

DAV UNIVERSITY JALANDHAR

Course Scheme & Syllabus

For

B.Tech. in Computer Science Engineering

**1st TO 8th SEMESTER
Examinations 2022–2023 Session**

Syllabi Applicable For Admissions in 2022

Mandatory Induction program (Appendix A)
[Induction program for students to be offered right at the start of the first year.]

3 Weeks Induction Program (Mandatory)

- **Physical activity**
- **Creative Arts**
- **Universal Human Values**
- **Literary**
- **Proficiency Modules**
- **Lectures by Eminent People**
- **Visits to local Areas**
- **Familiarization to Dept. /Branch & Innovations**

Detailed Syllabus

Course Title: Engineering Mathematics-I
Paper Code: MTH151A

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

CourseObjective: The aim of this course is to familiarize the students with the theory of matrices which are used in solving equations in mechanics and the other streams. This course also provides a comprehensive understanding of the origin and development of ideas to exhibit the techniques origin and development of ideas to exhibit the techniques of solving ordinary differential equations.

Course Outcomes:

CO1: Understand the theory of matrices used in solving the problems in mechanics and other streams.

CO2: Understand the concept of partial differentiation, Euler's theorem and its extension, total derivative, maxima and minima of a function of two variables, and Lagrange's method of multipliers.

CO3: Understand the concept of ordinary differential equation and their solutions (Homogeneous, differential equation, exact differential equations).

CO4: Understand the solution of differential equations with constant coefficients by method of variation of parameters and simultaneous linear differential equations.

UNIT-A

Rank of matrices, Inverse of Matrices, Gauss Jordan Method, reduction to normal form, Consistency and solution of linear algebraic system of equations, Gauss Elimination Method, Eigen values and Eigen vectors, Diagonalisation of Matrix, Cayley Hamilton theorem. Orthogonal, Hermition and unitary matrices.

(11Hours)

UNIT-B

Concept of limit and continuity of a function of two variables, Partial derivatives, Homogenous Function , Euler's Theorem, Total Derivative, Differentiation of an implicit function, chain rule, Change of variables, Jacobian, Taylor's and McLaurin'sseries. Maxima and minima of a function of two and three variables: Lagrange's method of multipliers.

(13Hours)

UNIT-C

Formation of ordinary differential equations, solution of first order differential equations by separation of variables, Homogeneous equations, Reduce to Homogenous, exact differential equations, equations reducible to exact form by integrating factors, equations of the first order and higher degree, Clairaut's equation.

(13Hours)

UNIT-D

Solution of differential equations with constant coefficients: method of differential operators. Non – homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters, Simultaneously Linear differential equation.

(11Hours)

Course Title: Chemistry
Course Code: CHE151A

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objectives: The objective of the Engineering Chemistry is to acquaint the student with the basic phenomenon/concepts of chemistry for the development of the right attitudes by the engineering students to cope up with the continuous flow of new technology. The student will be able to understand the new developments and breakthroughs efficiently in engineering and technology.

Course Outcomes:

CO1 Students will be able to understand the basic concept of spectroscopy (IR, UV, and NMR).

CO2 Familiarize with the basic properties of water and its uses in industrial and domestic purposes and students will be able to know about the different methods for the treatment of hard water to make soft water and know how to use this soft water in industrial uses and potable water at cheaper cost.

CO3 To provide the basic knowledge about corrosion, their classification, different mechanism and understand the various factors influencing corrosion and various methods of corrosion control.

CO4 Understand the concept of chemistry in Nano science and nanotechnology. Able to design economically and new method of the synthesis of nanomaterial.

CO5 To provide the basic knowledge about the classification of polymer. Familiarize students with a complete packet of information of mechanism of polymerization, the effect of molecular weight on the properties of polymers, and understand the basic concept of polymer reinforced composites.

UNIT- A

Spectroscopy and its Applications

General Introduction: Introduction, electromagnetic spectrum, absorption and emission spectrum, atomic and molecular spectroscopy, types of molecular spectra, experimental techniques, selection rules, width and intensities of spectral lines.

UV/Visible Spectroscopy: types of electronic Transitions, Chromophores, Auxochromes, Effect of conjugation on Chromophores, Factors affecting λ_{max} and intensity of spectral lines, effect of solvent on λ_{max} , isobestic point, applications.

IR Spectroscopy: Infrared region, fundamental modes of vibrations and types, theory of infrared spectra, vibrational frequency and energy levels, anharmonic oscillator, modes of vibrations of polyatomic molecules, characteristic signals of IR spectrum, finger print region, factors affecting vibrational frequency; applications.

NMR Spectroscopy: Principle and instrumentation, relaxation processes, proton magnetic resonance spectroscopy, number of signals, Chemical shift, Spin-Spin Splitting, coupling constant, applications.

(11Hours)

UNIT- B

Water and its treatment

Introduction, hardness of water, degree of hardness, units of hardness, boiler feed water: specification, scales and sludge formation; priming & foaming, boiler corrosion, caustic embrittlement, treatment of boiler feed water, internal treatment of water; softening of water by lime-soda, zeolite and ion exchange methods, desalination of water; Water for domestic use: purification of water for domestic use.

Corrosion and its Prevention

Introduction; different types of corrosion - wet and dry corrosion; mechanism of wet corrosion; comparison of dry and wet corrosion, Types of electrochemical corrosion: galvanic corrosion, concentration cell corrosion or differential aeration corrosion, waterline corrosion, pitting corrosion, crevice corrosion, stress corrosion, intergranular corrosion; other forms of corrosion: atmospheric corrosion, soil corrosion, microbiological corrosion, erosion corrosion, Filiform corrosion, stray current corrosion, passivity, galvanic series, factors influencing corrosion, various methods of corrosion control.

(13Hours)

UNIT-C

Chemistry in Nanoscience and Technology: Introduction, Materials self-assembly, molecular vs. material self-assembly, hierarchical assembly, self-assembling materials, two dimensional assemblies, Mesoscale self-assembly, coercing colloids, Nano-crystals, supramolecular structures, Nano scale materials, future perspectives applications, nano-composites and its applications.

(13Hours)

UNIT-D

Polymers and polymerization

Introduction, monomer and repeating unit, degree of polymerization, functionality, classification of polymers: based on origin, monomers, structure, method of synthesis, tacticity or configuration, action of heat, chemical composition, ultimate form; types of polymerization, specific features of polymers, regularity and irregularity, tacticity of polymers, average molecular weights and size, determination of molecular weight by number average methods, effect of molecular weight on the properties of polymers, introduction to polymer reinforced composites.

Course Title: Computer Fundamentals and Programming

Course Code: CSE101B

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: To get basic knowledge of computers (hardware and software), its components and Operating systems. To acquire programming skills in C, basic knowledge of Internet

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Understand basics of computer and working with OS.

CO2: Understand the programming concept & handle possible errors during program execution

CO3: To work with textual information, characters and strings

CO4: Ability to work with arrays & pointers

UNIT-A

Introduction to Computers

Computer System, Block diagram of a Computer System and its working. Classification and generation of computers. I/O devices and types of memories. Number system.

Computer Hardware, Software and Firmware

Types of Software, Operating Systems, their types and functions. Comparison between MS-Office and open office with its latest features. Booting and its types.

Computer Network

Types of network and networking devices.

(15Hours)

UNIT-B

Idea of Algorithm:

Steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudo code with examples.

Introduction to Programming

Generation of programming languages. Basic Constructs of C Keywords, Identifiers, Variables, Data Types and their storage, Various Operators and Expressions, External Variables and Scope of Variables, Structure of C Program and stages of compilation of C program. Control Structures Decision making statements.

(15Hours)

UNIT-C

Arrays and Functions

Functions Advantages of functions, function prototype, declaring and defining functions, return statement, call by value and call by reference, recursion, and storage classes. Arrays and Strings. Various string manipulation functions.

(8Hours)

UNIT-D

Structures and Pointers

Introduction to Pointers and its types. Structure and union. Use of enum data type. Macros and conditional compiler directives.

(8Hours)

Course Title: Environmental Studies
Paper Code: EVS100A

| L | T | P | Credits | Marks |
|---|---|---|---------|-----------------------------|
| 4 | 0 | 0 | 0 | Satisfactory/Unsatisfactory |

Course Objective: This course aims at understanding the students in aspects of environmental problems, its potential impacts on global ecosystem and its inhabitants, solutions for these problems as well as environmental ethics which they should adopt to attain sustainable development.

Unit 1

Introduction to Environmental Studies

1. Definition, components and types of Environment.
2. Meaning of Environmental Studies and its Multidisciplinary nature;
3. Scope and importance; Concept of sustainability and sustainable development.

6 hours

Natural Resources: Renewable and Non---Renewable Resources

1. Land resources and land use change; Land degradation, soil erosion and desertification.
2. Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations.
3. Water: Use and over---exploitation of surface and ground water, floods, droughts, conflicts over water (international & inter---state).
4. Energy resources: Renewable and non-renewable energy sources, use of alternate energy sources, growing energy needs, case studies.

8 hours

Unit II

Ecosystems

1. What is an ecosystem? Structure and function of ecosystem; Energy flow in an ecosystem: food chains, food webs and ecological succession. Case studies of the following ecosystems :
 - a. Forest ecosystem
 - b. Grassland ecosystem
 - c. Desert ecosystem
 - d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

2 hours

Biodiversity and Conservation

Levels of biological diversity: genetic, species and ecosystem diversity; Biogeographic zones of India; Biodiversity patterns and global biodiversity hot spots

- a. India as a mega-biodiversity nation; Endangered and endemic species of India
- b. Threats to biodiversity: Habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions; Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.
- c. Ecosystem and biodiversity services: Ecological, economic, social, ethical, aesthetic and Informational value.

8 hours

Unit III

Environmental Pollution

Environmental Pollution:

types, causes, effects and controls; Air, water, soil and noise pollution

1. Nuclear hazards and human health risks
2. Solid waste management: Control measures of urban and industrial waste.
3. Pollution case studies.

8 hours

Environmental Policies & Practices

1. Climate change, global warming, ozone layer depletion, acid rain and impacts on human communities and agriculture
- Environment Laws: Environment Protection Act; Air (Prevention & Control of Pollution) Act; Water (Prevention and control of Pollution) Act; Wildlife Protection Act; Forest Conservation Act. International agreements: Montreal and Kyoto protocols and Convention on Biological Diversity (CBD).
- Nature reserves, tribal populations and rights, and human wildlife conflicts in Indian context.

7 hours

Unit IV

Human Communities and the Environment

1. Human population growth: Impacts on environment, human health and welfare.
2. Resettlement and rehabilitation of project affected persons; case studies.
3. Disaster management: floods, earthquake, cyclones and landslides.
4. Environmental movements: Chipko, Silent valley, Bishnois of Rajasthan.
5. Environmental ethics: Role of Indian and other religions and cultures in environmental conservation.
6. Environmental communication and public awareness, case studies (e.g., CNG vehicles in Delhi).

6 hours

Field work

- Visit to an area to document environmental assets: river/ forest/ flora/fauna, etc.
- Visit to a local polluted site---Urban/Rural/Industrial/Agricultural.
- Study of common plants, insects, birds and basic principles of identification.
- Study of simple ecosystems---pond, river, Delhi Ridge, etc.

5 hours

Course Title: Engineering Drawing-I
Course Code: MEC101a

| L | T | P | Credits |
|---|---|---|---------|
| 2 | 0 | 4 | 4 |

Course Objectives: Students will be able to use the techniques to interpret the drawings and to use it in the field work of engineering. They will learn various lines, planes, solids and their sectioning and to develop their lateral surfaces. Concepts of orthographic and isometric projections

Course Outcomes: At the end of the course, a student will be able to:

CO1: Understand the concepts of Engineering Drawing, understanding plain scale and diagonal scale, and projection of point in different quadrants.

CO2: The student will have a basic understanding projection of Lines, Planes and Solids placed in 1st or 3rd quadrant

CO4: The student will be able to understand & draw the section of solids, and development of surfaces and orthographic projection and their physical significance.

CO5: The student will have a working knowledge of isometric projections and will have exposure on basic commands of Auto CAD software.

UNIT-A

Drawing Techniques

Introduction to drawing instruments, various types of lines and their convention, principles of dimensioning, Engineering symbols, Gothic lettering in single stroke as per SP-46 code (Vertical and inclined)

Scales

Concept of scaling, construction of plane and diagonal scales

(11Hours)

UNIT-B

Projection of Points

Concept of plane of projections (Principle planes), First and third angle projections; projection of points in all four quadrants, shortest distance problems

Projection of Lines and Planes

Projection of line parallel to both planes, perpendicular to one plane, inclined to one and both the reference planes and their traces. Plane perpendicular to one plane inclined to one and both the reference planes and their traces. Concept of profile plane and auxiliary planes, to find the true length, α , β , θ and ϕ .

(12Hours)

UNIT-C

Projection of Solids

Right and oblique solids; solids of revolution and polyhedrons, projection of solid with axis perpendicular to one plane and parallel to one or both reference planes. Projection of solid with axis inclined to one or both reference planes.

Sectioning of Solids

Theory of sectioning, types of section planes, their practice on projection of solids, Sectioning by auxiliary planes, to find true section of truncated solids.

(12Hours)

UNIT-D

Development of Surfaces

Method of Development, Development of surfaces: Parallel line and Radial line method. Development of oblique solids, Development of curved surfaces.

Orthographic and Isometric Views

Draw orthographic views from isometric view or vice-a-versa, Missing line and missing view

(10Hours)

Course Title: Basic Communication Skills

Course Code: ENG151B

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objectives:

- To enhance students' vocabulary and comprehension skills through the prescribed texts.
- To hone students' reading and writing skills.
- To teach the rules of English grammar descriptively.
- To make students aware about the socio-cultural aspect of English.

Course Outcomes

CO1: Students will be able to apply the concepts of grammar in socio-cultural context.

CO2: Students will be able to perform basic writing tasks in order to enhance their communication skills.

CO3: Students will recapitulate the concepts of Parts of Speech and Modals so as to improve communication.

CO4: Students will be able to understand the relationship between Society and Language through reading and analysing selected works.

Unit - A

Applied Grammar (in Socio-Cultural Context)

- Tenses
- Passives
- Reported/Reporting Speech

Unit - B

1. Reading (Communicative Approach to be Followed)

- Nissim Ezekiel : The Patriot (Poem)

(Sub-topic: Basic Introduction to Indianisms and Difference between Indian English & Standard English)

2. Writing

- Paragraph Writing : Topic Sentence, Inductive logic, and Deductive logic
- Essays: Narrative, Descriptive, Expository, and Persuasive
- Notice: Format, Characteristics, and 5 W's,
- Email: Structure, Characteristics of Effective Emails, and Advantages

Unit - C

1. Applied Grammar (in Socio-Cultural Context)

- Parts of Speech: Noun, Pronoun, Adjective, Verb, Adverb, Preposition, Conjunction, and Interjection
- Modals: Can, Could, May, Might, Will, Would, Shall, Should, and Must

Unit - D

1. Reading (Communicative Approach to be Followed)

Alleen Pace Nilsen: Sexism in English (Prose)

(Sub-topic: Relationship between Society & Language and Sexist Language)

2. Writing

Letter Writing: Formal and Informal

Teaching Methodology:

- a. **Grammar:** Grammar must be taught descriptively in socio-cultural context. The contextual teaching of grammar helps a learner understand the application of grammar rules in real life situations. The learner who learns grammar in isolation is unable to use the language fluently, whereas the learner who learns grammar in context uses the language confidently and fluently in real life situations.
- b. **Literary Texts:** Communicative approach should be followed to teach the texts. Classroom activities guided by the communicative approach are characterised by trying to produce meaningful and real communication, at all levels. As a result there may be more emphasis on skills than systems, lessons are more learner-centred, and there may be use of authentic materials.

Teachers can introduce the topic or theme of the text, pre-teach essential vocabulary items and use prediction tasks to arouse the interest and curiosity of students.

- c. **Writing:** Some of the strategies that should be adopted are as follows:
 - Regularly assign brief writing exercises in your classes.
 - Provide guidance throughout the writing process, i.e. Pre-Writing, Drafting, Revising, Editing, and Publishing.
 - Give students opportunities to talk about their writing.
 - Encourage students to revise their work.

Testing: The examinations will be conducted as per the norm of the university.

Course Title: Chemistry Laboratory
Course Code: CHE152

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objectives:

This course is intended to learn the basic concepts of Engineering Chemistry Laboratory. The present syllabus has been framed as per the recent research trends in the subject. The various experiments have been designed to enhance laboratory skills of the undergraduate students.

Course Outcomes:

CO-1 The course will turn the students into skilled hands where they can contribute in various ways, either by pursuing their career in the industry as a chemist or fulfilling their goals in academia by executing research projects.

CO-2 The course will help them to understand the basic objectives of experiments in engineering chemistry.

CO-3 Students will know and follow the proper procedures and regulation for safe handling and use of chemicals.

List of Experiments

1. Verify Lambert Beer's law using spectrophotometer and CoCl_2 or $\text{K}_2\text{Cr}_2\text{O}_7$ solution.
2. Determine the strength of HCl solution by titrating against NaOH solution conductometrically.
3. Determination of the strength of HCl solution by titrating against NaOH using pH meter.
4. Determination of total hardness of water (tap) using standard EDTA solution and Eriochrome black T indicator.
5. Determination of alkalinity of water.
6. Determination of surface tension of given liquid by using Stalagmometer.
7. Determination of residual chlorine in a water sample.
8. Determination of Flash & Fire point of given a given lubricating oil by Pensky-Marten's apparatus.
9. Determination of the viscosity of given lubricating oil by using Redwood Viscometer.
10. Preparation of a polymer phenol/urea formaldehyde resin.
11. Determination of moisture, volatile matter and ash content in a given sample of coal by proximate analysis.
12. Determination of dissolved oxygen present in given sample of water.

**Course Title: Computer Fundamentals and Programming
Laboratory
Course Code: CSE103A**

| L | T | P | Credits |
|----------|----------|----------|----------------|
| 0 | 0 | 2 | 1 |

Course Outcomes:

C01. Makes students gain a broad perspective about the uses of computers in engineering industry.

