suggested list of practicals. Instructor may frame additional practical relevant to the course contents.

DAV UNIVERSITY, JALANDHAR

Course Title: Network Programming Lab
Course Code: CSE364

L	T	P	Credits
0	0	2	1

Objectives:

- To teach students various forms of IPC through Unix and socket Programming

Recommended Systems/Software Requirements:

- Intel based desktop PC with minimum of 166 MHZ or faster processor with at least 64 MB RAM and 100 MB free disk space LAN Connected
- Any flavour of Unix / Linux

1. Implement the following forms of IPC.

- a. Pipes
- b. FIFO

2. Implement file transfer using Message Queue form of IPC

3. Write a programme to create an integer variable using shared memory concept and increment the variable simultaneously by two processes. Use senphores to avoid race conditions

4. Design TCP iterative Client and server application to reverse the given input sentence

5. Design TCP iterative Client and server application to reverse the given input sentence

6. Design TCP client and server application to transfer file

7. Design a TCP concurrent server to convert a given text into upper case using multiplexing system call "select"

8. Design a TCP concurrent server to echo given set of sentences using poll functions

9. Design UDP Client and server application to reverse the given input sentence

10 .Design UDP Client server to transfer a file

11 .Design using poll client server application to multiplex TCP and UDP requests for converting a given text into upper case.

12 . Design a RPC application to add and subtract a given pair of integers

DAV UNIVERSITY, JALANDHAR

Course Title: Advance Database Management System Lab
Course Code: CSE366

L	T	P	Credits	Marks
0	0	2	1	25

Objective:

- To explore the features of a Database Management Systems
- To interface a database with front end tools
- To understand the internals of a database system

Experiments:

1. Advanced SQL
2. ER Modeling
3. Database Design and Normalization
4. Accessing Databases from Programs using JDBC
5. Building Web Applications using PHP & MySQL
6. Indexing and Query Processing
7. Query Evaluation Plans
8. Concurrency and Transactions
9. Big Data Analytics using Hadoop

DAV UNIVERSITY, JALANDHAR

Course Title: Software Project Management Lab

Course Code: CSE368

L	T	P	Credits	Marks
0	0	2	1	25

Instruction for Students: The students will be attending a laboratory session of 2 hours weekly and they have to perform the practical related to the following list.

- System Requirement Specification (SRS) and related analysis documents Design documents representing the complete design of the software system.

Use of CASE Tools:

- Analysis and design for the same problem should be done using Object-Oriented approach.
- Simple exercises in effort and cost estimation in COCOMO model.
- Application of COCOMO and Function Point (FP) model for the actual project that has been chosen.
- Familiarization of SCM tools with some public domain software.
- Familiarization of some reverse engineering tools available in the public domain.

DAV UNIVERSITY, JALANDHAR

Course Title: Shell Programming Lab

Course Code: CSE370

L	T	P	Credits	Marks
0	0	2	1	25

Instruction for Students: The students will be attending a laboratory session weekly and they have to perform the practical related to the following list.

1. a) Login to the system
b) Use the appropriate command to determine your login shell
c) Use the `/etc./password` file to verify the result of step b.
d) Use the `who` command and redirect the result to a file called `myfile1`. Use the `more` command to see the contents of `myfile1`.
e) Use the `date` and `who` commands in sequence (in one line) such that the output of `date` will display on the screen and the output of `who` will be redirected to a file called `myfile2`. Use the `more` command to check the contents of `myfile2`.
- 2) a) Write a `sed` command that deletes the first character in each line in a file.
b) Write a `sed` command that deletes the character before the last character in each line in a file.
c) Write a `sed` command that swaps the first and second words in each line in a file.
3. a) Pipe your `/etc/passwd` file to `awk`, and print out the home directory of each user.
b) Develop an interactive `grep` script that asks for a word and a file name and then tells how many lines contain that word.
c) Repeat
d) Part using `awk`
4. a) Write a shell script that takes a command `-line` argument and reports on whether it is directory, a file, or something else.
b) Write a shell script that accepts one or more file name as arguments and converts all of them to uppercase, provided they exist in the current directory.
c) Write a shell script that determines the period for which a specified user is working on the system.
5. a) Write a shell script that accepts a file name starting and ending line numbers as arguments and displays all the lines between the given line numbers.
b) Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it.
6. a) Write a shell script that computes the gross salary of a employee according to the following rules:
 - i) If basic salary is < 1500 then $HRA = 10\%$ of the basic and $DA = 90\%$ of the basic.
 - ii) If basic salary is ≥ 1500 then $HRA = Rs500$ and $DA = 98\%$ of the basic. The basic salary is entered interactively through the key board.
b) Write a shell script that accepts two integers as its arguments and computers the value of first number raised to the power of the second number.

DAV UNIVERSITY, JALANDHAR

7. a) Write an interactive file-handling shell program. Let it offer the user the choice of copying, removing, renaming, or linking files. Once the user has made a choice, have the program ask the user for the necessary information, such as the file name, new name and so on.
- b) Write shell script that takes a login name as command – line argument and reports when that person logs in
- c) Write a shell script which receives two file names as arguments. It should check whether the two file contents are same or not. If they are same then second file should be deleted.
8. a) Write a shell script that displays a list of all the files in the current directory to which the user has read, write and execute permissions.
- b) Develop an interactive script that ask for a word and a file name and then tells how many times that word occurred in the file.
- c) Write a shell script to perform the following string operations:
- To extract a sub-string from a given string.
 - To find the length of a given string.
9. Write a C program that takes one or more file or directory names as command line input and reports the following information on the file:
- File type
 - Number of links
 - Read, write and execute permissions
 - Time of last access
- (Note: Use stat/fstat system calls)
10. Write C programs that simulate the following unix commands:
- mv
 - cp (Use system calls)
11. Write a C program that simulates ls Command (Use system calls / directory API)

DAV UNIVERSITY, JALANDHAR

Course Title: Web Programming

L	T	P	Credits
4	0	0	4

Paper Code: CSE427

Course Objective: Aim of this paper is to familiarize the students with current technologies used in Web development and maintenance.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of designing the web pages using different packages.