C02. Develops basic understanding of computers, the concept of algorithm and algorithmic thinking.

C03. Develops the ability to analyse a problem, develop an algorithm using control flow statements to solve it.

C04. Introduces the more advanced features of the C language such as functions, pointers and structure

Instruction for Students: The students will be attending a laboratory session of 2 hours weekly and they have to perform the practical related to the following list.

List of Experiments:

1. Introduction to various hardware components of computer.
2. Installation of any operating system.
3. Creation of any social account (Microsoft, Google etc.).
4. Introduction to MS-Office.
5. Introduction to basic structure of C program, utility of header and library files.
6. Implementation of program related to the basic constructs in C.
7. Programs using functions by passing values using call by value and call by reference method.
8. Program to illustrate the use of arrays in C.
9. Programs related to string handling in C.
10. Program to illustrate the use of pointers.

Course Title: Basic Communication Skills Laboratory
Course Code: ENG152A

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objectives:

- To improve the preparation and presentation competencies necessary for oral communication in a variety of contexts, as both a speaker and a listener.
- To improve pronunciation.
- To promote interactive skills through Group Discussions and role plays.

Course Outcomes:

CO1: Students will have developed listening skills.

CO2: Students will be able to articulate words and sentences clearly and efficiently.

CO3: Students will be able to pronounce clearly and correctly.

CO4: Students will show confidence in public speaking projects.

| Unit - A Speaking and Listening |
|---|
| • IPA for Language Learning - Basic Phonetics |
| • Movie-Clippings |
| • Role Plays |
| • Group Discussions |
| • Mock Interviews |

Project File: Each student will prepare a project file on any of the topics given by class teacher. Student should be able to justify the contents of his/her scrap file. The file must be handwritten, not typed. Students must acknowledge all the sources of information in his/her scrap file.

Testing: The end term lab. examination will be conducted as per the norm of the university. The distribution of marks in the end-term lab. examination is as follows:

| Component | Weightage |
|--|------------------|
| Project File Marks will be given for originality, creativity and presentation. Student will receive credit for his/her command of the language also. | 30 % |
| Lab. Activity | 30% |

| | |
|---|-------------|
| It may include dialogue writing (Dialogue to Prose and Prose to Dialogue), writing about a picture/some object, writing a report, writing on a topic of general interest, listening exercise, English phonetic exercise, etc. It will be decided by examiner on the spot. | |
| Viva Voce Questions will be based on the project file. Examiner may ask other non-technical questions related to student's life and interests. | 40% |
| Total | 100% |

For the final result, marks will be calculated as per the criterion laid down by the university:

| Component | Weightage |
|--|------------------|
| Marks Obtained in the lab examination | 80% |
| Continuous Assessment (Based on Student's Regularity & Class Performance) | 20% |
| Total | 100% |

Course Title: Engineering Mathematics-II
Course Code: MTH152A

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: The basic operations of complex numbers, De-Moivre's theorem, separation into real part and imaginary parts of various complex functions, and C+iS method for summation of series.

CO2: Multiple integrals and their applications to find area, volume, the center of gravity, the moment of inertia, and change of order of integration.

CO3: Vector calculus and its applications, del, gradient, curl and their applications, conversion of surface integral into a volume integral and vice-versa.

CO4: Convergence and divergence of series and tests to check the convergence of series, uniform convergence of series.

UNIT-A

Functions of Complex Variables: Complex Numbers and elementary functions of complex variable De-Moivre's theorem and its applications. Real and imaginary parts of exponential, logarithmic, circular, inverse circular, hyperbolic, inverse hyperbolic functions of complex variables. Summation of trigonometric series. (C+iS method).

(11Hours)

UNIT-B

Integral Calculus: Rectification of standard curves; Areas bounded by standard curves; Volumes and surfaces of revolution of curves;

Multiple Integrals: Double and triple integrals and their evaluation, change of order of integration, change of variable, Application of double and triple integration to find areas and volumes. Centre of gravity and Moment of inertia

(13Hours)

UNIT-C

Vector Calculus: Scalar and vector fields, differentiation of vectors, velocity and acceleration.

Vector differential operators: Del, Gradient, Divergence and Curl, their physical interpretations. Line, surface and volume integrals.

Application of Vector Calculus: Flux, Solenoidal, and Irrotational vectors. Gauss Divergence theorem. Green's theorem in the plane, Stoke's theorem (without proofs) and their applications

(13Hours)

UNIT-D

Infinite Series: Convergence and divergence of series, Tests of convergence (without proofs): Comparison test, Integral test, Ratio test, Raabe's test, Logarithmic test, Cauchy's root test, and Gauss test. Convergence and absolute convergence of alternating series, Uniform Convergence and Power Series
(11Hours)

COURSE NAME: Engineering Physics
COURSE CODE: PHY151B

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: The aim of this course on physics is to make the student of engineering understand the basic concepts of physics which will form the basis of certain concept in their respective fields.

Course Outcomes:

- 1 Attained knowledge of wave optics with particular emphasize on interference, diffraction, polarization
- 2 Attained understanding LASER, its working mechanism and various types. Knowledge of fibre optics
- 3 Gained insights of effect of the presence of dielectric medium
- 4 Obtained cognizance of superconductivity, Quantum Physics and Nanophysics

UNIT-A

PHYSICAL OPTICS:

Interference: Division of wave front, Fresnel's biprism, division of amplitude, Newton's rings and applications.

Diffraction: Difference between Fraunhofer and Fresnel diffraction, Fraunhofer diffraction through a slit, plane transmission diffraction grating, its dispersive and resolving power.

Polarization: Polarized and unpolarised light, double refraction, Nicol prism, quarter and half wave plates.

(12Hours)

UNIT-B

LASER: Spontaneous and stimulated emission, Laser action, Characteristics of laser beam, concept of coherence, He-Ne laser, Semiconductor laser, Ruby laser and applications, Holography.

FIBRE OPTICS: Propagation of light in fibres, numerical aperture, single mode and multimode fibres, applications

(13Hours)

UNIT-C

DIELECTRICS: Molecular Theory, polarization, displacement, susceptibility, dielectric coefficient, permittivity, relations between electric vectors, Gauss's law in the presence of a dielectric, energy stored in an electric field, Behaviour of dielectric in alternating field and Clausius-Mossotti equation.

(13Hours)

UNIT-D

QUANTUM MECHANICS: Difficulties with Classical physics, Introduction to quantum mechanics simple concepts, Black Body radiation, Planck's Law of radiation and its limitations, Group velocity and phase velocity, Schrodinger's wave equations and their applications.

NANOPHYSICS: Introduction to Nano science and Nanotechnology, Electron confinement, Nanomaterial, Nanoparticles, Quantum structure, CNT, Synthesis of Nanomaterial and Application of Nanomaterial.

SUPER CONDUCTIVITY: Introduction (experimental survey), Meissner effect, Type I and type II superconductors, London equation, Elements of BCS theory, Applications of superconductors.

Course Title: Mechanical Engineering Fundamentals
Course Code: MEC103

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: To impart the basic knowledge of thermodynamic principles, design principles, power transmission devices, power producing and power absorbing devices.

Course Outcomes (CO):

CO1: Understand and apply the different concepts of thermodynamic and heat transfer.

CO2: Understand the use of different pressure measuring units and devices.

CO3: Identify and recognize the different power transmission devices and machine elements and their applications.

CO4: Use the Knowledge of various power producing and power absorbing devices for their practical applications.

CO5: Familiarize and understand the terminology related to Mechanical Engineering.

UNIT-A

Fundamental Concepts of Thermodynamics

Introduction, Thermodynamic System and its types, Boundary and its types, Surroundings, Thermodynamic properties, State, Path, process and cycles, Thermodynamic Equilibrium, Working Substance, Microscopic and Macroscopic Analysis, Units and Dimensions, Quasi Static Process, Reversible and Irreversible processes, Point Function and Path Function, Mechanical and Thermodynamic work, P-dv Work (Displacement Work), Work is a Path Function, Equations for work done in various processes

Laws of Thermodynamics

Zerth law of Thermodynamics, Temperature, Thermometry (Measurement of temperature), Temperature Scales, Energy, Potential and Kinetic Energies at Micro and Macro Level, Internal Energy, Law of conservation of energy, Joule's Experiment, First law of thermodynamics (Open and Closed System), Energy – A property of system, Enthalpy, Entropy, Heat, Heat vs Temperature, specific heat, Heat Capacity, Specific heat at constant volume, Specific heat at constant pressure, Adiabatic Index, Limitations of first law of thermodynamics

(12Hours)

UNIT-B

Pressure

Pressure Concept and Definition, Pressure conversion Table, Atmospheric pressure, Standard Atmospheric Pressure, Gauge Pressure, Vacuum Pressure, Absolute pressure, Properties of fluid, Pressure head of a Liquid, Pascal's Law, Pressure measurement: Mechanical Gauges and Manometers, Mechanical Gauges: (Bourdon tube pressure gauge, Diaphragm pressure gauge, Dead weight), Manometers: (Principle/Advantage/Limitation/ Classification), Piezometer, Single U tube manometer (Numerical for Vacuum and Gauge pressure), [Simple problems on above topics]

Heat Transfer

Introduction, Heat Transfer vs Thermodynamics, Applications, Thermal Conductivity, Thermal Resistance, Modes of heat transfer, Spectrum of electromagnetic radiation, Surface emission properties, Absorptivity, Reflectivity and Transmissivity, Fourier law, Newton's law of cooling, Stefan Boltzmann's Law, Heat Exchangers (Applications, Selection, Classification), Thermal Insulation (Properties of insulation, Types of Insulations, Thermal Insulating Materials)

Power Absorbing Devices

Power Absorbing Devices, Difference between Hydraulic pump, Air compressor, Fan, Blower, Pump (Function, Selection, Applications), Classification of Pump, Positive displacement and Dynamic Pumps, Reciprocating Pumps and its types, Rotary Pumps and its types, Centrifugal Pump, Axial Pump

(12Hours)

UNIT-C

Power Producing Devices Boiler

States of matter, Changing State of Matter, Sublimation, Effect of temperature during change of Phase, Steam boiler, Application, Classification of boilers, Types of boilers (Brief Description), Essentials of a good boiler, Advantages of superheating the steam, Comparison between Water tube and Fire tube boilers, Function of boiler Mountings and Accessories

Turbines

Turbine, Classification based on working fluid, Classification of hydraulic turbines, Selection of hydraulic turbines, Impulse Turbines (Pelton Wheel/ Turgo/ Cross Flow), Reaction Turbines (Francis/ Kaplan/ Propeller)

Internal Combustion Engines

Heat Engine, Types of Heat Engine, Advantages, Disadvantages and Applications, Classification of IC Engine, Engine Components (Location, Function and Material), and Basic Terminology used in IC engine, Four stroke Cycle Engines (SI and CI), Two stroke Cycle Engines (SI and CI)

(12Hours)

UNIT-D

Principles of Design

Need of design, Product Life Cycle, Material properties and selection, Factors affecting material selection, Stress and Strain and its types, Hooke's law, Modulus of Elasticity, Longitudinal and Lateral Strain, Poisson's ratio, Stress- Strain Curve for ductile material and brittle material, Factor of Safety, Centre of Gravity, Centroid, Centroid of areas of plain, Figures (Without Derivation), Centroid of areas of composite sections (Without Derivation), Moment of Inertia, Radius of gyration, Theorem of perpendicular axis, Theorem of parallel axis, MI of L, I and T sections, [Simple problems on above topics]

Power Transmission Devices and Machine Elements

Individual and group drive system (advantages and Disadvantages), Belt drive (Types: V and Flat Belts and their Applications, Advantages and Disadvantages), Ropes drive (Types: Fiber and Wire Ropes and their Applications, Advantages and Disadvantages), Chain drive (Applications, advantages and Disadvantages, Sprockets), Gear drive (Types of Gears), Power transmission shafts, Types of shafts, Application of shafts, Axle, Keys (Function, Classification), Coupling (Function, Classification: Rigid and Flexible), Flanged coupling, Oldham's coupling, Universal coupling, Bearings and their types, Flywheel construction and types

(12Hours)

Course Title: Basic Electrical Engineering
Course Code: ELE105

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: This course provides basic knowledge of DC and AC Circuit Analysis and Network Theorems, Magnetic Circuits and various electrical devices & installation e.g. MCB, ELCB, MCCB, DC Machines, AC Machines etc.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Apply the knowledge of Electrical Engineering principles to solve DC and AC circuits.

CO2: Formulate and analyse electrical circuits. Understand basic principles of electromagnetism

CO3: Understand electrical machines and transformers

CO4: Identify and select various electrical machines according to the applications.

CO5: Apply the ethical principles for troubleshooting & installation of safety devices as per norms.

UNIT-A

D.C Circuit Analysis:

Voltage source, current source, dependent and independent sources, analysis of D.C circuit by KCL and KVL, Nodal and Mesh analysis, Superposition theorem, Maximum Power Transfer Theorem, Thevenin and Norton Theorems.

(12 Hours)

Unit-B

A.C Circuit Analysis:

Review of single phase A.C. circuit under sinusoidal steady state, RMS Value, Average Value, Form factor, Peak factor solution of RL, RC, R.L.C. Series circuit, the j operator, complex representation of impedance, solution of series circuit, series resonance, 3 phase A.C. Circuit, star and delta connections, line and phase quantities solution of 3 phase circuits, balance supply voltage and balanced supply voltage and balance load, Phasor diagram, measurement of power and power factor.

(14 Hours)

UNIT-C

Magnetic Circuit & Transformers:

B-H Curve, saturation leakage and fringing. Hysteresis and eddy currents. Single phase transformer, basic concepts constructional, voltage, current Transformation, Ideal transformer and its Phasor diagram, voltage regulation, OC/SC test, losses and efficiency, Autotransformer.

(14Hours)

UNIT-D

Rotating Electrical Machines:

Basic concepts, working principle and general construction of DC machines (motor/generators), torque and EMF expression. Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor.

Electrical Installations

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Various faults in Batteries, Elementary calculations for energy consumption, power factor improvement and battery backup.

(12 Hours)

Course Title: Human Values and General Studies

Course Code: SGS107B

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 0 |

Course Objective:

- a) To sensitize students about the role and importance of human values and ethics in personal, social and professional life.
- b) To enable students to understand and appreciate ethical concerns relevant to modern lives.
- c) To prepare a foundation for appearing in various competitive examinations
- d) To sensitize the students about the current issues and events of national and international importance
- e) To provide opportunity to the students to study inter disciplinary subjects like Geography, Science, Economy, Polity, History, International Relations etc.

Course Outcomes: On completion of the course, learner will be able to–

CO1: Making engineering and technology students aware of the various issues concerning man and society.

CO2: These issues will help to sensitize students to be broader towards the social, cultural, economic and human issues, involved in social changes

CO3: Able to understand the nature of the individual and the relationship between the self and the community

CO4: Understanding major ideas, values, beliefs, and experiences that have shaped human history and cultures

UNIT-A

Human Values

1. **Concept of Human Values:** Meaning, Types and Importance of Values.
2. **Value Education :** Basic guidelines for value education
3. **Value crisis and its redressal**

Being Good and Responsible

1. Self-Exploration and Self Evaluation
2. Acquiring Core Values for Self Development
3. Living in Harmony with Self, Family and Society
4. Values enshrined in the Constitution: Liberty, Equality
5. Fraternity and Fundamental Duties.

(10Hours)

UNIT-B

Value – based living

1. Vedic values of life
2. *Karma Yoga* and *Jnana Yoga*
3. *AshtaMarga* and *Tri-Ratna*

Ethical Living:

1. Personal Ethics
2. Professional Ethics
3. Ethics in Education

(12Hours)

UNIT-C

General Geography

World Geography

The Universe, The Solar System, The Earth, Atmosphere, The World we live in, Countries rich in Minerals, Wonders of the World, Biggest and Smallest.

Indian Geography

Location, Area and Dimensions, Physical Presence, Indian States and Union Territories, Important sites and Monuments, Largest-Longest and Highest in India.

General History

Glimpses of India History, Ancient Indian, Medieval India, Modern India, Various Phases of Indian National Movement, Prominent Personalities, Glimpses of Punjab history with special reference to period of Sikh Gurus

Glimpses of World History

Important Events of World History, Revolutions and Wars of Independence, Political Philosophies like Nazism, Fascism, Communism, Capitalism, Liberalism etc.

Indian Polity: Constitution of India

Important Provisions, Basic Structure, Union Government, Union Legislature and Executive, State Government: State Legislature and Executive, Indian Judiciary, The Election Commission, Panchayati Raj System, RTI etc.

General Economy

The process of liberalization, privatization, globalization and Major World Issues, Indian Economy, Indian Financial System, Major Economic Issues, Economic Terminology.

(12Hours)

UNIT-D

General Science

General appreciation and understandings of science including the matters of everyday observation and experience, Inventions and Discoveries

Sports and Recreation

The World of Sports and recreation, Who's Who is sports, Major Events, Awards and Honours. Famous personalities, Festivals, Arts and Artists

Current Affairs

National and International Issues and Events in News, Governments Schemes and Policy Decisions

Miscellaneous Information

Who is who?

Books and Authors, Persons in News, Awards and Honours, Abbreviations and Sports

(12Hours)

Course Title: Manufacturing Practice
Course Code: MEC104

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Objective:

1. Know basic workshop processes, Read and interpret job drawing.
2. Identify, select and use various marking, measuring, holding, striking and cutting tools & equipment's
3. Operate and control different machines and equipment's.

Course Outcomes (CO):

CO1: Explain and strictly adhere to the rules and safety regulations for work in the mechanical workshop.

CO2: Properly operate the manufacturing equipment in the mechanical workshop.

CO3: Create and document a typical process plan for manufacturing of a product in the mechanical workshop.

CO4: Read and use a manufacturing drawing as a definition for the manufacturing of a part.

CO5: Use gauging equipment to verify that a manufactured part fulfils the requirements specified on a manufacturing drawing.