PART-A

Internet and World Wide Web

Introduction, Internet Addressing, ISP, types of Internet Connections, Introduction to WWW, WEB Browsers, WEB Servers, URLS, http, WEB applications, Tools for WEB site creation. **Html:** Introduction to HTML, Lists, adding graphics to HTML page, creating tables, linking documents, frames, DHTML and Style sheets.

(10Hours)

PART-B

Java Script

Introduction, programming constructs: variables, operators and expressions, conditional checking, functions and dialog boxes, JavaScript DOM, creating forms, introduction to Cookies

JAVA

Introduction to java objects and classes, control statements, arrays, inheritance, polymorphism, Exception handling.

(12Hours)

PART-C

XML

Why XML, XML syntax rules, XML elements, XML attributes, XML DTD displaying XML with CSS, Using XML Processors: DOM and SAX

AJAX

Introduction, HTTP request, HttpRequest, AJAX Server Script, AJAX Database. **(12Hours)**

PART-D

PHP

Introduction, syntax, statements, operators, sessions, E-mail, PHP and MySQL, PHP and AJAX.

Database Access

Database Programming using JDBC, Studying Javax.sql.* package, Accessing a Database from a JSP Page, Application – Specific Database Actions, Deploying JAVA Beans in a JSP Page, Introduction to struts framework.

(12Hours)

Course Title: Wireless Networks Communication

Course Code: CSE437

L	T	P	Credits
4	0	0	4

Course Objective: This course is designed to provide the students with a basic understanding and experiential learning of wireless communications and networking.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of how a Wireless networks work during data communication between wireless end points and how to implement the Security on it.

PART-A

Introduction: Differences between wireless and fixed telephone networks, Evolution of wireless networks, Examples of Wireless Communication Systems: Paging Systems, Cordless Telephone Systems, Cellular Telephone Systems, Comparison of common Wireless Communication systems, Traffic routing in wireless networks: circuit switching and packet switching.

(12 Hours)

PART-B

Wireless Local Area Networks: Introduction, WLAN topologies, requirements, working and function of physical layer and MAC layer, IEEE standards for wireless networks, Wi-Fi, Bluetooth, WiMax.

(12 Hours)

PART-C

Wireless Internet: Mobile IP components, process of agent discovery, registration and de-registration, care-of-address, concept of tunneling, Limitations of Mobile IP, introduction to micro-mobility protocols.

(12 Hours)

PART-D

Ad Hoc Wireless Networks: Introduction, Challenges in ad hoc networks: spectrum allocation, media access, routing, multicasting, energy efficiency, security and privacy; problems in ad hoc channel access, receiver-initiated MAC protocols, sender-initiated MAC protocols and existing ad hoc MAC protocols; Ad hoc routing protocols: Destination sequenced distance vector (DSDV), Ad hoc on demand distance vector routing (AODV), Dynamic source routing (DSR), Temporally ordered routing algorithm (TORA).

DAV UNIVERSITY, JALANDHAR

Course Title: Database Admin
Paper Code: CSE439

L	T	P	Credits
4	0	0	4

Course Objective: This course uses the latest database tools and techniques to prepare the student to understand, develop, and manage more advanced database applications. Students gain considerable hands-on experience with the Oracle family of databases, and define, design, and implement databases. Students learn how to use object-oriented technologies to design relational databases, and how to design relational databases to support object-oriented applications.

Learning Outcomes: Upon completion of this course the student will be able to: • properly install, configure and tune a database • properly administer servers and server groups • properly manage and optimize schemas, tables, indexes, and views •

PART-A

Introduction to Database: Client/Server Concept, Types of Databases, **10hours**
Relational Vs. Flat File Database. Background of SQL Server, Versions of SQL Server and Clients Supported by SQL Server

SQL Server 2000: Installation & Configuring SQL Server: Installing SQL Server 2000, Unattended Installations, SQL Server Services. Configuring SQL Server Network Protocol Settings. Installing SQL Server Clients.

PART-B

SQL Server Tools and Utilities: Managing SQL Server with Enterprise **11hours**
Manager, Query Analyzer, SQL Server Groups. Tools Menu, Action Menu.
Introduction to Transact – SQL (T-SQL)

Managing Database: Creating Database, Database File Placement (RAID 0, RAID 1 RAID 5), Creating Database using T-SQL and Enterprise Manager. Altering, Renaming, Dropping Database. Creating Objects in Database: Tables, Views, Constraints, Indexes.

PART-C

Managing Security: Understanding Security Modes, Windows Authentication **12Hours**
Modes, Mixed Mode, SQL Server Logins, Windows Logins, Fixed Server Logins, Creating Users, Database Roles, (Grant, Revoke ,Deny) N-Tier Security..

Database Backups and Restore: Copying Database with Copy Database Wizard. SQL Database Backup Modes (Full, Differential, Transactional Log Backup). Backing Up of the Database. Restoring Database. DTS: Its meaning, DTS Packages. DTS Storage and Designer.

PART-D

SQL Server Agent: Configuring Understanding Alerts, Jobs and Events. **12hours**
Creating Jobs: Multi Server Jobs, Creating, Editing and Deleting of Jobs. SQL Server and IIS. Understanding the Static Page and Dynamic Pages of the Internet. Internet Database Connector

Replication and Performance Optimization: Overview of Replication. Installing. Types of Replication: Merge Replication, Snapshot Replication, Transactional Replication. Using Windows System Monitor: Monitor with SQL Profiler and Query Analyzer. Optimization Techniques: Queries and Stored Procedure, Proper Indexing, Locks and Defragmentation

Course Title: System Analysis and Development

L	T	P	Credits
4	0	0	4

Paper Code: CSE441

Course Objective: The objective of this course is to provide a solid foundation of systems principles and their working.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of business functions and designing of various systems.

PART-A

System definition and concepts Characteristics and types of system, Manual and automated systems, Real-life Business sub-systems: Production, Marketing, Personal, Material, Finance.

Systems models & systems analyst Systems environment and boundaries, Real-time and distributed systems, Basic principles of successful systems, Role and need of systems analyst, Qualifications and responsibilities, Systems Analyst as an agent of change.

Phases of systems development life cycle Analysis, Design, Development, Implementation, Maintenance.

(12Hours)

PART-B

Systems documentation considerations and planning Principles of systems documentation, Types of documentation and their importance, enforcing documentation discipline in an organization, Data and fact gathering techniques: Interviews, Group communication, Presentations, Site visits. Feasibility study and its importance Types of feasibility reports System, Selection plan and proposal Prototyping, Cost-Benefit and analysis: Tools and techniques.

Systems Design and modeling Process modeling, Logical and physical design, Design representation, Systems flowcharts and structured charts, Data flow diagrams, Common diagramming conventions and guidelines using DFD and ERD diagrams. Data Modeling and systems analysis, designing the internals: Program and Process design, Designing Distributed Systems.

(12Hours)

PART-C

Modular and structured design Input/output forms design, User-interface design, Graphical interfaces, Module specifications, Module coupling and cohesion, Top-down and bottom-up design.

System Implementation and Maintenance Planning considerations, Conversion methods, producers and controls, System acceptance Criteria, System evaluation and performance, Testing and validation, Systems qualify Control and assurance, Maintenance activities and issues. Computer system as an expensive resource: Data and Strong media Procedures and norms for utilization of computer equipment, Audit of computer system usage, Audit trails.

(12 Hours)

DAV UNIVERSITY, JALANDHAR

PART-D

Types of threats to computer system and control measures Threat to computer system and control measures, Disaster recovery and contingency planning.

Object Oriented Analysis and design Introduction to Object Oriented Analysis and design life cycle, object modeling: Class Diagrams, Dynamic modeling: state diagram, Dynamic modeling: sequence diagramming.

Case study of the following systems (I) Inventory Control (II) Railway Reservation System (III) University Management System (IV) Hospital management System

DAV UNIVERSITY, JALANDHAR

Course Title: Expert System

L	T	P	Credits
4	0	0	4

Course Code: CSE443

Objectives:

The major objectives of this course is to provide students with a view of various models of expert systems, its design, Implementation methods for Knowledge extraction and representation, Fuzzy and connectionist systems.

PART-A

Expert Systems, Definitions types, components, Expert System Development Process Knowledge Representation Techniques-Logic Frames, Semantic Nets

(10 Hours)

PART-B

Domain Exploration, Knowledge elicitation, Conceptualization, Bathering, Formalizations, Methods of Knowledge Acquisition; Interviewing Sensor Data Capturing.

(12 Hours)

PART-C

Learning, Planning and Explanation in Expert System: Neural Expert System, Fuzzy Expert System, Real Time Expert Systems.

(12 Hours)

PART-D

Implementation Tools : Prolog, Expert System Shell Expert System, Study of existing expert systems- TIERES, As Mycin & AM.

(10 Hours)

ELECTIVE-III**

DAV UNIVERSITY, JALANDHAR

Course Title: .NET Programming
Paper Code: CSE426

L	T	P	Credits
4	0	0	4

Course Objective:

1. The ability to effectively use visual studio .NET.
2. An understanding of the goals and objectives of the .NET Framework. .NET is a revolutionary concept on how software should be developed and deployed.
3. A working knowledge of the C# programming language.

Learning Outcomes: Upon successful completion of this course, students should be able to: Analyze and explain the behavior of programs involving the fundamental program, write programs that use the fundamental program constructs including standard structures, Identify and correct syntax and loc errors in short programs and they will be able to Design and implement program by using NET Framework

PART-A

Introduction:

NET Framework - Common Language Runtime (CLR) - .NET Framework Class Library - .NET Windows Forms – Uses of Web Forms & Web Services - Common Language Runtime (CLR) – Common Type System - Microsoft Intermediate Language (MSIL) - Components of the CLR - Distinguish Between the .NET Compilers – Organizing and Executing Managed Code. NET Framework Class Library – Namespace – Input and Output - Serialization – Working with XML – Remoting – Enterprise Services –Interoperability – GUIs.

(15Hours)

PART-B

.NET Languages

C# Language Fundamentals – Classes and Objects – Methods – Fields and Properties - Inheritance and Polymorphism – Operator Overloading – Struts - Interfaces – Arrays – Indexers and Collections – Strings and Regular Expressions – Handling Exceptions – Delegates and Events.

VB .NET:

Language Fundamentals – Classes and Objects – Methods – Fields and Properties - Inheritance and Polymorphism – Operator Overloading– Interfaces – Arrays – Indexers and Collections – Strings and Regular Expressions.

(15Hours)

PART-C

VB .NET

Handling Exceptions – Delegates and Events - Accessing Data – ADO.NET Object Model-.NET Data Providers – Direct Access to Data – Accessing Data with Datasets.

(10Hours)

PART-D

J2EE: Enterprise Edition Overview - Multi-Tier Architecture - Best Practices-Comparison between J2EE and .NET

DAV UNIVERSITY, JALANDHAR

Course Title: Optical Network Design

L	T	P	Credits
4	0	0	4

Course Code: CSE428

Course Objective: To understand the functional details of various peripheral devices.

Learning Outcomes: Students will learn about features and working of various peripheral devices and role of various device drivers.

PART-A

Introduction to optical networking: Introduction to SONET/SDH, Legacy SONET/SDH Multiservice Provisioning Platforms, Improving SONET/SDH Bandwidth Efficiency, QoS, SONET/SDH Encapsulation of Ethernet, Packet Ring Technologies, Provisioning, Signaling, Dense Wavelength-Division Multiplexing.