CARPENTRY SHOP

- a) Preparation of half lap joint
- b) Preparation of Mortise and Tenon Joint
- c) Preparation of a Dove & Tail joint
- d) To prepare a White board duster

Welding Shop:

- a) Preparation of Joint by Arc Welding
- b) Preparation of Joint by using Gas Welding
- c) Preparation of Joint by MIG/ TIG Welding
- d) Preparation of Joint by Spot/ Seam Welding

Smithy Shop

- a) To Forge the L – Hook
- b) To Forge a Chisel
- c) To Forge a Cube from a M.S Round
- d) To forge a screw driver

Fitting Shop

- a) Filing a dimensioned rectangular or square piece and prepare a sq. fitting
- b) Preparation of T fitting male part
- c) Preparation of U fitting Female part
- d) Internal thread Cutting in Square piece and external thread cutting on a rod and assembling as a paper weight

Foundry Shop:

- a) To make a Mould of solid pattern
- b) To prepare a mould of sleeve fitting using gating system
- c) To make a Mould of Split Pattern using Cope & Drag
- d) To check the Hardness of the Mould
To check the Moisture Content in the Molding Sand
To check the Compressive Strength of Molding Sand

Sheet-Metal Shop

- a) Preparation of a funnel from G.I. sheet
- b) Preparation of a book rack stand from G.I. Sheet
- c) Preparation of a leak proof tray with inclined edges from G.I. Sheet
- d) Preparation of a square pen stand from G.I. Sheet with riveting at corners

Machine Shop

- a) To make a job using step turning and grooving

- b) To make a job using knurling and threading
- c) To make a multi operation job on a Lathe machine
- d) To make V – slot by using shaper machine

Electrical Shop

- a) Layout of electrical tube light wiring
- b) Layout of stair case wiring using two way switch
- c) Testing and rectification of simulated faults in electrical appliances such as ‘Electric Iron’ Ceiling Fan. Electric kettle
- d) To fabricate a circuit for the electrical wiring of, Fan with regulator and Bulb through a main switch and its testing using a series lamp

Course Title: Engineering Physics Laboratory
Course Code: PHY152A

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objective: The laboratory exercises have been so designed that the students learn to verify some of the concepts learnt in the theory courses. They are trained in carrying out precise measurements and handling sensitive equipment.

Course Outcomes: On the completion of the course the student will be able to

CO1: To Equip the students with the ability to handle the apparatus.

CO2: To make students cover the bridge between theory and practical by analysing the obtained data.

CO3: To import the Students knowledge of Graphical representation of obtained data.

Note:

- Students are expected to perform at least eight-ten experiments out of following list. The experiments performed in first semester cannot be repeated in second Semester.
- The examination for both the courses will be of 3 hours duration

List of Experiments:

Experimental skills: General Precautions for measurements and handling of equipment, representation of measurements, Fitting of given data to a straight line, and Error analysis, Significant figures and interpretation of results.

1. To determine the Refractive Index of the Material of a given Prism using Sodium Light.
2. To determine the Dispersive Power and resolving power of the Material of a given Prism using Mercury Light.
3. To determine wavelength of sodium light using Fresnel Biprism.
4. To determine wavelength of sodium light using Newton's Rings.
5. To determination Wavelength of Sodium Light using Michelson's Interferometer.
6. To determine the wavelength of Laser light using Diffraction of Single Slit.
7. To determine the wavelength of (1) Sodium and (2) Mercury Light using Plane Diffraction Grating.
8. To determine the (1) Wavelength and (2) Angular Spread of HeNe Laser using Plane Diffraction Grating.
9. To study the wavelength of spectral lines of sodium light using plane transmission grating.
10. To study the specific rotation of sugar solution Laurent's half shade Polari meter method
11. To study the numerical aperture and propagation losses using HeNe laser Optical fiber set up.
12. To compare the focal length of two lenses by Nodal slide method.
13. To find the unknown low resistance by Carey Foster bridge.
14. To determine the beam divergence of the HeNe laser.
15. To study the Meissner's effect in superconducting sample.
16. To study the Faraday law of electromagnetic induction.
17. To study the capacitance by flashing/quenching of Neon bulb kit
18. To compare the two unknown capacitances of two capacitors by using DeSauty's bridge.
19. To find our out the unknown inductance by using the Anderson's bridge method.
20. To study the numerical aperture and propagation losses for He-Ne laser by using the optical fibre set up for
21. To study the Planck's constant by using photoelectric cell method.

Course Title: Basic Electrical Engineering Laboratory
Course Code: ELE106

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objective: This course provides a practical aspect of Circuit Analysis using Ohm's law, Kirchhoff's laws and network theorems, to understand the constructional detail of Electrical machines.

Course Outcome: After successfully completing this course the students will be able to

CO 1: Identify DC and AC circuits.

CO2: Formulate and analyse electrical circuits for voltage, current and power measurements.

CO3: Apply the ethical principles for troubleshooting & installation of safety devices as per norms of engineering practice

CO4: Interpret basic principles of electromagnetism to implement in electrical machines and transformers.

CO5: Recognize and select various electrical machines according to the applications.

List of Experiments

1. To verify Ohm's Law, Kirchhoff's Current Law and Kirchhoff's Voltage Law.
2. To verify Thevenin's and Norton's theorems.
3. To verify Superposition theorem.
4. To verify Maximum Power Transfer theorem.
5. To study frequency response of a series R-L-C circuit and determine resonant frequency and Q-factor for various values of R, L and C
6. To study frequency response of a parallel R-L-C circuit and determine resonant frequency and Q-factor for various values of R, L and C.
7. To perform direct load test of a transformer and plot efficiency versus load characteristics.
8. To perform open circuit and short circuit test on transformer.
9. To perform speed control of DC motor.
10. Measurement of power in a three phase system by two wattmeter method.
11. To plot the V-I characteristics of PN-junction diode.
12. To verify the truth table of logic gates.
13. Basic safety precautions. Introduction and use of measuring instruments – voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors and inductors.
14. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor)

Course Title: Object Oriented Programming
Course Code: CSE201

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: To understand the basic concepts of object oriented programming language.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Describe the procedural and object-oriented paradigm with concepts of streams, classes, functions, data and objects.

CO2: Understand dynamic memory management techniques using pointers, constructors, destructors, etc.

CO3: Describe the concept of function overloading, operator overloading, virtual functions and polymorphism.

CO4: Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming.

CO5: Demonstrate the use of various OOPs concepts and file handling with the help of programs.

UNIT-A

Object-Oriented Programming Concepts

Introduction, comparison between procedural programming paradigm and object-oriented programming paradigm, Basic concepts of object-oriented programming — concepts of an object and a class, interface and implementation of a class, abstraction, encapsulation, data hiding, inheritance, overloading and polymorphism.

Arrays, Pointers and Functions

Array declaration, character array, multidimensional array, Declaring and initializing pointers, accessing data through pointers, arrays and pointers, types of pointers- generic, void and function, Pointers to pointers. Defining a function, Actual and Formal Arguments, Local and global variables, Nested functions, Recursive functions, Inline functions.

(11Hours)

UNIT-B

Classes and Objects

Specifying a class, creating class objects, accessing class members, access specifiers, static members, nested classes, local classes, abstract classes.

Constructors and Destructors: copy constructor, dynamic constructors, and explicit constructors.

Operator Overloading and Type Conversion

Overloading operators, rules for overloading operators, Overloading of various operators, Type conversion.

(11Hours)

UNIT-C

Inheritance

Introduction, defining derived classes, Types of inheritance, virtual base class, pure virtual functions, Friend functions, overriding member functions.

Polymorphism

Concept of binding - early binding and late binding, Virtual functions, abstract classes, Virtual destructors.

Standard Input/output Operations

Concept of streams, hierarchy of console stream classes, Input/output using overloaded operators >> and << of I/O stream classes, formatting output, Manipulators.

(12Hours)

UNIT-D

Working with Files

File streams, hierarchy of file stream classes, Error handling during file operations, Reading/writing of files, updating files.

Exception Handling

Review of traditional error handling, basics of exception handling, Exception handling mechanism, throwing mechanism, catching mechanism.

Standard Template Library

Overview of Standard Template Library, Containers, Iterators, Other STL Elements, Vectors.

(10Hours)

Course Title: Computer Organization & Architecture
Course Code: CSE209A

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: This course offers a good understanding of the various functional units of a computer system and prepares the student to be in a position to design a basic computer system.

Course Outcomes: After the completion of this course the participants will be able to:

CO1: Explain the organization of basic computer, its design and the design of ALU, control unit.

CO2: Demonstrate the working of central processing unit and RISC and CISC Architecture.

CO3: Describe the operations and language of the register transfer, micro operations and input- output organization.

CO4: Understand the organization of memory and memory management hardware.

CO5: Elaborate advanced concepts of computer architecture, Parallel Processing, pipelining, inter-processor communication and synchronization.

UNIT-A

Introduction

Basic organization of computers, Block level description of the functional units as related to the execution of a program; Fetch, decode and execute cycle.

Register Transfer and Micro operations

Register transfer language, Inter-Register Transfer, Arithmetic Micro-operations, Logic and Shift micro-operations Language, Control functions.

Arithmetic Logic Unit

Arithmetic, logic and shift micro operations. Constructing an arithmetic logic shift unit.

(10Hours)

UNIT-B

Basic Computer Architecture and Design

Computer registers, Computer Instructions-Instruction Set Completeness. Classifying Instruction Set Architecture. Basic steps of Instruction Execution. Hardwired Control. Micro programmed Control. Horizontal and Vertical Microprogramming. Interrupts.

Central Processing Unit

General Register Organization. Stack Organized CPU. Instruction Formats, Addressing Modes. Data Transfer and Manipulation, RISCVs CISC.

(10Hours)

UNIT-C

Pipelining

Parallel and pipeline Processing, Pipeline Control, Pipeline Implementations, Conflicts Resolution, and Pipeline Hazards. Vector Processing, and Array Processors.

Memory Organization

Memory Systems: principle of locality, principles of memory hierarchy Caches, associative memory, main memory, Virtual memory, Paging and Segmentation, Memory Interleaving.

(9Hours)

UNIT-D

Input Output Organization

I/O performance measures, types and characteristics of I/O devices, I/O Modes-Programmed I/O, Interrupt Initiated I/O and DMA. Buses: connecting I/O devices to processor and memory, interfacing I/O devices to memory, processor, and operating system.

Parallel Computers

Classification, SIMD, MIMD Organizations, Instruction and Arithmetic Pipeline, Parallel Processing.

Course Title: Data Structure and Algorithms
Course Code: CSE211

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective:-To impart knowledge of Data Structure and How to design Algorithms to solve different types of problems and to differentiate linear and nonlinear data structure.

Learning outcomes:-After reading data structure, student will be able to explain data structure and its scope in computer science. After completion of data structure, students will be able to:

CO1: Understand the concept of data structure, memory management, data types, Algorithms, Big O notation.

CO2: Understand basic data structures such as arrays, linked lists, stacks and queues.

CO3: Operations performed on linear and nonlinear data structures.

CO4: Solve problem involving graphs, trees and heaps

CO5: Apply Algorithm for solving problems like sorting, searching, insertion and deletion of data.

UNIT-A

Introduction

Basic terminology: Elementary Data Organizations, Data Structure Operations: insertion, deletion, traversal etc.; Analysis of an Algorithm, Asymptotic Notations, Time-Space trade off Algorithms, Control Structure and Complexity of Algorithms.

Array

Representation of Linear array in memory, Traversing linear Array, Searching Techniques: Linear search, Binary Search, Complexity of linear search and binary search and their analysis and 2D-Array, Representation of 2D-Array in memory. Records, Record Structures.

(9Hours)

UNIT-B

Linked List

Representation of Linear Linked List, Traversing a linked list, Operations on linked list, Memory Allocation, Garbage collection, Overflow and Underflow. Doubly linked list, Operations on 2-way linked list, Advantages and disadvantages of 2-way linked list, Circular Linked List, Header Linked Lists, types of header linked list and Application of linked list.

(10Hours)

UNIT-C

Stacks and Queues

Array representation of stacks/Operation on Stack: Push and pop, Arithmetic Expressions; Polish Notation, Evaluation of a postfix expression, Transforming infix expression into postfix expressions. Quick Sort: An Application of Stack, Complexity of Quick Sort, Recursion: Factorial function, Fibonacci sequence and Towers of HANOI. Representation of Queue, Operations performed on Queues, Deques and Priority Queues.

Trees

Basic terminology, Binary Trees, Complete Binary Trees, Extended Binary Trees: 2-Trees, Representation of binary trees in memory. Traversing Binary Trees: Pre order, In order and Post order. Binary Search Trees, Searching & Inserting in Binary Search Tree, Deleting in a binary search tree. Heap, Heapsort, deleting the root of a Heap, General trees and Computer representation of General trees. AVL Tree; Applications of Binary Trees. B Tree, B+ Tree.

(10Hours)

UNIT-D

Graph

Basic Terminology, Representation of Graph, Traversing of Graph: Breadth-First Search and Depth-First Search and Applications of Graphs etc.

Sorting and Hashing

Bubble Sort, Insertion Sort, Selection Sort, Merge Sort, Bucket Sort, Radix Sort, Hashing and Hash Function sets.

Course Title: Digital Electronics
Course Code: CSE231

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objectives: The purpose of this course is to develop a strong foundation in analysis and design of digital electronics.

Course Outcomes:

CO1:-Students will be able to represent numerical values in various number systems and perform number conversions between different number systems, various codes and operation of logic gates (AND, OR, NOT, NAND, NOR, XOR, XNOR)

CO2:-Students will demonstrate the knowledge of:

- Boolean algebra including algebraic manipulation/simplification, and application of DeMorgan's theorems.
- Karnaugh map and Q-M reduction method.
- Able to analyze and design digital combinational circuits including arithmetic circuits (half adder, full adder), decoders, encoders, multiplexers, and de-multiplexers, code converters.

CO3:- Students will Analyze the synchronous and asynchronous logic circuits such as flip flops, registers, and counters and able to understand/D and D/A converters.

CO4:- Students will be able to understand various types of memories and logic families.

UNIT-A

Number System and Binary Code: Introduction, Binary, Octal, Hexadecimal & some nonstandard Number:-Conversions, Addition, Subtractions, Multiplication, Division, Weighted- Non weighted codes, Signed - unsigned numbers, Binary Subtractions using 1's and 2's compliment, ASCII code, Excess 3 code, Grey code, BCD code and BCD additions & BCD Subtractions.

Minimization of logic function: Review of gates: - OR, AND, NOT, NOR, NAND, EX-OR, EX-NOR, Universal gates.

(12Hours)

UNIT-B

Minimization of logic function: Basic theorem of Boolean algebra, Sum of Products and Product of Sums, canonical form, Minimization using: - Boolean algebra, K-map and Q-M method.

Combinational Circuits: Introduction, Combinational circuit design, Encoders, decoders, Adders, Subtractors and Code converters, Parity checker, seven segment display, Magnitude comparators. Multiplexers, De-multiplexer, Implementation of Combinational circuit using MUX & De-MUX.

(12Hours)

UNIT-C

Sequential Circuits: Introduction, flip flops, Clocked flip flops, SR, JK, D, T and edge triggered flip-flops, Conversions of Flip flops, Shift Registers, Type of Shift Registers, Ring Counter, Twisted Ring Counter, Counters, Counter types, counter design with state equation and state diagrams. Serial to parallel

converter, parallel to serial converter, sequence generator, ripple(Asynchronous) counters, synchronous counters, counters design using flip flops, special counter IC's, asynchronous sequential counters, applications of counters.

D/A and A/D Converters: Introduction, Weighted register D/A converter, binary ladder D/A converter, steady state accuracy test, monotonicity test, D/A accuracy and resolution, A/D converter:- Simultaneous, Counter type, Continuous, Successive approximation, Single and dual slope A/D converter, A/D accuracy and resolution.

(10Hours)

UNIT-D

Semiconductor Memories: Introduction, Memory organization, Classification and characteristics of memories, Sequential memories, ROMs, R/W memories, Content addressable memories, PLA and PAL, charge de coupled device memory (CCD), commonly used memory chips, ROM as a PLD, complex Programmable logic devices (CPLDS), Field Programmable Gate Array (FPGA).

Logic Families: RTL, DCTL, DTL, Schottky TTL, TTL, ECL, CMOS and its various types, Comparison of logic families.

Course Title: Discrete Mathematics**Course Code: CSE235**

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: The purpose of this course is to develop a strong foundation in analysis and design of digital electronics, basic mathematic theories and their applications in Computer Science.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Analyse logical propositions via truth tables.

CO2: Determine properties of relations, identify equivalence and partial order relations, sketch relations.

CO3: Understand sets and perform operations and algebra on sets.

CO4: Define basic tree data structures and identify algorithmic functions associated with them

CO5: Define graphs, digraphs, and identify their main properties.

CO6: Evaluate combinations and permutations on sets.

UNIT-A

Set Theory and Logic: Propositional Logic, First Order Logic, Predicate Calculus and Qualifiers; Proof Methods; Sets, Functions, Relations, Cardinality, Induction and Recursion; Modular Arithmetic; Boolean algebra, Infinity and Diagonalisation.

(12Hours)**UNIT-B**

Coding Theory and Counting: Coding Theory: Error correcting coding, Hamming codes, Hamming bound; Basic Counting- Pigeon hole principle; advanced counting- recurrence relations, generating functions, inclusion –exclusion.

Information Theory and Probability: Basic information theory, entropy, inequality, mutual information, upper and lower bounds; Probability – sample space, conditional probability, variance, Markov, Chebyshev, probabilistic methods.

(14Hours)**UNIT-C**

Number System and Binary Code: Introduction, Binary, Octal, Hexadecimal & some nonstandard Number:-Conversions, Addition, Subtractions, Multiplication, Division, Weighted- Non weighted codes, Signed - unsigned numbers, Binary Subtractions using 1's and 2's compliment, ASCII code, Excess 3 code, Grey code, BCD code and BCD additions & BCD Subtractions.

Minimization of logic function: Review of gates: - OR, AND, NOT, NOR, NAND, EX-OR, EX-NOR, Universal gates.