(10 Hours)

PART-B

Time Division Multiplexing : An Introduction to Time-Division Multiplexing, Analog Signal Processing, Analog Signal Generation and Reception, Analog To Digital Conversion - Filtering, Sampling, Quantization, M-law and A-Law coding, Echo Cancellation ; Circuit-Switched Networks - TDM Signaling, Channel –Associated Signaling(CAS), Common Channel Signaling(CCS) ; The T-carrier - DS Framing, DS Multiframing, D4 Super frame, D5 extended Super frame, SF and ESF Alarms ; The E-carrier - E1 Frame Alignment Signal, E1 Multiframe Alignment Signal, E1 CRC Error Checking, E1 Errors and Alarms ; ISDN, TDM networks Elements - Repeaters, CSU/DSU, Digital Access and Cross-Connect Systems, Channel Bank.

(12 Hours)

PART-C

Fiber –Optic Technologies : A brief history of Fiber Optics Communications; Fiber Optic Applications; Performance Considerations; Optical –Power Measurement ,Glass fiber-optic cable, Plastic fiber optic cable, Plastic clad Silica Fiber-optic cable, Multifiber cable systems; Propagation Modes , Fiber-optic Characteristics :- Interference, Linear Characteristics - Attenuation, Chromatic Dispersion, Polarization Mode Dispersion, Optical Signal to noise Ratio Non-linear characteristics - Self –phase Modulation, Cross- phase Modulation, Four- Wave Mixing, Stimulating Raman Scattering, Stimulating brillouin Scattering

(14 Hours)

PART-D

Wavelength Division Multiplexing : Wavelength-Division Multiplexing; Unidirectional WDM; Bidirectional WDM :- Band-Separation Method, Interleaving –Filter Method, Circulator Method, Channel spacing; Coarse Wavelength-Division Multiplexing; Dense wavelength-Division Multiplexing; The ITU Grid; Wavelength- Division Multiplexing Systems; Transmitter :- Distributed Feedback Lasers, Distributed Bragg Reflector, Tunable Lasers, Vertical Cavity Surface Emitting Lasers; Chirp; Modulators; Optical Multiplexers and Multiplexers :- Thin film Filter, Fiber Bragg Grating, Arrayed Waveguide, Fabry Perot Cavity Filter, Acousto Optical Tunable Filter, Mach-Zehnder Interferometers, Couplers, circulators and Isolators, Periodic Filters, Frequency Slicers and Interleavers; Amplifiers :- Erbium-Doped Fiber Amplifiers, Raman fiber Amplifiers, Hybrid and Distributed Amplifiers; Optical-fiber Media; Receivers

WDM characteristics and Impairments to transmission: Forward Error Correction, Signal-to-noise ratio: - OSNR Calculations; Dispersion and Compensation in WDM: - Chromatic

DAV UNIVERSITY, JALANDHAR

Dispersion, Chromatic Dispersion Compensation, Polarization Mode Dispersion, Polarization Mode Dispersion Compensation

DAV UNIVERSITY, JALANDHAR

Course Title: Machine Learning
Course Code: CSE430

L	T	P	Credits
4	0	0	4

PART-A

(12 hours)

Introduction to Machine Learning: Overview of different tasks: classification, regression, clustering, control, Concept learning, information theory and decision trees

PART-B

(12 hours)

Supervised Learning: Decision trees, nearest neighbours, linear classifiers and kernels, neural networks, linear regression; learning theory; bagging and boosting; feature selection.

Unsupervised Learning: Clustering, graphical models, EM, PCA, factor analysis, manifold learning.

PART-C

(12 hours)

Reinforcement Learning: Value iteration; policy iteration; TD learning; Q learning; actor-critic

Other Topics: Bayesian learning, online learning and recent trends.

PART-D

(12 hours)

Latest trends in machine learning: Machine Learning that Matters, The Interplay of Optimization and Machine Learning Research, Data Mining: Practical Machine Learning Tools and Techniques.

DAV UNIVERSITY, JALANDHAR

Course Title: Software Quality Engineering

L	T	P	Credits
4	0	0	4

Course Code: CSE432

PART-A

(14 hours)

Introduction: Defining Software Quality, Software Quality Attributes and Specification, Cost of Quality, Defects, Faults, Failures, Defect Rate and Reliability, Defect Prevention, Reduction, and Containment, Overview of Different Types of Software Review, Introduction to Measurement and Inspection Process, Documents and Metrics.

Software Quality Metrics: Product Quality Metrics: Defect Density, Customer Problems Metric, Customer Satisfaction Metrics, Function Points, In-Process Quality Metrics: Defect Arrival Pattern, Phase-Based Defect Removal Pattern, Defect Removal Effectiveness, Metrics for Software Maintenance: Backlog Management Index, Fix Response Time, Fix Quality, Software Quality Indicators.

PART-B

(12 hours)

Software Quality Management and Models: Modeling Process, Software Reliability Models: The Rayleigh Model, Exponential Distribution and Software Reliability Growth Models, Software Reliability Allocation Models, Criteria for Model Evaluation, Software Quality Assessment Models: Hierarchical Model of Software Quality Assessment.

PART-C

(10 hours)

Software Quality Assurance: Quality Planning and Control, Quality Improvement Process, Evolution of Software Quality Assurance (SQA), Major SQA Activities, Major SQA Issues, Zero Defect Software, SQA Techniques, Statistical Quality Assurance, Total Quality Management, Quality Standards and Processes.

PART-D

(10 hours)

Software Verification, Validation & Testing: Verification and Validation, Evolutionary Nature of Verification and Validation, Impracticality of Testing all Data and Paths, Proof of Correctness, Software Testing, Functional, Structural and Error-Oriented Analysis & Testing, Static and Dynamic Testing Tools, Characteristics of Modern Testing Tools.

Course Title: Real Time System

L	T	P	Credits
4	0	0	4

Course Code: CSE434

PART-A

Introduction – Issues in Real Time Computing, Structure of a Real Time System, Task Classes, Performance Measures for Real Time Systems, Estimating Program Run Times.

Task Assignment and Scheduling – Classical Uniprocessor scheduling algorithms, Uniprocessor scheduling of IRIS tasks, Task assignment, Mode changes, and Fault Tolerant Scheduling.

(11 Hours)

PART-B

Programming Languages and Tools – Desired language characteristics, Data typing, Control structures, Facilitating Hierarchical Decomposition, Packages, Run – time (Exception) Error handling, Overloading and Generics, Multitasking, Low level programming, Task Scheduling, Timing Specifications, Programming Environments, Run – time support.

(11 Hours)

PART-C

Real time Databases – Basic Definition, Real time Vs General Purpose Databases, Main Memory Databases, Transaction priorities, Transaction Aborts, Concurrency control issues, Disk Scheduling Algorithms, Two – phase Approach to improve Predictability, Maintaining Serialization Consistency, and Databases for Hard Real Time Systems.

(11 Hours)

PART-D

Real – Time Communication – Communications media, Network Topologies Protocols, Fault Tolerant Routing. Fault Tolerance Techniques – Fault Types, Fault Detection. Fault Error containment Redundancy, Data Diversity, Reversal Checks, Integrated Failure handling.

Reliability Evaluation Techniques – Obtaining parameter values, Reliability models For Hardware Redundancy, Software error models. Clock Synchronization – Clock, A Non-fault Tolerant Synchronization Algorithm, Impact of faults, Fault Tolerant Synchronization in Hardware, Fault Tolerant Synchronization in software.

Course Title: Introduction to Python

L	T	P	Credits
4	0	0	4

Course Code: CSE436

PART-A

(12 hours)

Introduction to Python -- types, variables, input/output, Flow of Control -- branching, if / else, loops, modules, Loops, Strings, and Tuples

PART-B

(12 hours)

Recursion, Strings, Tuples, Lists and Files, Lists and Dictionaries, Functions, Interface, Debugging

PART-C

(12 hours)

Midterm , `__magic__` functions , Objects, classes, OOP and Inheritance, Files and Exceptions, read write, and manage your files and directories

PART-D

(12 hours)

OS , GUI, Packages, Copy, Dynamic Code, web client and servers, probability and statistical calculations, access data store in databases.

Course Title: NETWORK SECURITY

L	T	P	Credits
4	0	0	4

Course Code: CSE438

Course Objective: The objective of this course is to gain an understanding of various methods, and protocols used in network security.

Learning Outcomes: After the completion of this course the participants would gain the knowledge of various protocols of networking, security issues and password authentication protocols.

PART-A

Overview of computer networks, seven-layer architecture, TCP/IP suite of protocols. Introduction to information Security, Types of information security controls, need of Information Security, Allocation of information security responsibilities, Security mechanisms, Identification of Security threats and their effects on security, Technologies and Security policies, real time Communication security. An introduction to LAN/WAN Security and internet Security, Security Management for the World Wide Web and Internet firewalls and how to get past the firewall, Steganography, Layers and Cryptography.

(11 Hours)

PART-B

Overview of Authentication schemes: Password and address based Authentication, Cryptographic Authentication protocols, Trusted Intermediaries and session key establishment. **Authentication of people:** Passwords, Online and offline password guessing, eavesdropping, password and careless users, authentication tokens and biometrics.

(12 Hours)

PART-C

Security handshake pitfalls: Mutual authentication, Integrity for data, Mediated Authentication, Strong password protocols: EKE, SRP, SPEKE and PDM.

Public key infrastructure (PKI): Terminology, PKI trust models, Revocation and Authorization futures.

IPsec: Overview of IPsec, IP and IPv6, AH and ESP, IKE, SSL/TLS.

(12 Hours)

PART-D

Overview of IT Security, Hacking, Hackers and Types of Hackers, Attacks, Denial of Service Attacks(DoS), types of DOS attacks, Viruses and their characteristics, impact they can have on operations and business, Detection and Prevention Mechanisms, types of virus, The self-Hack Audit, VPN.

Intrusion: Intruders, Audit records, Intrusion detection, distributed intrusion detection, honeypots.

Electronic Mail Security: PEM, Structure of PEM Message and S/MIME, PGP etc.

DAV UNIVERSITY, JALANDHAR

Course Title: BIG DATA ANALYTICS AND BUSINESS INTELLIGENCE
Course Code: CSE440

L	T	P	Credits
4	0	0	4

PART-A

(12 hours)

Introduction to Data Analytics: Data and Relations, Data Visualization, Correlation, Regression, Forecasting, Classification, Clustering.

Big Data Technology Landscape: Fundamentals of Big Data Types, Big data Technology Components, Big Data Architecture, Big Data Warehouses, Functional vs. Procedural Programming Models for Big Data.

PART-B

(12 hours)

Introduction to Business Intelligence: Business View of IT Applications, Digital Data, OLTP vs. OLAP, Why, What and How BI? , BI Framework and components, BI Project Life Cycle, Business Intelligence vs. Business Analytics.

Big Data Analytics: Big Data Analytics, Framework for Big Data Analysis, Approaches for Analysis of Big Data, ETL in Big Data, Introduction to Hadoop Ecosystem, HDFS, Map-Reduce Programming, Understanding Text Analytics and Big Data, Predictive analysis on Big Data, Role of Data analyst.

PART-C

(12 hours)

Business implementation of Big Data: Big Data Implementation, Big Data workflow, Operational Databases, Graph Databases in a Big Data Environment, Real-Time Data Streams and Complex Event Processing, Applying

PART-D

(12 hours)

Big Data in a business scenario :Security and Governance for Big Data, Big Data on Cloud, Best practices in Big Data implementation, Latest trends in Big Data, Latest trends in Big Data, Big Data Computation, More on Big Data Storage, Big Data Computational Limitations.