(12Hours)**UNIT-D**

Graph Theory: Graphs and digraphs, incidence and adjacency matrices, isomorphism; Connectivity: Cut vertices, cut edges; Paths and Cycles; Traveling Salesman problem, diameter and maximum degree, shortest paths; Eulerian, Hamiltonian & Planar graphs, duality, Euler's formula, Kuratowski's theorem, Edge and vertex coloring; Trees- Binary and Spanning

Course Title: Object Oriented Programming Laboratory
Course Code: CSE205

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Describe the procedural and object oriented paradigm with concepts of streams, classes, functions, data and objects.

CO2: Understand dynamic memory management techniques using pointers, constructors, destructors, etc.

CO3: Describe the concept of function overloading, operator overloading, virtual functions and polymorphism.

CO4: Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming.

List of Experiments

1. Introduction to basic structure of C++ program, utility of header and library files.
2. Implementation of programs related to the basic constructs in C++
3. Programs using different data types in C++
4. Programs using Loops and Conditional Statements in C++
5. Programs using Manipulators in C++
6. Programs using arrays in C++.
7. Programs to illustrate the usage of pointers in C++
8. Programs to illustrate the types of functions in C++
9. Program to differentiate the usage of call by value method and call by reference method.
10. Programs related to string handling in C++
11. Programs to illustrate the concept of function and operator overloading
12. Program to demonstrate the objects of the class and their working
13. Programs to implement the working of constructor & destructor
14. Program to implement the concept of function overriding.
15. Programs to implement Inheritance and its types
16. Programs using early and late binding
17. Programs to show the working of abstract classes
18. Programs to show the working of Exception Handling
19. Program to illustrate the concept of File handling
20. At least one example of large program development.

This is only the suggested list of practicals. Instructor may frame additional practical relevant to the course contents.

Course Title: Data Structures Laboratory
Course Code: CSE213

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Objectives:-Algorithm development in all areas of data structures covered in the course. Emphasis should be given on the following matters. Development of recursive as well as non-recursive algorithms involving linked list trees and graphs. Use of pointers for dynamic allocations of storage. Development of classes for some of the data structures using the concept of abstract data types.

Course Outcomes: At the end of this lab session, the student will

C01: Be able to design and analyse the time and space efficiency of the data structure

C02: Be capable to identify the appropriate data structure for given problem

C03: Have practical knowledge on the applications of data structure

List of Experiments

- 1 W.A.P and algorithm to check whether the number is greater or not.
- 2 W.A.P and algorithm to print whether the given number is even or odd.
- 3 W.A.P and algorithm to check whether the entered number is prime or not.
- 4 W.A.P to perform various types of Arithmetic operations.
- 5 W.A.P to store the marks of a student in array and then print the result.
- 6 W.A.P to traversing of linear array.
- 7 W.A.P to implement Linear Search.
- 8 W.A.P to implement Binary Search.
- 9 W.A.P to implement Bubble Sort.
- 10 W.A.P to implement Selection sort.
- 11 W.A.P to generate the Fibonacci series using Array.
- 12 W.A.P to find the transpose of matrix.
- 13 W.A.P to addition, subtraction and multiplications of two matrix.
- 14 W.A.P to know length of given string.
- 15 W.A.P to demonstrate the operation performed on stack.
- 16 W.A.P to implement TOWER of HANOI.
- 17 W.A.P to implement PUSH and POP operations of stack.
- 18 W.A.P to evaluation of a Postfix Expression.
- 19 W.A. P to implement one-way linked list.
- 20 W.A.P to implement various operations performed on one-way linked list.
- 21 W.A. P to implement two- way linked list.
- 22 W.A.P to implement various operations performed on two-way linked list.
- 23 W.A.P to insert and delete node from graph.
- 24 W.A.P to implement Breadth First Search.
- 25 W.A.P to implement Depth First Search.

Course Title: Digital Electronics Lab

Course Code: CSE233

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objectives: To reinforce learning in the accompanying CSE231 course through hands-on experience with digital electronic circuit analysis, design, construction, and testing. To provide the student with the capability to use simulation tools in digital electronic circuit analysis and design.

Course Outcomes: To develop necessary skill in designing, analysing and constructing digital electronic circuits.

CO1: Learn the basics of gates.

CO2: Construct basic combinational circuits and verify their functionalities

CO3: Apply the design procedures to design basic sequential circuits

CO4: Learn about counters

CO5: Learn about Shift registers

CO6: To understand the basic digital circuits and to verify their operation

List of Experiments

1. Verification of the truth tables of TTL gates, e.g., 7400, 7402, 7404, 7408, 7432, 7486.
2. Verify the NAND and NOR gates as universal logic gates.
 - a) Verification of the truth table of the Multiplexer 74150.
 - b) Verification of the truth table of the De-Multiplexer 74154.
3. Design and verification of the truth tables of Half and Full adder circuits.
4. Design and verification of the truth tables of Half and Full subtractor circuits.
5. Design and test of an S-R flip-flop using NOR/NAND gates.
 - a) Verify the truth table of a J-K flip-flop (7476)
 - b) Verify the truth table of a D flip-flop (7474)
6. Operate the counters 7490, 7493 and 74194. Verify the frequency division at each stage and with a low frequency clock (say 1 Hz) display the count on LEDs.
7. Verify the truth table of decoder driver 7447/7448. Hence operate a 7 segment LED display through a counter using a low frequency clock.
8. Repeat the above with the BCD to Decimal decoder 7442 and an array of LEDs
9. Design and test D/A converter using R-2R Ladder Network
10. Study and test of A/D converter.

Course Title: Community Engagement Course
Code: CEC101

| L | T | P | Credits | Marks |
|---|---|---|---------|-------|
| 1 | 0 | 0 | 1 | 25 |

Course Objectives:

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

Course Outcomes: After completing this course, student will be able to

CO1: Gain an understanding of rural life, culture and social realities

CO2: Develop a sense of empathy and bonds of mutuality with local community

CO3: Appreciate significant contributions of local communities to Indian society and economy

CO4: Learn to value the local knowledge and wisdom of the community

CO5: Identify opportunities for contributing to community's socio-economic improvements

Course Weightages:

Seminar/Assignment/Project: 45%

Attendance: 5%

End Semester Examination: 50%

| | |
|--|---------|
| UNIT-A | 4 hours |
| Appreciation of Rural Society: Rural life style, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of "soul of India lies in villages" (Gandhi), rural infrastructure. Teaching Methodology: Classroom Discussions | 2 hours |
| Assignment: Prepare a map (physical, visual or digital) of the village you visited and write an essay about inter-family relations in that village. Mode of Assignment Submission: Written Assignment | 2 hours |
| UNIT-B | 5 hours |
| Understanding rural economy & livelihood: Agriculture, farming, land ownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets Teaching Methodology: Group Discussions in Class | 4 hours |
| Assignment: Describe your analysis of rural household economy, its challenges and possible pathways to address them. Mode of Assignment Submission: Written Assignment | 1 hour |
| UNIT-C | 4 hours |
| Rural Institutions: Traditional rural organisations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration. Teaching Methodology: Classroom Discussions | 2 hours |
| Assignment: How effectively are Panchayati raj institutions functioning in the village? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Mode of Assignment Submission: Group presentations of Assignment | 2 hours |
| UNIT-D | 4 hours |

| | |
|---|---------|
| <p>Rural Developmental Programmes: History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awaas Yojana, Skill India, Gram panchayat Decentralised Planning, NRLM, MNREGA, etc.</p> <p>Teaching Methodology: Classroom Discussions</p> | 2 hours |
| <p>Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community; give suggestions about improving implementation of the programme for the rural poor.</p> <p>Mode of Assignment Submission: Written Assignment</p> | 2 hours |

Course Title: Community Engagement Field Activities
Course Code: CEC102

| L | T | P | Credits | Marks |
|---|---|---|---------|-------|
| 0 | 0 | 1 | 1 | 25 |

Course Weightage:

Practical CA: 50%

End Term Practical Examination: 50%

The students are required to spend a total of 15 hours in field and select any 5 activities from among the following:

- Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities
- Visit MGNREGS project sites, interact with beneficiaries & interview functionaries at the work site
- Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures
- Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan (GPDP)
- Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization
- Visit Rural Schools / mid-day meal centres, study Academic and infrastructural resources and gaps
- Participate in Gram Sabha meetings, and study community participation
- Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries
- Attend Parent Teacher Association meetings, and interview school drop outs Fostering Social Responsibility & Community Engagement in Higher Education Institutions in India
- Visit local Anganwadi Centre and observe the services being provided
- Visit local NGOs, civil society organisations and interact with their staff and beneficiaries,
- Organize awareness programmes, health camps, Disability camps and cleanliness camps
- Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys
- Raise understanding of people's impacts of climate change, building up community's disaster preparedness
- Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants
- Formation of committees for common property resource management, village pond maintenance and fishing.

DAV UNIVERSITY, JALANDHAR

Course Title: System Programming
Course Code: CSE204A

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: The objective of this course is to provide the knowledge of one high level procedural language, assembly language and computer organization.

Course Outcomes: After the completion of this course the participants would gain the knowledge of:

CO1: To study about system programming and various types of system software.

CO2: Explanations of each phase of compiler

CO3: To study about assembler and components of assembly language.

CO4: To study about operating system concepts, Loaders and Editors.

UNIT-A

Introduction to System Programming: Definition of System Programming, Features of System Programming, System Programming v/s Application Programming, Compilation Process and Types of System software.

Assemblers: Elements of Assembly Language Programming, Format of assembly language statement, set of instructions, Machine instruction format, Types of assembly language: Imperative statements, Declaratives statements and Assembler directives with their types. Phases of Assembler: Analysis phase and Synthesis phase. Single pass assembler, two pass assembler with their databases. Design procedure for an Assembler.

(13Hours)

UNIT-B

Macros and Macro Processors: Macro Instructions, Macro Processor, Syntax for Macro call and features of a Macro facility. Pass 1 of Macro processor and Pass 2 of Macro processor and their Implementations.

Compilers: Aspects of Compilation, Compiler v/s Interpreter. Phases of compilation, Scanning and Parsing, Compilation of Expressions, Compilation of Control Structures Code Generation and Code Optimization Techniques, Compiler Writing Tools (Case study on LEX and YACC)

(12Hours)

UNIT-C

Loaders & Linkage Editors: Loading, Linking and Relocation, Types of loaders, Detailed Linking and Loading process in memory.

(8Hours)

UNIT-D

Editors and debuggers: Introduction to Editors, Types of Editors, Structure of an Editor, Debug monitors, Introduction to various debugging techniques, Turbo C++ Debuggers.

Grammar and automation: Introduction to grammar, types of grammar, acceptability of grammar, introduction to automation, characteristics of automation, finite control, transition system, finite automation.

(12Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Data Communication
Course Code: CSE206A

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: This course provides knowledge about various types of Network, Network Topologies, and protocols.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Understand the basics of data communication, networking, signals and Network Categories

CO2: To study about data models and usage of transmission media.

CO3: Error correction and detection techniques and analyze the services provided by protocols and features of various protocols in data networks.

CO4: To know about various routing algorithms used in network layer.

CO5: Recognize and use of various types of protocols used in transport layer and application layer

UNIT-A

Introduction

Data Communication: Components, Data Flow; Network Categories: LAN, MAN, WAN (Wireless / Wired); Network Software: Concept of layers, protocols, interfaces and services; Reference Model: OSI, TCP/IP and their comparison.

Physical Layer

Concept of Analog & Digital Signal; Bit rate, Bit Length; Transmission Impairments: Attenuation, Distortion, Noise; Data rate limits: Nyquist formula, Shannon Formula; Multiplexing: Frequency Division, Time Division, Wavelength Division; Transmission media: Twisted pair, coaxial cable, fiber optics, wireless transmission (radio, microwave, infrared); Circuit Switching & Packet Switching.

(14Hours)

UNIT-B

Data Link Layer

Error correction & Detection; Flow & Error Control; Sliding window protocols: Stop & Wait ARQ, Go back n ARQ, Selective repeat ARQ; Examples of DLL Protocols-HDLC, PPP; Medium Access Sub layer: Channel Allocation; Random Access: ALOHA, CSMA protocols; Controlled Access: Polling, Reservation, Token Passing.

(10Hours)

UNIT-C

Network Layer: Routing algorithms- Distance vector, Link State Routing, Hierarchical Routing, Broadcast & Multicast Routing; Congestion Control: Principles of Congestion Control, Congestion prevention policies, Leaky bucket & Token bucket algorithms.

(10Hours)

UNIT-D

Transport Layer: Addressing, flow control & buffering, multiplexing & de-multiplexing, crash recovery; Example transport protocols: TCP, SCTP and UDP.

Application Layer: Network Security; Domain Name System; Simple Network Management Protocol; Electronic Mail.

DAV UNIVERSITY, JALANDHAR

Course Title: Operating System Concepts
Course Code: CSE224A

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: This course should provide the students with good understanding of Operating System including its architecture and all its components.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Understand Functions, Services and structure of Operating Systems.

CO2: Understand processes, schedulers and explanation of CPU scheduling.

CO3: Understand issues related to Process Synchronization and focus on principles of Deadlock and related problems.

CO4: Comprehend the mechanisms used in Memory Management and Virtual Memory.

CO5: Understand the concepts of File System, secondary storage management and Disk Scheduling

UNIT-A

Introduction: What is an O.S., O.S. Functions; Different types of O.S.: batch, multi-programmed, time sharing, real-time, distributed, parallel; General structure of operating system, O/S services, system calls.

Process Management: Introduction to processes - Concept of processes, process scheduling, Process control block, operations on processes; Inter process communication, Critical sections, Semaphores, Message passing; CPU scheduling- scheduling criteria, preemptive & non-preemptive scheduling, Scheduling algorithms (FCFS, SJF, RR and priority). Multiprocessor scheduling: Real Time scheduling: RM and EDF.

(10Hours)

UNIT-B

Inter-process Communication: Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Strict Alternation, Peterson's Solution, The Producer-Consumer Problem, Semaphores, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem etc.

Memory Management: Background, logical vs. physical address space, swapping; contiguous memory allocation, internal & external fragmentation, memory-compaction, paging, segmentation, Virtual Memory, demand paging, page replacement, page replacement algorithms (FIFO, Optimal, LRU); Thrashing.

(10Hours)

UNIT-C

File Systems: Files - file concept, file structure, file types, access methods, File attributes, file operations; directory structure, allocation methods (contiguous, linked, indexed), free-space management (bit vector, linked list, grouping), Protection mechanisms.

Secondary Storage: Disk Structure, Disk Scheduling (FCFS, SSTF, SCAN, C-SCAN, and LOOK).

(10Hours)

UNIT-D

Deadlocks: Introduction to deadlocks, Conditions for deadlock, Resource allocation graphs, Deadlock Detection and Recovery, Deadlock Avoidance, Deadlock Prevention.

Case Studies: Brief introduction of MS-DOS, Windows (9x, XP, 2000), UNIX and LINUX

(9Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Microprocessor & its Applications
Course Code: ECE350

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objectives: The purpose of this course is to teach students the fundamentals, internal architectural details and functioning of microprocessors systems. The student will be able to incorporate these concepts into their electronic designs for other courses where control can be achieved via a microprocessor implementation.

Course Outcomes: Through the use of assembly language, by the end of the course students will become thoroughly familiar with the elements of microprocessor software and hardware. They will be able to:

CO1: Students will be able to represent numerical values in various number systems and perform number conversions between different number systems, various codes and operation of logic gates (AND, OR, NOT, NAND, NOR, XOR, XNOR)

CO2: Students will demonstrate the knowledge of: Boolean algebra including algebraic manipulation/simplification, and application of DeMorgan's theorems. Karnaugh map and Q-M reduction method. Able to analyze and design digital combinational circuits including arithmetic circuits (half adder, full adder), decoders, encoders, multiplexers, and de-multiplexers, code converters.

CO3: Students will Analyze the synchronous and asynchronous logic circuits such as flip flops, registers, and counters and able to understand/D and D/A converters.

CO4: Students will be able to understand various types of memories and logic families.

UNIT-A

Introduction

Introduction to Microprocessors, classification, recent microprocessors.

Microprocessor Architecture

8085 microprocessor Architecture. Bus structure, I/O, Memory & System buses, concept of address Bus, Data Bus & Control Bus, Synchronous & Asynchronous buses. Instruction execution sequence & Data Flow, Instruction cycle.

(14Hours)

UNIT-B

I/O memory interface

Data transfer modes: Programmable, interrupt initiated and DMA 8257, Serial & parallel interface, study of 8251 & 8255 programmable peripheral interfaces.

(14Hours)

UNIT-C

Instruction set & Assembly Languages Programming

Introduction, instruction & data formats, addressing modes, status flags, 8085 instructions, Data transfer operations, Arithmetic operations, Logical operations, Branch operations.

(14Hours)

UNIT-D

Case structure & Microprocessor application

Interfacing of keyboards and seven segment LED display, Microprocessor controlled temperature system (MCTS), Study of traffic light system, stepper motor controller.

Basic architecture of higher order microprocessor

Basic introduction to 8086, Architecture, Segmentation & addressing modes.

(14Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Engineering Mathematics-III
Course Code: MTH252A

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Understand the basic concept of periodic functions, even and odd functions, and Fourier series expansion of a function.

CO2: Laplace transform, Laplace transform of integrals, Laplace transform of derivatives, solution of ordinary linear differential equation with constant coefficients, and simultaneous differential equations.

CO3: The concept of partial differential equations, their formulation, their solutions and their applications in Heat, Wave and Laplace equations.

CO4: Understand the basic concepts of limits, continuity, derivability of complex functions, Cauchy Riemann equations, Taylor's and Laurent's expansion, and integration of functions of complex variable.

UNIT-A

Laplace Transforms

Laplace transforms of various standard functions, Linear property of Laplace transforms, Shifting property and change of scale, inverse Laplace transforms, transform of derivatives and integrals, Laplace transform of unit step function, impulse function, periodic functions, applications to solution of ordinary linear differential equations with constant coefficients, and simultaneous differential equations.

(14Hours)

UNIT-B

Fourier series

Periodic functions, Euler's formula. Dirichlet's conditions. Fourier series of discontinuous functions. Fourier series of Even and Odd functions, half range expansions, Fourier series of different wave forms, Complex form of Fourier series. Fourier Transformation.