Recommended books:

DAV UNIVERSITY, JALANDHAR

Course Title: SOFTWARE TESTING
Course Code: CSE442

L	T	P	Credits
4	0	0	4

PART-A

(12 hours)

Introduction: Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs

Flow graphs and Path testing: Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

PART-B

(12 hours)

Transaction Flow Testing: Transaction flows, transaction flow testing techniques. Dataflow testing: Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing.

Domain Testing: domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability.

PART-C

(12 hours)

Paths, Path products and Regular expressions: Path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection.

Logic Based Testing: Overview, decision tables, path expressions, kv charts, specifications.

State, State Graphs and Transition testing: State graphs, good & bad state graphs, state testing, Testability tips.

PART-D

(12 hours)

Graph Matrices and Application: Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. Usage of JMeter and Winrunner tools for functional / Regression testing, creation of test script for unattended testing, synchronization of test case, Rapid testing, Performance testing of a data base application and HTTP connection for website access.

DAV UNIVERSITY, JALANDHAR

Course Title: Embedded System
Course Code: CSE444

L	T	P	Credits
4	0	0	4

PART-A

(12 hours)

Introduction: Introduction to Embedded Systems, Classification of Embedded System, Concept of Embedded System Design, and Design challenges: Processor technology, IC technology, Design technology and Trade-offs.

Hardware and Software Co-Design in Embedded System: Buffers and latches, Reset circuit, Chip, Timers and counters and watch dog timers, Universal asynchronous receiver, transmitter (UART), Pulse width modulators, LCD controllers. Development of fixed ROM image, Code generation tools: Emulator, Simulator and Debugger.

PART-B

(12 hours)

Embedded software development environments: Challenges and issues in embedded software development, Device drivers, System calls and Programming languages: assembly languages, high level languages like C/C++, Source Code Engineering tool for Embedded C/C++. Introduction to Embedded Java.

Processor and memory Organization: Custom Single Purpose Processor Hardware, General-Purpose Processor: Introduction, Basic Architecture, Application Specific Instruction Set Processors (ASIPS), Microcontrollers and Digital Signal Processors. Memory writes ability, Storage performance, Tradeoff s, Memory hierarchy and cache.

PART-C

(10 hours)

Software Engineering in Embedded System: Software Engineering practice in the embedded Software development process. Software models used in designing, Unified Modelling language, Software maintenance.

PART-D

(10 hours)

Embedded Operating System: Operating system services, Embedded Operating system, Real Time Operating system, Interrupt latency and Response time, Interrupts Routines in RTOS, Introduction to VxWorks and Micro OS-II. Department of Computer Science and Engineering

GENERIC ELECTIVE-I

DAV UNIVERSITY, JALANDHAR

Course Title: Information Security
Course Code: CSE801

L	T	P	Credits
4	0	0	4

Course Objective: The aim of this course is to provide attendees with a thorough understanding of the issues associated with the design, provision and management of security services for modern communication and information systems. Students will learn the different aspects of information and network security and you will be able to speak about a multitude of security attacks and the defensive strategies used to combat them.

Learning Outcomes: After completing this course the student should be able to:

- Describe the fundamental concepts of information system security.
- Understand the following terms: security policy, host based security, firewall, and packet filtering and intrusion detection.

PART-A

Overview: Services, Mechanisms, and Attacks, the OSI Security Architecture, a Model for Network, Security.

Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography.

Block Ciphers And The Data Encryption Standard: Simplified DES, Block Cipher Principles, The Data Encryption Standard, The Strength of DES, Differential and Linear Cryptanalysis, Block Cipher Design Principles, Block Cipher Modes of Operation.

Introduction To Finite Fields: Groups, Rings, and Fields, Modular Arithmetic, Euclid's Algorithm, Finite Fields of the Form $GF(p)$, Polynomial Arithmetic, Finite Fields of the Form $GF(2^n)$.

(10Hours)

PART-B

Advanced Encryption Standard: Evaluation Criteria for AES, The AES Cipher.

Contemporary Symmetric Ciphers: Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher.

Public-Key Encryption: Introduction to Number Theory: Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality, The Chinese Remainder Theorem, Discrete Logarithms.

Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems, the RSA Algorithm, Recommended Reading and Web Site, Key Terms, Review Questions, and Problems.

Key Management and Other Public-Key Cryptosystems: Key Management, Diffie-Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography.

(10Hours)

PART-C

Message Authentication and Hash Functions: Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions and MACs.

Hash Algorithms: MD5 Message Digest Algorithm, Secure Hash Algorithm, RIPEMD-160, and HMAC.

DAV UNIVERSITY, JALANDHAR

Digital Signatures and Authentication Protocols: Digital Signatures, Authentication Protocols, Digital Signature Standard.

(10Hours)

PART-D

Network Security Practice: Authentication Applications: Kerberos, X.509 Authentication Service, Electronic Mail Security: Pretty Good Privacy, S/MIME.

IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management,

Web Security: Web Security Considerations, Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction.

System Security: Intruders: Intruders, Intrusion Detection, Password Management, Malicious Software: Viruses and Related Threats, Virus Countermeasures, Firewalls: Firewall Design Principles, Trusted Systems.

Course Title: Data Mining Techniques

Course Code: CSE803

L	T	P	Credits
4	0	0	4

Course Objective: This course will be an introduction to data mining and warehousing. Topics will range from statistics to database, with a focus on analysis of large data sets. Another objective is to study the methodology of engineering legacy databases for data warehousing and data mining to derive business rules for decision support systems.

PART-A

Data mining: Overview, Definition & Functionalities

Data Processing: Form of Data Pre-processing, Data Cleaning: Missing Values, Noisy Data, (Binning Clustering, Regression, Computer and Human inspection), Inconsistent Data, Data Integration and Transformation. Data Reduction: Data Cube Aggregation, Dimensionality reduction, Data Compression, Numerosity, Reduction, Clustering, Discretization and Concept hierarchy generation

14 Hours

PART-B

Concept Description: Definition, Data Generalization, Analytical Characterization, Analysis of attribute relevance, Mining Class comparisons, Statistical measures in large Databases. Measuring Central Tendency, Measuring Dispersion of Data, Graph Displays of Basic Statistical class Description, Mining Association Rules in Large Databases.

Association rule mining: mining Single-Dimensional Boolean Association rules from Transactional Databases– Apriori Algorithm Mining Multilevel Association rules from Transaction Databases Mining Multi-Dimensional Association rules from Relational Databases

14 hours

PART-C

Classification and Predictions: What is Classification & Prediction, Issues regarding Classification and prediction, Decision tree, Bayesian Classification, Classification by Back propagation, Multilayer feed-forward Neural Network, Back propagation Algorithm, Classification methods K-nearest neighbour classifiers, Genetic Algorithm.

Cluster Analysis: Data types in cluster analysis, Categories of clustering methods: Partitioning methods. Hierarchical Clustering-CURE and Chameleon, Density Based Methods-DBSCAN, OPTICS, Grid Based Methods-STING, CLIQUE, Model Based Method –Statistical Approach, Neural Network approach, Outlier Analysis

14 hours

PART-D

Mining Complex Types of Data: Multidimensional analysis & Descriptive mining of Complex data objects, Mining Spatial Databases, Mining Multimedia Databases, Mining Time-series & Sequence data, Mining Text databases, Mining World -Wide Web

Data Mining Applications and Trends in Data Mining: Massive Datasets/Text mining, Agent Based Mining

DAV UNIVERSITY, JALANDHAR

Course Title: Artificial Intelligence
Course Code: CSE805

L	T	P	Credits
4	0	0	4

PART-A

(12 Hours)

Introduction : Foundations of artificial intelligence(AI), History of AI, Basics of AI, Artificial Intelligence Problems, Artificial Intelligence Techniques Problem Spaces and Search : Defining the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in designing search problems, Breadth first search (BFS), Depth first search (DFS), Bi-directional Search

PART-B

(12 Hours)

Informed Search Strategies : Best first search, A* algorithm, Heuristic functions, Generate and Test, Hill Climbing, Simulated Annealing, Constraint satisfaction

PART-C

(12 Hours)

Knowledge Representation : Representations & mappings, Approaches in knowledge representation, Issues in knowledge representation, Predicate logic, Propositional logic, Procedural versus declarative knowledge, Logic programming, Forward versus backward reasoning

Symbolic reasoning under uncertainty : Non monotonic reasoning, Logic for non monotonic reasoning, Implementation issues, Augmenting a problem solver, Truth maintenance system
Statistical reasoning : Certainty factors & rule-based systems, Probability & Bayes' theorem, Bayesian networks, Dempster-Shafer-Theory

PART-D

(12 Hours)

Weak slot and filler structures : Semantic nets, Frames

Strong slot and filler structures : Conceptual dependency, Scripts

Game playing : The min-max search procedure, Alpha-beta cutoffs, Iterative deepening

Advance topics in Artificial Intelligence : Artificial Neural Network, Fuzzy logic systems, Genetic algorithms, Natural Language Processing(NLP)

DAV UNIVERSITY, JALANDHAR

Course Title: Software Engineering & Project Management
Course Code: CSE801

L	T	P	Credits
4	0	0	4

Course Objective: To understand the basic concepts of software engineering and software development life cycle.

Learning Outcomes: Students will learn about the different activities of software development and about the risk management. They will get aware about the different case tools.

PART – A

Introduction to Software Engineering: Software Problem, Software Engineering, Approach, Software process, Characteristics of Software Engineering Process.

Process models: The waterfall model, Incremental process models, Evolutionary process models, The Unified process.

Software Requirements: Functional and non-functional requirements, User requirements, System requirements, Interface specification, the software requirements document

(12Hours)

PART – B

Software Project Planning: Cost estimation, cost estimation models, Project scheduling, Software Configuration management, Team Structure, Risk Management.

Requirements engineering process: Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management.

System models: Context Models, Behavioural models, Data models, Object models, structured methods

(15 Hours)

PART – C

Creating an architectural design: Software architecture, Data design, Architectural styles and patterns, Architectural Design

Object-Oriented Design: Objects and object classes, An Object-Oriented design process, Design evolution.

Performing User interface design: Golden rules, User interface analysis and design, interface analysis, interface design steps.

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, Black-Box and White-Box testing, Validation testing.

Product metrics: Software Quality, Metrics for Analysis Model, Metrics for Design Model, Metrics for source code, Metrics for testing, Metrics for maintenance.

Metrics for Process and Products: Software Measurement, Metrics for software quality.

(12 Hours)

PART – D

Risk management: Reactive vs. Proactive Risk strategies, software risks, Risk identification, Risk projection, Risk refinement, RMMM, RMMM Plan.

Quality Management: Quality concepts, Software quality assurance, Software Reviews, Formal technical reviews, Statistical Software quality Assurance, Software reliability, The ISO 9000 quality standards.

CASE Tools: Types of CASE tools, advantages and components of CASE tools, Unified Modelling Language (UML)

(11 Hours)

GENERIC ELECTIVE-II

DAV UNIVERSITY, JALANDHAR

Course Title: Network Security and Ethical Hacking
Course Code: CSE802

L	T	P	Credits
4	0	0	4

PART-A

(12 hours)

Introduction: Security, Functionality and ease of use Triangle, Essential Terminology, Elements of Security, Difference between Penetration Testing and Ethical Hacking, Deliverables ethics and legality, Computer Crimes and Implications.