(14Hours)

UNIT-C

Partial Differential Equations

Formulation of partial differential equations, Linear partial differential equations, homogeneous partial differential equations with constant coefficients. Wave equation and Heat conduction equation in one dimension. Two dimensional Laplace equation and their applications, solution by the method of separation of variables.

(14Hours)

UNIT-D

Functions of Complex Variable

Limits, continuity and derivative of the function of complex variable, Analytic function, Cauchy-Riemann equations, conjugate functions, and harmonic functions.

Conformal Mapping

Definition, standard transformations, translation, rotation, inversion, bilinear.

Complex Integration

Line integrals in the complex plane, Cauchy's theorem, Cauchy's integral formula and derivatives of analytic function. Taylor's and Laurent's expansions (without proofs), singular points, poles, residue, Integration of function of complex variables using the method of residues.

(14Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: System Programming Laboratory
Course Code: CSE218

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Outcomes: After completion of this course, a student will be able to:

CO1: Understand the basic concept of compiler design

CO2: To know the working of the assembler

CO3: Design and implement system utility programs

CO4: Develop skills to write program using system services

List of Experiments

1. Design and Implementation of an Editor in any language.
2. Design and Implementation of Pass1 of Two Pass Assembler in any language.
3. Design and Implementation of Pass2 of Two Pass Assembler in any language.
4. Design and Implementation of One Pass Assembler in any language.
5. Design and implementation of Symbol Table(create, insert, delete, search, modify functions)
6. Implementation of Lexical Analyzer.
7. Implementation of Parser in any language.
8. Design and Implementation of Two Pass Macro- Processor.
9. Programming using LEX and YACC.
10. Design and Implementation of a Loader.

This is only the suggested list of practical. Instructor may frame additional practical relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Operating Systems Concepts Laboratory
Course Code: CSE226A

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Objectives:

- Analyse the working of an operating system, its programming interface and file system.
- Develop algorithms for process scheduling, memory management, page replacement algorithms and disk scheduling

Course Outcomes: After completion of this course, a student will be able to:

CO1: Analyse process management and simulate CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority, Deadlock management.

CO2: Implement memory management schemes and page replacement schemes.

CO3: Implement file allocation methods and disk scheduling algorithms.

CO4: Experiment with UNIX commands and shell programming

List of Experiments

1. Basic CMD commands using command line interface
2. Simulation of the CPU scheduling algorithms
 - a) Round Robin
 - b)SJF
 - c)FCFS
 - d)Priority
3. Simulation of MUTEX and SEMAPHORES.
4. Simulation of Bankers Deadlock Avoidance and Prevention algorithms.
5. Implementation of Process Synchronization (Reader-Writer, Sleeping Barber and Dining Philosopher's Problem)
6. Simulation of page Replacement Algorithms a)FIFO b)LRU c)LFU
7. Simulation of paging techniques of memory management.
8. Simulation of file allocation Strategies a)Sequential b)Indexed c)Linked
9. Simulation of file organization techniques
 - a) Single Level Directory
 - b)Two Level
 - c)Hierarchical
 - d)DAG
10. Basic Introduction to Linux Operating System and Shell scripting.

This is only the suggested list of Practicals. Instructor may frame additional Practicals relevant to the course contents.

DAV UNIVERSITY, JALANDHAR

Course Title: Microprocessor & its Applications Laboratory
Course Code: ECE351

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objective: This laboratory will provide the students a perfect introduction to the world of Microprocessors and to provide hands-on experience essential to the real understanding of microprocessors architecture and it's interfacing to the peripheral devices. The experiments are designed to provide the students with the design principles of microprocessor systems. The course accomplishes this by using microprocessor kits.

Course Outcomes: At the end of the course, students will develop ability to

CO1: Understand the fundamentals of assembly level programming of microprocessors & microcontrollers knowledge

CO2: Apply the programing knowledge for arithmetic and logical operations in 8085

CO3: Develop the programs for finding 1's and 2's compliments

CO4: Develop the programs for string manipulation, stepper motor control and seven segment display

List of Experiments:

1. Introduction to 8085 kit.
2. Addition of two 8 bit numbers, sum 8 bit.
3. Subtraction of two 8 bit numbers.
4. Find 1's complement of 8 bit number.
5. Find 2's complement of 8 bit number.
6. Shift an 8 bit no. by one bit.
7. Find Largest of two 8 bit numbers.
8. Find Largest among an array of ten numbers (8 bit).
9. Sum of series of 8 bit numbers.
10. 8255 PPI.
11. Seven segment display
12. Traffic light.
13. Stepper motor control

DAV UNIVERSITY, JALANDHAR

Course Title: Data Communication Laboratory
Course Code: CSE220

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Outcomes: After completion of the course, the students will be able to:

CO1: Student will be able to understand network communication using the layered concept, Open System Interconnect (OSI) and the Internet Model.

CO2: Student will be able to design network communication cables like straight, rollover and cross cables.

CO4: Student will understand the working principles of LAN and the concepts behind physical and logical addressing, subnetting and super netting.

CO5: Student shall understand the principles and operations behind various application layer protocols like HTTP, SMTP, and FTP.

List of Experiments

1. Making Straight, Rollover and Cross-Over cables
2. Cable & RJ-45 Jack outlet installation
3. Basic LAN Setup and IP Addressing
4. Write a program for error detecting code using CRC
5. Write a program for Hamming Code generation for error detection and correction
6. Write a program for congestion control using Leaky bucket algorithm.
7. Study of Amplitude Modulation
8. Study of Frequency Modulation
9. Study of ASK Modulation
10. Study of FSK Modulation
11. Implementation of STOP and Wait protocol
12. Implementation of Sliding Window protocol

This is only the suggested list of practicals. Instructor may frame additional practicals relevant to the course

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Networks
Course Code: CSE301

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: This course should provide the knowledge of various networking components, protocols and their working.

Course Outcomes: Through this course students should be able to

CO1. Analyze the requirements for a given organizational structure and select the most appropriate networking architecture and technologies.

CO2. Have a basic knowledge of the use of cryptography and network security

CO3. Analyze, specify and design the topological and routing strategies for an IP based networking infrastructure

CO4. Specify and identify deficiencies in existing protocols, and then go onto formulate new and better protocols

UNIT-A

Introduction: Introduction to Computer Network, Logical Addressing: IPv4 and IPv6; Packet Formats & their comparison: IPv4 and IPv6, Subnetting and Super netting

ATM: Protocol Architecture, ATM Logical Connections, ATM Cells, Transmission of ATM Cells, ATM Adaptation Layer, Traffic and Congestion Control, ATM LAN Emulation

(8Hours)

UNIT-B

Internetworking: Principles of Internetworking, Connectionless Internetworking, the Internet Protocol, Routing Protocol, IPv6 (IPng), ICMPv6

Distributed Applications: Abstract Syntax Notation One (ASN.1), Network Management-SNMPV2, Electronic Mail-SMTP and MIME, Uniform Resource Locators (URL) and Universal Resource Identifiers (URI), Hypertext Transfer Protocol (HTTP)

(8Hours)

UNIT-C

Network Layer and Routing: Network Service model – Datagram and Virtual circuit service-Routing principles-Link state routing-distant vector routing-hierarchical routing-multicast routing-IGMP Internet Protocol (IP): IPv4 addressing-routing and forwarding datagram-datagram format-datagram fragmentation- ICMP- DHCP- Network Address Translators (NATs)-IPv6 packet format-transition from IPv4 to IPv6-Mobile IP. Routing in the Internet: Intra Autonomous System Routing: RIP and OSPF-Inter Autonomous System Routing: BGP – Network layer in ATM.

(10Hours)

UNIT-D

Transport Layer: Transport Layer Services-Relationship between Transport Layer and Network Layer-Transport Layer in Internet-Multiplexing and De multiplexing.

Connectionless Transport: UDP-Segment structure-Checksum

Connection Oriented Transport: TCP-TCP connection-TCP Segment Structure-Round trip Time estimation and Time out-Reliable Data transfer-Flow control-TCP connection Management. Congestion Control: Causes and costs of congestion- Approaches to congestion control- TCP congestion control: Fairness-TCP delay modeling. ATM ABR congestion control.ATM AAL Layer protocols.

Application Layer and Network Security: Application Layer Protocols - WWW and HTTP-File transfer Protocol: FTP Commands and Replies – Domain Name System (DNS)- SMTP - SNMP- multimedia. Remote Procedure Call. Security in Computer Networks: Principles of Cryptography-Symmetric key-Public key-authentication protocols -Digital Signatures – Firewalls. Security in different Layers: Secure E-mail- SSL – IP security.

Course Title: Database Management System
Course Code: CSE303C

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective:

- To study the physical and logical database designs, database modeling, relational, hierarchical, and network models
- To understand and use data manipulation language to query, update, and manage a database
- To develop an understanding of essential DBMS concepts such as: database security, integrity, concurrency, distributed database, and intelligent database, Client/Server (Database Server), Data Warehousing.
- To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Model Entity-Relationship diagrams for enterprise level databases

CO2: Formulate Queries using SQL and Relational Formal Query Languages

CO3: Apply different normal forms to design the Database

CO4: Summarize concurrency control protocols and recovery algorithms

UNIT-A

Introduction to Database Systems: Introduction to Database Systems: Introduction and applications of DBMS, Purpose of database, Data Independence, Database System architecture- levels, Mappings, Database users and DBA, File Systems Versus a DBMS, Advantages of a DBMS, DBMS Layers, Data independence.

Relational query languages: Relational algebra, Tuple and domain relational calculus.

(10Hours)

UNIT-B

Data Models: Data Models Relational Model, Network Model, Hierarchical Model, ER Model: Entities, Attributes and Entity Sets, Relationships and Relationship Sets, Constraints, Weak Entities, Comparison of Models, Database Design with the ER Model, Keys.

(9Hours)

UNIT-C

Database Design: Normalization and Normal Forms, Various dependencies in database (i.e. Functional dependencies, Multi-valued Dependency, Join Dependency, etc.) First, Second and Third Normal Forms, BCNF, Fourth and Fifth Normal Forms, Armstrong's axioms, Dependency preservation, Lossless design.

Transaction Management: ACID Properties, Serializability, Two-phase Commit Protocol, Concurrency Control, Lock Management, Lost Update Problem, Inconsistent Read Problem, Read-Write Locks, Deadlocks Handling, 2PL protocol and Introduction to Database Recovery and its techniques.

(10Hours)

UNIT-D

Database Protection: Database Threats, Access Control Mechanisms, Grant and Revoke, Firewalls, Encryption and Digital Signatures, Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection.

Course Title: Software Engineering
Course Code: CSE333

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: To understand the basic concepts of software engineering and software development life cycle.
Course Outcomes: Students will learn about the different activities of software development and about the risk management. They will get aware about the different case tools.
CO1: Plan a software engineering process life cycle, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements
CO2: Able to elicit, analyse and specify software requirements through a productive working relationship with various stakeholders of the project
CO3: Analyse and translate a specification into a design, and then realize that design practically, using an appropriate software engineering methodology.
CO4: Know how to develop the code from the design and effectively apply relevant standards and perform testing, and quality management and practice
CO5: Know how to manage the risks, ensures quality management and able to manage modern engineering tools.

UNIT-A

Introduction to Software Engineering: Software Problem, Software Engineering, Approach, Software process, Characteristics of Software Engineering Process, Software Applications, Software Crisis: Problem and Causes.

Software Development Life Cycle:

The waterfall model, Incremental process models, Evolutionary process models, Spiral Model.

Requirements engineering process: Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management.

(9Hours)

UNIT-B

Software Requirements: Functional and non-functional requirements, User requirements, System requirements, Interface specification, documenting Software Requirement Specification (SRS).

Software Project Planning: Cost estimation, cost estimation models, Project scheduling, Software Configuration management, Team Structure, Risk Management.

System models: Context Models, Behavioural models, Data models, Object models, structured methods

Design Engineering: Design Concepts, design models for architecture, component, data and user interfaces; Problem Partitioning, Abstraction, Cohesiveness, Coupling, Top Down and Bottom Up design approaches; Functional Versus Object Oriented Approach, Design Specification, 4GL.

(10Hours)

UNIT-C

Creating an architectural design:

Software architecture, Data design, Architectural styles and patterns, Architectural Design

Object-Oriented Design:

Objects and object classes, An Object-Oriented design process, Design evolution.

Performing User interface design:

Golden rules, User interface analysis and design, interface analysis, interface design steps, Design evaluation

Coding and Testing Strategies:

Code reviews, A strategic approach to software testing, test strategies for conventional software, Black-Box and White-Box testing, Validation testing, System testing, the art of Debugging.

Product metrics: Software Quality, Metrics for Analysis Model, Metrics for Design Model, Metrics for source code, Metrics for testing, Metrics for maintenance. **Metrics for Process and Products:** Software Measurement, Metrics for software quality

(10Hours)

UNIT-D

DAV UNIVERSITY, JALANDHAR

Risk Management: Reactive vs. Proactive Risk strategies, software risks, Risk identification, Risk projection and risk refinement.

Quality Management:

Quality concepts, Software quality assurance, Software Reviews, Formal technical reviews, Statistical Software quality Assurance, Software reliability, The ISO 9000 quality standards.

CASE Tools: Types of CASE tools, advantages and components of CASE tools, Unified Modelling Language (UML)

DAV UNIVERSITY, JALANDHAR

Course Title: Algorithm Design & Analysis
Course Code: CSE307A

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Describe the basic concepts of the algorithms and analyze the worst-case running times of algorithms using asymptotic analysis.

CO2: Use divide-and-conquer techniques for solving suitable problems.

CO3: Describe the greedy paradigm and explain when an algorithmic design situation calls for it.

CO4: Apply dynamic programming and backtracking approaches to solve suitable problems.

CO5: Able to Explain the major graph algorithms and Employ graphs to model engineering problems, when appropriate. Able to describe the classes P, NP, and NP-Complete.

Unit-A

Introduction

Concept of Algorithm, Role of Algorithms in Computing, Algorithm Specification, Performance Analysis (Time and space complexities), and Growth of functions: Asymptotic Notation, Standard notation & common functions; Introduction to Recurrences: substitution method, recursion-tree method, master method, Brute-Force, Branch and Bound, Randomizing Algorithms, Depth First Search (DFS) and Breadth First Search (BFS), Topological sorting, Divide and Conquer, General Method, Binary Search, Merge sort, Quick sort, Selection sort.

(10Hours)

Unit-B

Greedy Algorithms: Elements of Greedy strategy, Activity Selection Problem, Knapsack problem, Minimum Cost Spanning Trees (Prim's Algorithm, Kruskal's Algorithm), Single source Shortest paths problem and analysis of these problems.

(9Hours)

Unit-C

Dynamic Programming: Elements of dynamic programming, Assembly-line scheduling problem, Matrix-chain multiplication, Multistage Graph, All Pairs Shortest paths, Longest common subsequence, Bin Packing, 0/1 Knap Sack and Travelling Salesman Problem.

(10Hours)

Unit-D

Back Tracking: General method, 8 queen's problem, Graph coloring and Hamiltonian Cycles, 0/1 Knap Sack Problem, NP-Completeness, Polynomial Time, polynomial-time verification, NP completeness & reducibility, NP-complete problems, Cook's theorem, Approximation algorithms.

(10Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Graphics
Course Code: CSE335

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Outcomes: Through this course students should be able to

CO1. Classify and describe various Computer Graphics tools and techniques.

CO2. Analyze and apply various algorithms of 2D and 3D Transformations on different type of objects.

CO3. Determine and apply appropriate 2D and 3D clipping algorithms and various projection techniques on different types of objects.

CO4. Observe and Understand and differentiate various visibility and shading techniques and models.

UNIT -A

Introduction: Introduction, Application areas of Computer Graphics, overview of graphics systems, video-display devices, and raster-scan systems, random scan systems, graphics monitors and work stations and input devices.

Scan Conversion: Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms. Filled area primitives: Scan line polygon fill algorithm, boundary-fill and flood-fill algorithms

(10Hours)

UNIT- B

Two dimensional transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations

Two dimensional viewing and Clipping: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland – Hodgeman polygon clipping algorithm

Three dimensional transformations: Geometric transformations, shear transformations, composite transformations.

Projections: Perspective Projection and Parallel projection

Three dimensional Viewing: Three dimensional Viewing, clipping, Viewing transformations.

(12Hours)

UNIT-C

Curve and Surface design: Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-Spline curves, Bezier and B-Spline surfaces

Hidden Surfaces: Z-Buffer algorithm, back-face detection, scan-line, The Painter's algorithm, area sub-division rendering of mathematical surfaces

(10Hours)

UNIT-D

Color and Shading models: Introduction to shading models- Light and Colour, The Phong model, Interpolative shading models, Texture, Ray tracing

(5Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Networks Laboratory
Course Code: CSE319

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Description and Objective:

The objective of this lab course is to get practical knowledge of working principles of various communication protocols. Analyse structure and formats of TCP/IP layer protocols using network simulators like OPNET/NS2 and network simulators. Implementing various network algorithms such as error control, error detection, routing, and security related algorithms.

Course Outcomes:

CO1: Understand the practical approach to network communication protocols.

CO2: Understand network layers, structure/format and role of each network layer.

CO3: Able to design and implement various network application such as data transmission between client and server, file transfer, real-time multimedia transmission.

CO4: Understand the various Routing Protocols/Algorithms and Internetworking.

List of Experiments

1. Introduction to Network Simulator OPNET/NS2.
2. Designing & Implementing LAN using sub netting.(IPv4 AND IPv6)
3. Evaluate Ethernet Delay and Load Statics of Switched Ethernet
4. Evaluate the comparative investigations on the performance issues of switched Ethernet with VLAN based on Email and FTP applications.
5. Evaluate Internet connection choice for PC Network on different Data Rate for WAN based on Web Browsing and Email application
6. Implementation of Firewall; in a Network.
7. Simulation of Wireless data Network with different with physical characteristics.
8. Implementation of CSMA/CD Protocol and its comparative investigation with ALOHA Protocol.
9. Design and Implementation of Simple Transfer Protocol in C/ C++.
10. Design of substitution Cipher in C/ C++.
11. Design of Transposition Cipher in C/ C++.
12. Design of Public Key Algorithm in C/ C++.

DAV UNIVERSITY, JALANDHAR

Course Title: Database Management System Laboratory
Course Code: CSE321

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Objectives: The objective of this lab course is to understand the practical applicability of database management system concepts.

Course Outcomes: After successfully completing this course the students will be able to

CO1. Understand practical knowledge on designing and creating relational database systems using SQL.

CO2. Formulate queries using SQL DML/DDDL commands.

CO3. Formulate queries using different Logical and SQL operators.

CO4. Understand the various queries execution such as Aggregating, character, number functions, and group functions, constraints, set operations joins, views and data type conversion.

CO5. Understand the concept of Sub queries, Nested Queries and saving of data using Rollback, Commit

List of Experiments

1. Introduction to SQL and its Data Types.
2. Write the queries for Data Definition and Data Manipulation language.
3. Write SQL queries using Logical operators (=, <, >, etc.).
4. Write SQL queries using SQL operators (Between, AND, IN (List), Like, ISNULL and also with negating expressions).
5. Write SQL query using character, number and group functions.
6. Write SQL queries for Relational Algebra (UNION, INTERSECT, and MINUS, etc.).
7. Write SQL queries for extracting data from more than one table (Equi-Join, Non-Equi- Join , Outer Join)
8. Write SQL queries for sub queries, nested queries(using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET)
9. Concepts for ROLL BACK, COMMIT & CHECK POINTS.
10. Creation, altering and dropping of tables and inserting rows into a table (use constraints while creating tables) examples using SELECT command.
11. Queries (along with sub Queries) Constraints. Example: - Select the roll number and name of the student who secured fourth rank in the class.
12. Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING clauses.
13. Queries using Conversion functions (to_char, to_number and to_date), string functions (Concatenation, lpad, rpad, ltrim, rtrim, lower, upper, initcap, length, and substr), date functions (Sysdate, next_day, add_months, last_day, months_between, least, greatest, trunc, round, to_char, to_date)
14. Create Views, Cursors, And Triggers and Stored Procedures in PL/SQL.

* **Students are advised to use Developer 2000/Oracle-10i or higher version or other latest version for above listed experiments. This is only the suggested list of Practicals. Instructor may frame additional Practicals relevant to the course contents**

DAV UNIVERSITY, JALANDHAR

Course Title: Algorithm Design & Analysis Laboratory
Course Code: CSE339A

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objective: To get a first-hand experience of implementing well-known algorithms in a high-level language. To be able to compare the practical performance of different algorithms for the same problem.

Course Outcomes: Upon the completion of course students will be able to:

CO1: Identify the problem given and design the algorithm using various algorithm design techniques.

CO2: Implement various algorithms in a high level language.

CO3: Analyse the performance of various algorithms.

CO4: Compare the performance of different algorithms for same problem.

List of Experiments:

1. Code and analyse to compute the greatest common divisor (GCD) of two numbers.
2. Code and analyse to find the median element in an array of integers.
3. Code and analyse to find the majority element in an array of integers.
4. Code and analyse to find the edit distance between two character strings using dynamic programming.
5. Code and analyse to find an optimal solution to matrix chain multiplication using dynamic programming.
6. Code and analyse to do a depth-first search (DFS) on an undirected graph.
7. Code and analyse to do a breadth-first search (BFS) on an undirected graph.
8. Code and analyse to find shortest paths in a graph with positive edge weights using Dijkstra's algorithm.
9. Code and analyse to find shortest paths in a graph with arbitrary edge weights using Bellman-Ford algorithm.
10. Code and analyse to find the minimum spanning tree in a weighted, undirected graph.

This is only the suggested list of programs. Instructor may frame additional Practicals relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Computer Graphics Laboratory
Course Code: CSE337

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Outcomes: Through this course students should be able to

CO1. Design scan conversion problems using C/C++/Python programming

CO2. Analyse and apply various algorithms of 2D Transformations on different type of objects in C/C++/Python Programming.

CO3. Determine and apply appropriate 2D clipping algorithms on line

CO4. Understand the practical implementations of the Bezier Curve

List of Experiments

1. To draw a line using DDA Algorithm.
2. To draw a line using Bresenham's Algorithm.
3. To draw a circle using trigonometric Algorithm.
4. To draw a circle using Bresenham's Algorithm.
5. To draw a circle using Midpoint Algorithm.
6. To draw an ellipse using Trigonometric Algorithm.
7. To draw an ellipse using Midpoint Algorithm.
8. To translate an object with translation parameters in X and Y directions.
9. To scale an object with scaling factors along X and Y directions.
10. To rotate an object with a certain angle.
11. To perform composite transformations of an object.
12. To clip line segments against windows.
13. Demonstrate the properties of Bezier Curve.

This is only the suggested list of programs. Instructor may frame additional practical relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Theory of Computation
Course Code: CSE302A

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: To understand the basic concepts of grammar, automata, languages and expressions.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Describes the basic concepts of Finite Automata, DFA and N DFA, Mealy and Moore Machines.

CO2: Describes the notion of Grammar and Regular Expressions.

CO3: Describes the fundamentals of Context free Grammar and Languages with different normal forms for Context Free Grammars.

CO4: Describes the basic concept of Pushdown Automata.

CO5: Describes the basic concept of Turing Machines

UNIT- A

Sets, Relations and Languages: Sets, Relations and functions, finite and infinite sets, Closures and algorithms, alphabets and languages

Finite Automata: Finite automata and its applications, Deterministic Finite Automata (DFA), Non Deterministic Finite Automata (N DFA), Conversion of N DFA to DFA, Moore and Mealy Machine, Conversion from Mealy to Moore and Moore to Mealy.

(10Hours)

UNIT- B

Grammar: Definition of Grammars, Derivation & Language generated by Grammars, Chomsky Classification of Languages

Regular Expression and Languages: Regular expression, finite Automata and Regular expression, Properties of Regular Languages, Pumping lemma for regular languages, application of pumping lemma, Closure properties of regular languages, Minimization of finite Automata

(10Hours)

UNIT-C

Context free Grammar and Languages: Context free grammar: Parse Trees, Ambiguity in Grammar and Languages, Construction of Reduced Grammars

Properties of Context free languages – Normal forms for Context Free Grammars, Chomsky Normal Form (CNF), and Greibach Normal Form (GNF)

(9Hours)

UNIT- D

Pushdown Automata: Pushdown Automata: Deterministic Push down Automata, Equivalence of Push Down automata and Context free Grammar.

Turing Machines: Definition of Turing Machine, Application of Turing Machine in language accepting and computing.

(9Hours)

Course Title: Data Mining

Course Code: CSE312A

Course Objective: This course will be an introduction to data mining. Topics will range from statistics to database, with a focus on analysis of large data sets. Another objective is to study the methodology of engineering legacy databases for data warehousing and data mining to derive business rules for decision support systems.

Course Outcomes:

CO1: Identify the scope and necessity of Data Mining & Warehousing for the society

CO 2: Describe the designing of Data Warehousing so that it can be able to solve the root problems.

CO3: To understand various tools of Data Mining and their techniques to solve the real time problems. .

CO4: To develop ability to design various algorithms based on data mining tools.

CO5: To develop further interest in research and design of new Data Mining techniques.

UNIT-A

Introduction: Data Mining Concepts, Input, Instances, Attributes and Output, Knowledge Representation & Review of Graph Theory, Lattices, Probability & Statistics

Machine learning concepts and approaches: Supervised Learning Framework, concepts & hypothesis, Training & Learning, Boolean functions and formulae, Monomials, Disjunctive Normal Form & Conjunctive Normal Form, A learning algorithm for monomials

(9Hours)

UNIT-B

Data Preparation: Data Cleaning, Data Integration & Transformation, Data Reduction

Mining Association Rules: Associations, Maximal Frequent & Closed Frequent item sets, Covering Algorithms & Association Rules, Linear Models & Instance-Based Learning, Mining Association Rules from Transactional databases, Mining Association Rules from Relational databases & Warehouses, Correlation analysis & Constraint-based Association Mining.

(10Hours)

UNIT-C

Classification and Prediction: Issues regarding Classification & Prediction, Classification by Decision Tree induction, Bayesian classification, Classification by Back Propagation, k-Nearest Neighbour Classifiers, Genetic algorithms, Rough Set & Fuzzy Set approaches

Cluster Analysis: Types of data in Clustering Analysis, Categorization of Major Clustering methods, Hierarchical methods, Density-based methods, Grid-based methods, Model-based Clustering methods

(10Hours)

UNIT-D

Mining Complex Types of Data: Multidimensional analysis & Descriptive mining of Complex data objects, Mining Spatial Databases, Mining Multimedia Databases, Mining Time-series & Sequence data, Mining Text databases, Mining World -Wide Web

Data Mining Applications and Trends in Data Mining: Massive Datasets/Text mining, Agent-Based Mining

(10Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: System Simulation & Modelling
Course Code: CSE370

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: This Course introduces the simulation systems and their modelling applications to students. This course covers the different techniques of Simulation, General principles and related issues.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Demonstrate the simulation categorization at various levels.

CO2: Discuss the fundamental elements of discrete-event simulation including statistical models, random processes, random variants, and inputs to simulation

CO3: Analyse a real world problem and apply modelling methodologies to develop a discrete-event simulation model

CO4: Recognize the cost/benefits of computer simulation, the generation of meaningful results, decision making, and risks

CO5: Analysing the verification and validation of simulation model.

UNIT-A

Introduction to Simulation: System & System Environment, Components of a System, Discrete and Continuous Systems, Model of a System and Types of Models, Discrete Event System Simulation, Advantages and Disadvantages of Simulation, Areas of Application

Techniques of Simulation: Monte Carlo Method, Types of System Simulations, Real Time Simulation, Stochastic Variables, Discrete Probability Functions.

(10Hours)

UNIT-B

General Principles: Concepts in Discrete Event Simulation, Event Scheduling /Time Advance Algorithm, List Processing, Using Dynamic Allocation & Linked List

Simulation Software: History of Simulation Software, Selection of Simulation Software, Simulation in C++, GPSS, Simulations Packages, Trends in simulation Software

Statistical Models in Simulation: Useful Statistical Models, Discrete Distributions, Continuous Distributions, Poisson Process, Empirical Distributions. Cobweb model and distributed lag model.

(12Hours)

UNIT-C

Queuing Models: Characteristics of Queuing systems, Queuing Notation, Long Run Measures of performance of Queuing Systems, Steady State Behaviour of infinite Population Markovian Models, Steady State Behaviour of finite Population Models, Networks of Queues.

Random Number Generation: Properties of Random Numbers, Generation of Pseudo-Random Numbers, Techniques for Generating Random Numbers, Tests for Random Numbers, Inverse transform Techniques, Convolution Methods, and Acceptance –Rejection Techniques.

(12Hours)

UNIT-D

Input Modelling: Data Collection, Identifying the Distribution with Data, Parameter Estimation, Chi – Square Test, Selecting Input Models with Data. Verification & Validation of simulation Modelling: Model Building, Verification & Validation, Verification of simulation Models, Calibration & Validation of Models.

Course Title: Artificial Intelligence

Course Code: CSE372

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: The major objectives of this course is to provide students with a view of Artificial Intelligence, reasoning, knowledge representation, planning, handling uncertainty, decision making and learning techniques.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Understand the informed and uninformed problem types and apply search strategies to solve them

CO2: Apply difficult real-life problems in a state space representation so as to solve those using AI techniques like searching and game playing

CO3: Formulate valid solutions for problems involving uncertain inputs or outcomes by using decision making techniques.

CO4: Demonstrate and enrich knowledge to select and apply AI tools to synthesize information and develop models within constraints of application area.

CO5: Examine the various applications of AI, Introduction to Expert Systems & Neural Networks.

UNIT-A

Principles of Artificial Intelligence

Philosophy of artificial intelligence, Problems: Reasoning, problem solving, Knowledge representation, Planning, Learning, Natural language processing, Perception, Motion and manipulation, search techniques, constraint satisfaction, game playing, automated planning.

(10Hours)

UNIT-B

Reasoning, Planning and Knowledge Representation

Reasoning- Representation, Inference, Propositional Logic, Predicate Logic (First Order Logic), Logical Reasoning, Forward Chaining, Backward Chaining; Knowledge Representation through Predicate Logic, Rule Based Systems, Semantics Nets, Frames, Conceptual Dependency. Planning- Basic Representation of Plans, Partial Order Planning, Planning in the Blocks World, Hierarchical Planning, and Conditional Planning.

(10Hours)

UNIT-C

Handling Uncertainty and Decision Making

Handling Uncertainty: Basic Probability, Bayes Rule, Belief Networks, Default Reasoning, Fuzzy Sets and Fuzzy Logic; Decision Making- Utility Theory, Utility Functions, Decision Theoretic Expert Systems. Inductive Learning - Decision Trees, Rule Based Learning, Current-Best-Hypothesis Search, Least Commitment Search, Neural Networks, Genetic Algorithms.

(10Hours)

UNIT-D

Applications of AI

Expert Systems, Soft Computing, Introduction to Natural Language Processing, Machine Learning, Neural Networks, Reinforcement Learning, Rule Based AI. Industrial Applications of AI

DAV UNIVERSITY, JALANDHAR

Course Title: Relational Database Management System
Course Code: CSE390

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: To learn how to use a RDBMS and how to build a RDBMS.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Illustrate and comprehend the fundamental aspects of design of a database management system and to differentiate it from an RDBMS.

CO2: Write SQL queries for a given context in relational database and discussing normalization techniques with examples

CO3: Understanding of PL/SQL architecture, variables and control structures.

CO4: Describe the notions of indexes, views, triggers, cursors, constraints and transactions for Query Processing and Evaluation.

CO5: Understand the concepts of Packages and exception handling in RDBMS.

UNIT-A

Basic Introduction: Database system architecture, data independence, storage structures, data representation, indexing, relational data structure, relations, attributes, keys, embedded SQL, Relational Algebra, Query by example, relational calculus, normalization & normal forms, functional dependence, over view of security, integrity, recovery, backup, etc.

(10Hours)

UNIT-B

Introduction to PL/SQL concepts: PL/SQL architecture, Declares Variables, Control Structures, Iteration Control, Introduction to SQL Server and Oracle Server, Introduction to Subprograms (Functions and Procedures), Functions vs. Procedures.

(9Hours)

UNIT-C

PL/SQL Constructs: Indexes, Views and its types, Understanding Cursors and its types, Introduction to triggers along with Before/ After/Delete/ Update/Row-Level Triggers, Storage strategies (Indices, B-trees, hashing).

(10Hours)

UNIT-D

Packages and Exception Handling: Packages Specification, Package body and Overloading Package, Exceptions, Errors, User – Defined Exceptions.

(10Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Relational Database Management System Laboratory
Course Code: CSE392

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objectives:

CO1: Implement Basic DDL, DML and DCL commands

CO2: Understand Data selection and operators used in queries and restrict data retrieval and control the display order

CO3: Write sub queries and understand their purpose

CO4: Use Aggregate and group functions to summarize data

CO5: Join multiple tables using different types of joins

CO6: Understand the PL/SQL architecture and write PL/SQL code for procedures, triggers, cursors, exception handling etc.

List of Experiments

1. Introduction to TCL and DCL Commands in oracle.
2. Implementation of nested and join queries.
3. To execute and verify the SQL commands for views.
4. To write a PL/SQL block using different control (if, if else, for loop, while loop,) statements.
5. To write a PL/SQL procedure block and its types.
6. To write a procedure for Cursor implementation in PL/SQL.
7. To implement Implicit and Explicit Cursors in Oracle.
8. Implementation of Functions, Packages and Triggers in Oracle.

This is only the suggested list of programs. Instructor may frame additional Practicals relevant to the course contents

DAV UNIVERSITY, JALANDHAR

Course Title: Data Mining Laboratory
Course Code: CSE324A

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Objective:

1. Practical exposure on implementation of well-known data mining tasks.
2. Exposure to real life data sets for analysis and prediction.
3. Learning performance evaluation of data mining algorithms in a supervised and an unsupervised setting.
4. Handling a small data mining project for a given practical domain.

Course Outcomes:

C01: The data mining process and important issues around data cleaning, pre-processing and integration.

C02: The principle algorithms and techniques used in data mining, such as clustering, association mining, classification and prediction.

**Students are required to perform practical in Oracle/MS SQL Server and STATISTICA Data Miner

List of Experiments

1. Building a Database Design using ER Modelling and Normalization Techniques
2. Implementation of functions, Procedures, Triggers and Cursors
3. Load Data from heterogeneous sources including text files into a predefined warehouse schema.
4. Feature Selection and Variable Filtering (for very large data sets)
5. Association mining in large data sets
6. Interactive Drill-Down, Roll up, Slice and Dice operations
7. Generalized EM & k-Means Cluster Analysis
8. General Classification

DAV UNIVERSITY, JALANDHAR

Course Title: Programming with PYTHON
Course Code: CSE443

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objectives: To impart knowledge of PYTHON programming methodologies and their significance.

Course outcomes: - This course offers a good understanding of the concepts, methods and techniques of PYTHON.

CO1: Interpret the fundamental Python syntax and semantics and be fluent in the use of Python control flow statements.

CO2: Express proficiency in the handling of strings, functions and files.

CO3: Determine the methods to create and manipulate Python programs by utilizing object oriented programming concepts and python regular expressions.

CO4: Implementing concepts like exception handling, multithreading and database interaction.