Reconnaissance: Information Gathering Methodology, Locate the Network Range, Active and Passive reconnaissance

PART-B

(12 hours)

Scanning: Scanning, Elaboration phase, active scanning, scanning tools NMAP, hping2. Enumeration, DNS Zone transfer. Detecting live systems on the target network, Discovering services running /listening on target systems, Understanding port scanning techniques, Identifying TCP and UDP services running on the target network, Understanding active and passive fingerprinting

Trojans and Backdoors: Effect on Business, Trojan, Overt and Covert Channels, Working of Trojans, Different Types of Trojans, Different ways a Trojan can get into a system, Indications of a Trojan Attack, Some famous Trojans and ports used by them

PART-C

(12 hours)

Sniffers: Definition of sniffing, Sniffer working, Passive Sniffing, Active Sniffing, Ethereal tool, Man-in-the-Middle Attacks, Spoofing and Sniffing Attacks, ARP Poisoning and countermeasures.

Denial of Service: Goal of DoS (Denial of Service), Impact and Modes of Attack.

Social Engineering: Social Engineering, Art of Manipulation, Human Weakness, Common Types of Social Engineering, Human Based Impersonation, Example of Social Engineering, Computer Based Social Engineering, Reverse Social Engineering, Policies and Procedures, Security Policies-checklist

PART-D

(12 hours)

Session Hijacking: Understanding Session Hijacking, Spoofing vs Hijacking, Steps in Session Hijacking, Types of Session Hijacking, TCP Concepts 3 Way and shake, Sequence numbers

Ethical Hacking- System Hacking and Hacking Wireless Networks: Aspect of remote password guessing, Role of eavesdropping ,Various methods of password cracking, Keystroke Loggers, Understanding Sniffers ,Comprehending Active and Passive Sniffing, ARP Spoofing and Redirection, DNS and IP Sniffing, HTTPS Sniffing. Introduction to 802.11, Role of WEP, Cracking WEP Keys, Sniffing Traffic,Wireless DOS attacks, WLAN Scanners, WLAN Sniffers, Hacking Tools, Securing Wireless Networks.

DAV UNIVERSITY, JALANDHAR

Course Title: Cloud Computing
Course Code: CSE 804

L	T	P	Credits
4	0	0	4

Course Objective: Analyze the components of cloud computing showing how business agility in an organization can be created. Compare and contrast the economic benefits delivered by various cloud models based on application requirements, economic constraints and business requirements.

Learning Outcomes: This module gives students the skills and knowledge to understand how Cloud Computing Architecture can enable transformation, business development and agility in an organization. .

PART-A

Cloud Computing : Overview, Applications, Intranet and the Cloud, First Movers on the cloud, the need for Cloud Computing, Benefits of cloud Computing, Limitations of the Cloud Computing, security concerns and regulatory issues, over view of different cloud computing applications which are implemented, Business case for implementing a Cloud.

14 Hours

PART-B

Cloud Computing Technologies: Hardware and Infrastructure: Clients, Security, Network, services

Accessing the Clouds: Platforms, WEB applications, WEB APIS, WB Browsers

Cloud Storage: Overview, Storage provides, Cloud Standards: Applications, Client, Infrastructure, Services.

13 Hours

PART-C

Cloud Computing Mechanisms: Software as a service: Overview, Driving Forces, Company offerings,

Industries, Software + services: Overview, Mobile Device Integration, Providers, Microsoft Online

Application development: Google, Microsoft, Intuit Quick base, Cast Iron Cloud, Bungee Connect,

Development Platforms: Google, Sales Force, Azure, Trouble shooting, Application management

14 Hours

PART-D

Local Clouds: Virtualization, server solutions, Thin Clients

Migrating to the clouds: Cloud services for individuals, Mid-market, and Enterprise wide, Migration, best practices, analyzing the service.

13 Hours

DAV UNIVERSITY, JALANDHAR

Course Title: E-Commerce
Course Code: CSE 806

L	T	P	Credits
4	0	0	4

PART-A

(12 hours)

INTRODUCTION: Scope of electronic commerce, trade cycle, electronic markets, electronic data interchange, Internet commerce and e-commerce in perspective.

BUSINESS STRATEGY IN AN ELECTRONIC AGE: Value chain– supply chains, Porter’s value chain model and inter– organizational value chains. Competitive Advantage– Competitive strategy, Porter’s Model, First Mover advantage and competitive advantage using e-commerce Business strategy-Introduction to Business Strategy, Strategic Implications of it of IT Technology, e-commerce Implementation and evaluation.

PART-B

(12 hours)

CASE STUDY: e-commerce in passenger-Air Transport, choices, Airline booking systems, competition and customer loyalty, Web booking systems and competitive outcomes.

BUSINESS TO BUSINESS ELECTRONIC COMMERCE: Inter organizational Transactions, The credit Transaction Trade cycle. A variety of transactions, Electronic markets – markets and electronic markets, usage of electronic markets, Advantages and disadvantages of electronic markets.

PART-C

(12 hours)

ELECTRONIC DATA INTERCHANGE (EDI): Definition and benefits of EDI. EDI technology, standards, communications, implementation, agreements and securities. EDI trading patterns and transactions.

BUILDING AN E-COMMERCE SITE: Introduction to object behavior, components, active scripting. Object models, Infrastructure objects, service objects and data objects, choosing the objects. Building a scalable application, Adding the configure method, connecting to the database. Accessing and versioning the database. Building the catalog object with example. Creating shopping basket-Holding state, creating the tables for a shopping basket, modifying the object model and making the basket accessible.

PART-D

(12 hours)

J2EE ARCHITECTURE OVERVIEW: Enterprise components. Information technology in the enterprises. Introduction to enterprise objects and enterprise component model. The J2EE model features J2EE components – container architecture. Enterprises Java and J2EE architecture.

Latest trends in E-Commerce: Advanced SWOT Analysis of E-Commerce, implications and impacts Of Web Services to Electronic Commerce Research and Practices.