UNIT-A

Introduction to Python Installation and Working with Python, Understanding Python variables, Python basic Operators, Understanding python blocks

Python Data Types Declaring and using Numeric data types: int, float, complex, using string data type and string operations, Defining list and list slicing, Use of Tuple data type

Python Program Flow Control Conditional blocks using if, else and elif, simple for loops in python, for loop using ranges, string, list and dictionaries Use of while loops in python, Loop manipulation using pass, continue, break and else Programming using Python conditional and loops block

(11Hours)

UNIT-B

Python Functions, Modules and Packages Organizing python codes using functions, organizing python projects into modules, importing own module as well as external modules, Understanding Packages, Powerful Lambda function in python Programming using functions, modules and external packages

Python String, List and Dictionary Manipulations Building blocks of python programs, understanding string in build methods, List manipulation using in build methods, Dictionary manipulation, Programming using string, list and dictionary in build functions

Python File Operation Reading config files in python, Writing log files in python, Understanding read functions, read(), readline() and readlines(), Understanding write functions, write() and writelines(), Manipulating file pointer using seek, Programming using file operations

(11Hours)

UNIT-C

Python Object Oriented Programming – Oops Concept of class, object and instances Constructor, class attributes and destructors, Real time use of class in live projects, Inheritance, overlapping and overloading operators, Adding and retrieving dynamic attributes of classes, Programming using Oops support

Python Regular Expression Powerful pattern matching and searching Power of pattern searching using regex in python, Real time parsing of networking or system data using regex, Password, email, URL validation using regular expression, Pattern finding programs using regular expression

(11Hours)

UNIT-D

Python Exception Handling Avoiding code break using exception handling, safe guarding file operation using exception handling, Handling and helping developer with error code, Programming using Exception handling

Python Database Interaction SQL Database connection using python, creating and searching tables, Reading and storing config information on database, Programming using database connections

Python Multithreading Understanding threads, forking threads, synchronizing the threads Programming using multithreading

(10Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: COMPILER DESIGN
Course Code: CSE403

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 1 | 0 | 4 |

Course Objective: This course should provide the students with a fairly good concept of fundamental concepts and compiler design issues of programming languages and become familiar with major programming paradigms.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Understand the basics of compiler and identify the relationship among different phases of compiler.

CO2: Understand the application of finite state machines, recursive descent, production rules, parsing and language semantics.

CO3: Parser construction using different parsing techniques.

CO4: Language identification and grammar writing.

CO5: Applying Intermediate code generation techniques to provide platform independence.

CO6: Apply Code Generation and Optimization techniques to generate optimized Assembly code.

UNIT-A

Introduction and Lexical Analysis

Introduction to Compilers, Analysis of the source program, the phases of a compiler, grouping of phases, The role of the lexical analyzer, Specification of tokens, Recognition of tokens, A language for specifying lexical analyzer, Scanning Process, Regular Expressions, Finite Automaton (NFA and DFA), LEX.

(11Hours)

UNIT-B

Syntax analysis: CFG's, Ambiguity, top down parsing, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence grammars, LR parsers (SLR, LALR, LR), YACC.

Syntax directed definitions: Inherited and Synthesized Attributes, Dependency Graph, Bottom up & Top down evaluation of attributes, L- and S-attributed definitions.

(12Hours)

UNIT-C

Type Checking -Type Systems, Specification of a simple type checker.

Run time system: Storage organization, activation tree, activation record, parameter passing, symbol table, dynamic storage allocation.

(11Hours)

UNIT-D

Intermediate Code Generation: Intermediate representations, translation of declarations, assignments, control flow, Boolean expressions and procedure calls.

Code Generation and Optimization: issues, basic blocks and flow graphs, register allocation, code generation, DAG representation of programs, and code generation from DAG, Peep-hole optimization, and code generator generators.

- CASE Study of Gcc Compiler

(12Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Information Security
Course Code: CSE405A

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: The aim of this course is to provide attendees with a thorough understanding of the issues associated with the design, provision and management of security services for modern communication and information systems. Students will learn the different aspects of information and network security and you will be able to speak about a multitude of security attacks and the defensive strategies used to combat them.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Describe the fundamental concepts of information system security.

CO2: Analyse block cipher encryption algorithm

CO3: Understand the concept of advance encryption algorithm, public key cryptography and key management

CO4: Describe authentication protocols, Hashing functions and hash algorithm

CO5: Understand the following terms: Authentication applications, IP security policy, host based security, firewall, and packet filtering and intrusion detection

UNIT-A

Overview: Services, Mechanisms, and Attacks, the OSI Security Architecture, a Model for Network Security.

Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography.

Block Ciphers and The Data Encryption Standard: Simplified DES, Block Cipher Principles, The Data Encryption Standard, The Strength of DES, Differential and Linear Cryptanalysis, Block Cipher Design Principles, Block Cipher Modes of Operation.

Introduction To Finite Fields: Groups, Rings, and Fields, Modular Arithmetic, Euclid's Algorithm, Finite Fields of the Form $GF(p)$, Polynomial Arithmetic, Finite Fields of the Form $GF(2^n)$.

(10Hours)

UNIT-B

Advanced Encryption Standard: Evaluation Criteria for AES, The AES Cipher.

Contemporary Symmetric Ciphers: Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher.

Public-Key Encryption: Introduction to Number Theory: Prime Numbers, Fermat's and Euler's Theorems, Testing for primality, the Chinese Remainder Theorem, and Discrete Logarithms.

Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems, the RSA Algorithm.

Key Management and Other Public-Key Crypto systems: Key Management, Diffie-Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography.

(10Hours)

UNIT-C

Message Authentication and Hash Functions: Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions and MACs.

Hash Algorithms: MD5 Message Digest Algorithm, Secure Hash Algorithm and HMAC.

Digital Signatures and Authentication Protocols: Digital Signatures, Authentication Protocols, Digital Signature Standard.

(10Hours)

UNIT-D

Network Security Practice: Authentication Applications: Kerberos, X.509 Authentication Service, Electronic Mail Security: Pretty Good Privacy, S/MIME.

IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management,

Web Security: Web Security Considerations, Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction.

DAV UNIVERSITY, JALANDHAR

System Security: Intruders: Intruders, Intrusion Detection, Password Management, Malicious Software: Viruses and Related Threats, Virus Countermeasures, Firewalls: Firewall Design Principles, Trusted Systems.

DAV UNIVERSITY, JALANDHAR

Course Title: Information Security Laboratory
Course Code: CSE435

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Outcomes:

CO1: To implement Symmetric and Asymmetric cipher techniques.

CO2: Demonstrate the concept of random numbers generation

CO3: To implement various network security algorithms to cipher and decipher the text.

CO4: Implement of system security methods

List of Experiments

Implementation of the followings in any High Level Programming Language:

1. Implementation of symmetric techniques (Ceaser cipher, monoalphabetic, polyalphabetic, hill-Cipher, vigenere cipher)
2. Implementation of transposition techniques (Rail-fence, transposition of columns)
3. Implantation of Block Cipher techniques (Play fair cipher, Data Encryption Standard)
4. Implementation of algorithm used for Random Number Generation (Blum blum shub)
5. Implementation of algorithm used for calculating GCD (Euclidean algorithm).
6. Implementation of algorithm used for calculating multiplicative inverse (Extended-Euclidean)
7. Implementation of algorithm used for testing for Primarily (Chinese Remainder Theorem)
8. Implementation of RSA Algorithm.
9. Elliptic Curve Cryptography.
10. HashAlgorithms:MD5 Message Digest Algorithm, Authentication Protocols.
11. System Security: Firewalls: Firewall Design Principles

DAV UNIVERSITY, JALANDHAR

Course Title: Programming with PYTHON Lab
Course Code: CSE445

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 4 | 2 |

Course Objectives:

- C01: To write, test, and debug simple Python programs.
- C02: To implement Python programs with conditionals and loops.
- C03: Use functions for structuring Python programs.
- C04: Read and write data from/to files in Python.

LIST OF PROGRAMS:

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton's method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Programs that take command line arguments (word count)
11. Find the most frequent words in a text read from a file
12. Simulate elliptical orbits in Pygame
13. Simulate bouncing ball using Pygame

DAV UNIVERSITY, JALANDHAR

Course Title: Project
Course Code: CSE450

| L | T | P | Credits |
|----------|----------|----------|----------------|
| 0 | 0 | 8 | 4 |

Project should include following phases:

- System Analysis and Design
 - Coding - Implementation
 - Testing
- a.** It should be a working project
 - b.** Must have a future perspective
 - c.** The Domain of project can be from:
 - **Databases**
 - **Application software**
 - **System software**
 - **Multimedia**
 - **Web Applications, etc.**
 - d.** A complete project report must be submitted along with softcopy of project. Project report may include Requirements of Project, Flow Chart, DFD's, Coding and Test Results.

DAV UNIVERSITY, JALANDHAR

Course Title: Internet of Things (IoT)
Course Code: CSE454

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective:

1. Vision and Introduction to IoT.
2. Data and Knowledge Management and use of Devices in IoT Technology.
3. Understand State of the Art – IoT Architecture.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Understand the fundamentals of internet of things

CO2: Get familiar with network routing and sensor deployment aspects along with challenges

CO3: Recognize the domain specific applications IoT

CO4: Analyze various Physical Computing Techniques.

CO5: Design an IoT application with Sensors and Actuators using python

UNIT-A

Introduction to IoT

Defining IoT, Characteristics of IoT, Physical design of IoT, Logical design of IoT, Functional blocks of IoT, Communication models & APIs **IoT & M2M**, Machine to Machine, Difference between IoT and M2M, Software define Network

(11Hours)

UNIT-B

Network & Communication aspects

Wireless medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment & Node discovery, Data aggregation & dissemination.

Challenges in IoT

Design challenges, Development challenges, Security challenges, other challenges

(11Hours)

UNIT-C

Domain specific applications of IoT

Home automation, Industry applications, Surveillance applications, Other IoT applications

IoT Physical Devices & Endpoints:

What is an IoT Device, Exemplary Device, Board, and Linux on Raspberry Pi, Interfaces, and Programming & Devices?

(12Hours)

UNIT-D

Developing IoT Applications

Introduction to Python and its packages for developing applications through IoT tools, developing one sensor based application through embedded system platform using python.

(11Hours)

REFERENCES:

1. Vijay Madiseti, ArshdeepBahga, "Internet of Things: A Hands On Approach."

DAV UNIVERSITY, JALANDHAR

Course Title: Professional Communication
Course Code: ENG352

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: This paper, with a practice-oriented approach, aims to hone students' skills in the major dimensions of professional communication.

Course Outcome: Students will show adequate understanding of professional communication skills.

CO1: Students will understand various forms of communication as well as barriers to effective communication.

CO2: The students will have a broad vocabulary and will be able to articulate concepts accurately and more effectively to others.

CO3: Students will have enough knowledge and practice of formal conversations, discussions and presentations.

CO4: The students will be able to effectively write cover letters and CVs and will have practised their interview skills.

Unit-1

- Professional Communication: Technical Communication and Business Communication
- Verbal and Non-Verbal Communication
- Barriers to Communication

(N.B. As the topics are largely theoretical, teacher shall introduce the topics in classroom in the form of lectures and encourage students to read on their own from the reference books. All these topics will be supported by examples from real life situations.)

Unit-2

- Reading Skills: Active & Passive Reading, Reading strategies, and Developing a Good Reading Speed
- Listening Skills: Types of Listening & Effective Listening Strategies
- Speaking Skills: Basics in Phonetics
- Writing Skills: Topic Sentence and Paragraph (descriptive, narrative, expository, and persuasive)

(N.B. Teacher will encourage students to apply the theoretical knowledge while practicing the four skills. Opportunities to practice the language skills should be created for students in the classroom.)

Unit-3

- Conversation: Formal and Informal
- Panel Discussion and Group Discussion
- Oral Presentation

(N.B. Teacher will give supporting examples from the industry and encourage students to do relevant exercises.)

Unit-4

- C.V. and Cover Letter
- Interview Skills
- Professional Letters
- Report Writing and Memo

(N.B. Teacher will give supporting examples from the industry and encourage students to do relevant exercises.)

DAV UNIVERSITY, JALANDHAR

Testing: The examinations will be conducted as per the norm of the university.

DAV UNIVERSITY, JALANDHAR

Course Title: Introduction to Java Programming
Course Code: CSE342

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: The course is an introduction to Computer Science that exposes students to the concept of computing and programming using JAVA. This course is for those with little or no programming experience. The exercises are designed to help the students get a solid grasp of declaring and using methods and also learn the fundamental concepts of object oriented programming. Students will learn to use Java technologies in the real world and write numerous programs throughout the semester to demonstrate mastery of the concepts discussed in the classroom.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1. Use the syntax and semantics of java programming language and basic concepts of OOP.

CO2. Develop reusable programs using the concepts of inheritance, polymorphism, interfaces and packages

CO3. Apply the concepts of Multithreading and Exception handling to develop efficient and error free codes

CO4. Writing complex programs using the Java standard API library

CO5. Design event driven GUI applications of the real word scenarios and understand basics of network programming.

UNIT-A

Overview of Basic OO Concepts

Need for object-oriented paradigm: Architecture, Agents, responsibility, messages, methods, classes and instances, class hierarchies (Inheritance), method binding, data types, variables, scope and life time of variables, arrays, operators, expressions, control statements, user input through command line arguments and Scanner class, type conversion and casting.

Features of OOP language

Classes and objects, constructors, methods, access control, Overloading methods and constructors, parameter passing, recursion, this keyword, garbage collection, inheritance, super keyword, polymorphism- method overriding, final keyword, abstract methods and classes.

(10Hours)

UNIT-B

String Handling

The string constructors, string length, special string operations, character extraction, string comparison, searching string, modifying string, data conversion, changing the case of characters, string buffer.

Interfaces:

Differences between classes and interfaces, defining an interface, implementing interface, applying interfaces, variables in interface and extending interface.

Packages:

Defining, Creating and Accessing a Package, Understanding CLASSPATH, importing packages, exploring packages – Java.io, Java.util.

Exception handling:

Concepts of exception handling, benefits of exception handling, Termination models, exception hierarchy, usage of try, catch, throw, throws and finally, built in exceptions, creating own exception sub classes.

(10Hours)

UNIT-C

Multithreading

Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, daemon threads, thread groups.

I/O and Applets

I/O Basics, Reading Console Input, Writing Console Output, Reading and Writing Files, Applet Fundamentals, Applet Architecture, The HTML Applet tag, passing parameters to Applets.

User interface components using AWT and Swings

DAV UNIVERSITY, JALANDHAR

Labels, buttons, canvas, scrollbars, text components, check box, check box groups, choices, lists panels – scroll pane, dialogs, menu bar, graphics, layout manager and its types – border, grid, flow, card and grid bag.

(10Hours)

UNIT-D

Event Handling and Collection Framework

Event, components of event, Event Classes, Listener Interfaces, Adapter Classes and Inner Classes. Lists, Vectors, Sets and Maps. Overview of MVC architecture.

Networking

Basics of network programming, addresses, ports, sockets, simple client server program, multiple clients, and Java .net package Packages – java.util, Database connectivity.

DAV UNIVERSITY, JALANDHAR

Course Title: C# Programming
Course Code: CSE344

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objectives: This course offers a good understanding of Visual Programming concepts and prepares students to be in a position to write GUI applications.

Course Outcomes: At the end of the course students will have thorough knowledge of:

CO1: Read, write, execute, and debug C# applications, understand variables and data types

CO2: Code decision and control structures (if, if/else, switch, while, do/while, for) and use primitive data types

CO3: Write user-defined method, arrays, programs using object-oriented programming techniques including classes, objects, inheritance, and polymorphism

CO4: Working with I/O and object serialization

UNIT-A

Introduction to .NET Environment- .Net Architecture, The Relationship of C# To .Net , The Common Language Runtime, Advantages of Managed Code, Use of Attributes, Deployment. The Common Language Runtime, Framework Base Classes, User and Programs Interface, Visual Studio .NET, .NET Languages, Benefits of The .NET Approach

(10Hours)

UNIT-B

C# Fundamentals- C# Basics, Variables, Predefined Data Types: Value Types and Reference Types, CTS Types, Namespaces, Using Statement, The main () Method, Multiple Main Methods, Passing Arguments toMain (). More on Compiling C# Files, C# Programming Guidelines, C# Pre-processor Directives.

Operator Shortcuts, The Ternary Operator, The Checked and unchecked Operators, The Is Operator, The as Operator, The Sizeof Operator, The Type of Operator, Nullable Types and Operators, The Null Coalescing Operator, Operator Precedence. Type Safety, Type Conversions, Console I/O, Using Comments. Conditional Statements, Loops, Jump Statements Boxing and Unboxing.

Difference between C++ and C#, Difference between Java and C#

(10Hours)

UNIT-C

Object oriented aspects of C#- Classes, Objects, Partial Classes, Static Classes, and Object Class Inheritance: Types of Inheritance, Method Overloading, Virtual Methods, Hiding Methods, and Calling Base Versions of Functions. Sealed Classes and Methods, Constructors of Derived Classes, Modifiers, Interfaces, Derived Interfaces. Operator Overloading, Delegates, Events, Errors and Exceptions

(10Hours)

UNIT-D

I/O and Object serialization- I/O: System. I/O, Streams, Text Writer, Text Reader Writing Windows Forms Applications: Understanding Windows Forms, Window Form Controls, Menus, MDI Forms Using Inheritance in Windows Forms, Using Common Dialog Controls, Deploying Windows Forms Applications

(9Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Network Programming
Course Code: CSE346

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: The course is an introduction to Computer Science that exposes students to the concept of Network Programming. It will focus on the concepts of Socket Programming.

Course Outcomes: Upon successful completion of this course, students should be able to

CO1: Write socket address and structures and also can perform IPv4 and IPv6 interoperability.

CO2: Application development using TCP echo server

CO3: Demonstrate advanced knowledge of programming for network communications, have a detailed knowledge of the TCP/UDP Sockets

CO4: learn advanced programming techniques such as IPv6 Socket Programming, Broadcasting, Multicasting

UNIT-A

Introduction: Overview of UNIX OS – Environment of a UNIX process – Process control – Process relationships Signals – Interprocess Communication – overview of TCP/IP protocols

Introduction to Socket Programming: Introduction to Sockets – Socket address Structures – Byte ordering functions – address conversion functions – Elementary TCP Sockets – socket, connect, bind, listen, accept, read, write , close functions – Iterative Server – Concurrent Server.

(10Hours)

UNIT-B

Application development TCP Echo Server: TCP Echo Client – Posix Signal handling – Server with multiple clients – boundary conditions: Server process Crashes, Server host Crashes, Server Crashes and reboots, Server Shutdown – I/O multiplexing – I/O Models – select function shutdown function – TCP echo Server (with multiplexing) – poll function – TCP echo Client (with Multiplexing)

(10Hours)

UNIT-C

Sockets: Socket options, elementary UDP sockets: Socket options – getsockopt and setsockopt functions – generic socket options – IP socket options, ICMP socket options – TCP socket options Elementary UDP sockets – UDP echo Server – UDP echo Client – Multiplexing TCP and UDP sockets – Domain name system, get host by name function – Ipv6 support in DNS gethostbyadr function getservbyname&getservbyport

(10Hours)

UNIT-D

Advanced sockets: IPv4 and IPv6 interoperability – threaded servers – thread creation and termination –TCP echo server using threads – Mutexes – condition variables – raw sockets – rawsocket creation – raw socket output – raw socket input – ping program – trace route program.

(9Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: C SHELL PROGRAMMING
Course Code: CSE318

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 1 | 0 | 3 |

Course Objective: To understand the basic concepts of shell programming.

Course Outcomes: On completion of this course, students will be able to:

CO1: Understand the basic concepts of UNIX Architecture and basic Commands.

CO2: Understand different types of Filters, grep and sed, interactive korne shells.

CO3: Understand the commands related to Shell basics, korne shell programming.

CO4: Understand the concepts of advance file concepts, commands related to Shell script

UNIT- A

Introduction to UNIX: Architecture of Unix, Features of Unix , Unix Commands – PATH, man, echo, printf, script, passwd, uname, who, date, stty, pwd, cd, mkdir, rmdir, ls, cp, mv, rm, cat, more, wc, lp, od, tar, gzip.

UNIX Utilities: Introduction to unix file system, vi editor, file handling utilities, security by file permissions, process utilities, disk utilities, networking commands, unlink, du, df, mount, unmount, find, unmask, ulimit, ps, w, finger, arp, ftp, telnet, rlogin. Text processing utilities and backup utilities , detailed commands to be covered are tail, head , sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, Cpio

Introduction to Shells: UNIX Session, Standard Streams, Redirection, Pipes, Tee Command, Command Execution, Command-Line Editing, Quotes, Command Substitution, Job Control, Aliases, Variables, Predefined Variables, Options, Shell/Environment Customization.

(10Hours)

UNIT- B

Filters: Filters and Pipes, Concatenating files, Display Beginning and End of files, Cut and Paste, Sorting, Translating Characters, Files with Duplicate Lines, Count characters, Words or Lines, Comparing Files.

Grep: Operation, grep Family, Searching for File Content.

Sed: Scripts, Operation, Addresses, commands, Applications, grep and sed.

awk: Execution, Fields and Records, Scripts, Operations, Patterns, Actions, Associative Arrays, String Functions, String Functions, Mathematical Functions, User – Defined Functions, Using System commands in awk,

Applications, awk and grep, sed and awk.

Interactive Korn Shell: Korn Shell Features, Two Special Files, Variables, Output, Input, Exit Status of a Command, eval Command, Environmental Variables, Options, Startup Scripts, Command History, Command Execution Process.

(10Hours)

UNIT- C

Korn Shell Programming: Basic Script concepts, Expressions, Decisions: Making Selections, Repetition, special Parameters and Variables, changing Positional Parameters, Argument Validation, Debugging Scripts, Script Examples.

Interactive C Shell: C shell features, Two Special Files, Variables, Output, Input, Exit Status of a Command, eval Command, Environmental Variables, On-Off Variables, Startup and Shutdown Scripts, Command History, Command Execution Scripts.

(10Hours)

UNIT- D

C Shell Programming: Basic Script concepts, Expressions, Decisions: Making Selections, Repetition, special Parameters and Variables, changing Positional Parameters, Argument Validation, Debugging Scripts, Script Examples.

File Management: File Structures, System Calls for File Management– create, open, close, read, write, lseek, link, symlink, unlink, stat, fstat, lstat, chmod, chown, Directory API – opendir, readdir, closedir, mkdir, rmdir, umask

DAV UNIVERSITY, JALANDHAR

Course Title: Introduction to Java Programming Laboratory
Course Code: CSE362

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Objective:

To make the student learn the application of advanced object oriented concepts for solving problems.

To teach the student to write programs using advanced Java features to solve the problems

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1. Use the syntax and semantics of java programming language and basic concepts of OOP.

CO2. Develop reusable programs using the concepts of inheritance, polymorphism, interfaces and packages

CO3. Apply the concepts of Multithreading and Exception handling to develop efficient and error free codes

CO4. Writing complex programs using the Java standard API library

CO5. Design event driven GUI applications of the real word scenarios and understand basics of network programming.

List of Experiments

1. Write a simple java program to generate Fibonacci series.
2. Write a Java program that prompts the user for an integer and then prints out all prime numbers up to that integer.
3. Write a Java program that checks whether a given string is a palindrome or not.
4. Write a Java program for sorting a given list of names in ascending order.
5. Write a simple program to implement the concept of classes, inheritance, packages and interfaces.
6. Write a java program to implement the concept of super, this keyword, method overloading and overriding and dynamic method dispatch.
7. Write a program to implement the concept of exception handling using try, catch, and throw, throws.
8. Write a simple program to create your own exception subclass.
9. Develop an applet that receives an integer in one text field, and computes its factorial Value and returns it in another text field, when the button named "Compute" is clicked.
10. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result.
11. Write a Java program for handling mouse events.
12. Write a Java program that creates three threads. First thread displays "Good Morning" every one second, the second thread displays "Hello" every two seconds and the third thread displays "Welcome" every three seconds.
13. Write a Java program to implement the concept of multithreading using Runnable interface and extending thread class.
14. Write a simple program to implement the concept of socket programming in java.
15. Write a simple program to connect the Database using JDBC.

This is only the suggested list of practical. Instructor may frame additional practical relevant to the course contents.

DAV UNIVERSITY, JALANDHAR

Course Title: C# Programming Laboratory
Course Code: CSE364

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Outcomes:

CO1: Understand code solutions and compile C# projects within the .NET framework.

CO2: Construct classes, methods, and assessors, and instantiate objects.

CO3: Understand and implement string manipulation, events and exception handling within .NET application environment.

CO4: Identify and resolve problems (debug /trouble shoot) in C#.NET window based application

CO5: Identify Industry defined problem and suggesting solution(s) using .NET application.

List of Experiments

1. Writing basic C# programs demonstrating the concepts of functions, arrays, classes, inheritance, polymorphism, namespaces, etc.
2. Writing graphical programs demonstrating the concepts of event handling, Labels, Textboxes, Buttons, Group Boxes, Panels, Checkboxes and Radio Buttons, Picture Boxes, ToolTips.
3. Writing MDI Applications and demonstration of controls like: Month Calendar, DateTimePicker, Link Label, List Box, CheckedListBox, Combo Box, Tree View, List View, and Tab Control.
4. Programs using Structures and Enumerations
5. Program to implement Delegates and Events
6. Program to implement Exception Handling

DAV UNIVERSITY, JALANDHAR

Course Title: Network Programming Laboratory
Course Code: CSE366

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Outcomes:

CO1: To implement various forms of IPC through UNIX and socket Programming

CO2: Hands on experience with C language.

CO3: Hands on experience with Unix System Calls.

CO4: Hands on experience with TCP/UDP photocells

1. Implement the following forms of IPC.
 - a. Pipes
 - b. FIFO
2. Implement file transfer using Message Queue form of IPC
3. Write a programme to create an integer variable using shared memory concept and increment the variable simultaneously by two processes. Use semaphores to avoid race conditions
4. Design TCP iterative Client and server application to reverse the given input sentence
5. Design TCP iterative Client and server application to reverse the given input sentence.
6. Design TCP client and server application to transfer file
7. Design a TCP concurrent server to convert a given text into upper case using multiplexing system call "select"
8. Design a TCP concurrent server to echo given set of sentences using poll functions
9. Design UDP Client and server application to reverse the given input sentence
10. Design UDP Client server to transfer a file
11. Design using poll client server application to multiplex TCP and UDP requests for converting a given text into upper case.
12. Design a RPC application to add and subtract a given pair of integers

DAV UNIVERSITY, JALANDHAR

Course Title: C SHELL PROGRAMMING Laboratory
Course Code: CSE330

| L | T | P | Credits |
|---|---|---|---------|
| 0 | 0 | 2 | 1 |

Course Outcomes: This Course will enable students to:
CO1: Describe the architecture of Unix Operating System.
CO2: Demonstrate and analyses the UNIX commands usage.
CO3: Illustrate the power of UNIX shell by writing shell scripts.
CO4: Explain and analyses the process concepts in Unix OS.
CO5: Illustrate the power of Report generation using sed and awk.

Instruction for Students: The students will be attending a laboratory session of 2 hours weekly and they have to perform the practical related to the following list.

1. a) Login to the system
b) Use the appropriate command to determine your login shell
c) Use the /etc./password file to verify the result of step b.
d) Use the who command and redirect the result to a file called myfile1. Use the more command to see the contents of myfile1.
e) Use the date and who commands in sequence (in one line) such that the output of date will display on the screen and the output of who will be redirected to a file called myfile2. Use the more command to check the contents of myfile2.
2. a) Write a sed command that deletes the first character in each line in a file.
b) Write a sed command that deletes the character before the last character in each line in a file.
c) Write a sed command that swaps the first and second words in each line in a file.
3. a) Pipe your /etc/passwd file to awk, and print out the home directory of each user.
b) Develop an interactive grep script that asks for a word and a file name and then tells how many lines contain that word.
c) Repeat
d) Part using awk
4. a) Write a shell script that takes a command -line argument and reports on whether it is directory, a file, or something else.
b) Write a shell script that accepts one or more file name as arguments and converts all of them to uppercase, provided they exist in the current directory.
c) Write a shell script that determines the period for which a specified user is working on the system.
5. a) Write a shell script that accepts a file name starting and ending line numbers as arguments and displays all the lines between the given line numbers.
b) Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it.
6. a) Write a shell script that computes the gross salary of an employee according to the following rules:
 - i) If basic salary is < 1500 then HRA =10% of the basic and DA =90% of the basic.
 - ii) If basic salary is >=1500 then HRA =Rs500 and DA=98% of the basic. The basic salary is entered interactively through the key board.
b) Write a shell script that accepts two integers as its arguments and computers the value of first number raised to the power of the second number.

DAV UNIVERSITY, JALANDHAR

7. a) Write an interactive file-handling shell program. Let it offer the user the choice of copying, removing, renaming, or linking files. Once the user has made a choice, have the program ask the user for the necessary information, such as the file name, new name and so on.
b) Write shell script that takes a login name as command – line argument and reports when that person logs in
c) Write a shell script which receives two file names as arguments. It should check whether the two file contents are same or not. If they are same then second file should be deleted.
8. a) Write a shell script that displays a list of all the files in the current directory to which the user has read, write and execute permissions.
b) Develop an interactive script that ask for a word and a file name and then tells how many times that word occurred in the file.
c) Write a shell script to perform the following string operations:
i) To extract a sub-string from a given string.
ii) To find the length of a given string.
9. Write a C program that takes one or more file or directory names as command line input and reports the following information on the file:
i) File type
ii) Number of links
iii) Read, write and execute permissions
iv) Time of last access
(Note: Use stat/fstat system calls)
10. Write C programs that simulate the following unix commands:
a) mv
b) cp (Use system calls)
11. Write a C program that simulates ls Command (Use system calls / directory API)

**DISCIPLINE SPECIFIC
ELECTIVE-II**

DAV UNIVERSITY, JALANDHAR

Course Title: Expert System
Course Code: CSE451

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Outcomes: After completing this course, the student should be able to:
CO1: Apply the methodology to transfer human knowledge into an expert system
CO2: Apply knowledge representation
CO3: Design a knowledge base
CO4: Implement a rule-based expert system
CO5: Evaluate Expert System tools

UNIT-A

Introduction: Expert Systems, Definitions types, components, Expert System Development Process Knowledge Representation Techniques-Logic Frames, Semantic Nets.

(10Hours)

UNIT-B

Basic concepts: Domain Exploration, Knowledge elicitation, Conceptualization, Gathering, Formalizations, Methods of Knowledge Acquisition; Interviewing Sensor Data Capturing. Knowledge base and Inference engine model.

(10Hours)

UNIT-C

Learning: Learning, Planning and Explanation in Expert System: Neural Expert System, Fuzzy Expert System, Real Time Expert Systems.

(10Hours)

UNIT-D

Implementation Tools and Case Studies -Implementation Tools : Prolog, LISP, Expert System Shell Expert System, Study of existing expert systems- TIERES, As MYCIN & AM.

(9Hours)

REFERENCES:

1. Patterson, Introduction to AI Expert System, PHI, 1993

DAV UNIVERSITY, JALANDHAR

Course Title: Real Time System
Course Code: CSE453

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Outcomes: On completion of the course, the student should be able to:

CO1: Explain fundamental principles for programming of real time systems with time and resource limitations.

CO2: Describe the foundation for programming languages developed for real time programming.

CO3: Account for how real time operating systems are designed and functions.

CO4: Describe what a real time network is.

CO5: Use real time system programming languages and real time operating systems for real time applications.

CO6: Analyse real time systems with regard to keeping time and resource restrictions.

UNIT-A

Introduction – Issues in Real Time Computing, Structure of a Real Time System, Task Classes, Performance Measures for Real Time Systems, Estimating Program Run Times.

Task Assignment and Scheduling – Classical Uniprocessor scheduling algorithms, Uniprocessor scheduling of IRIS tasks, Task assignment, Mode changes, and Fault Tolerant Scheduling.

(10Hours)

UNIT-B

Programming Languages and Tools – Desired language characteristics, Data typing, Control structures, Facilitating Hierarchical Decomposition, Packages, Run – time (Exception) Error handling, Overloading and Generics, Multitasking, Low level programming, Task Scheduling, Timing Specifications, Programming Environments, Run – time support.

(10Hours)

UNIT-C

Real time Databases – Basic Definition, Real time Vs General Purpose Databases, Main Memory Databases, Transaction priorities, Transaction Aborts, Concurrency control issues, Disk Scheduling Algorithms, Two – phase Approach to improve Predictability, Maintaining Serialization Consistency, and Databases for Hard Real Time Systems.

(10Hours)

UNIT-D

Real – Time Communication – Communications media, Network Topologies Protocols, Fault Tolerant Routing. Fault Tolerance Techniques – Fault Types, Fault Detection. Fault Error containment Redundancy, Data Diversity, Reversal Checks, Integrated Failure handling. **Reliability Evaluation Techniques** – Obtaining parameter values, Reliability models For Hardware Redundancy, Software error models. Clock Synchronization – Clock, A Non-fault Tolerant Synchronization Algorithm, and Impact of faults, Fault Tolerant Synchronization in Hardware, and Fault Tolerant Synchronization in software.

DAV UNIVERSITY, JALANDHAR

Course Title: Distributed System Concepts
Course Code: CSE455

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: This course is an introduction to the design of distributed systems and algorithms that support distributed computing. It aims to provide a practical exposure into the design and functioning of existing distributed systems

Course Outcomes: At the end of the course the students will be able to

C01: Understand the design principles in distributed systems and the architectures for distributed systems.

C02: Apply various distributed algorithms related to clock synchronization, concurrency control, deadlock detection, load balancing, voting etc.

C03: Analyze fault tolerance and recovery in distributed systems and algorithms for the same.

C04: Analyze the design and functioning of existing distributed systems and file systems.

C05: Implement different distributed algorithms over current distributed platforms

UNIT-A

Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges.

System Models: Architectural models, Fundamental Models Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport's & vectors logical clocks, Causal ordering of messages, global state, and termination detection.

(10Hours)

UNIT-B

Distributed Mutual Exclusion: Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and non-token based algorithms.

Distributed Deadlock Detection: System model, resource vs communication deadlocks, deadlock prevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms.

Agreement Protocols: Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem, Interactive consistency Problem, Solution to Byzantine Agreement problem, Application of Agreement problem, Atomic Commit in Distributed Database system.

(10Hours)

UNIT-C

Distributed Objects and Remote Invocation: Communication between distributed objects, Remote procedure call, Events and notifications, Java RMI case study.

(9Hours)

UNIT-D

Distributed Transactions: Flat and nested distributed transactions, Atomic Commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery.

Replication: System model and group communication, Fault -tolerant services, Transactions with replicated data.

CORBA Case Study: CORBA RMI, CORBA services.

DAV UNIVERSITY, JALANDHAR

Course Title: Information System
Course Code: CSE457

| L | T | P | Credits |
|---|---|---|---------|
| 3 | 0 | 0 | 3 |

Course Objective: This course should provide understanding the planning of Information Systems.

Course Outcomes: After the completion of this course the participants would gain the knowledge of the various views of management and knowledge information systems.

CO1: Relate the basic concepts and technologies used in the field of management information systems.

CO2: Compare the processes of developing and implementing information systems.

CO3: Outline the role of the ethical, social, and security issues of information systems.

CO4: Translate the role of information systems in organizations, the strategic management processes, with the implications for the management.

CO5: Apply the understanding of how various information systems like DBMS work together to accomplish the information objectives of an organization.

UNIT-A

Management Information Systems A Framework

Importance of MIS; Management Information System: A Concept (Management, Information, And System); MIS: A Definition (Information Technology and MIS); Nature and Scope of MIS (MIS Characteristics, MIS Functions).

Structure and Classification of MIS

Structure of MIS (MIS Structure Bases on Physical Components, Information System Processing Functions, Decision Support, Levels of Management Activities, Organizational Functions); MIS Classification (Transaction Processing System, Management Information System (MIS), Decision Support System (DSS), Executive Support System, Office Automation Systems (OASs), Business Expert Systems (BESs); Functional Information System (Financial Information System, Marketing Information System, Production/Manufacturing Information System, Human Resource Information System.

Decision Making and MIS

Decision-Making, Simon's Model of Decision-Making, Types of Decisions (Purpose of Decision-Making, Level of Programmability, Knowledge of Outcomes); Methods for Choosing among Alternatives (Decision Theory or Decision Analysis, Utility, Decision Tree, Optimization Techniques); Decision Making and MIS.

(10Hours)

UNIT-B

Information and System Concepts

Information : A Definition; Types of Information (Strategic Information, Tactical Information, Operational Information); Information Quality; Dimensions of Information (Economic Dimension, Business Dimension, Technical Dimension); System : Definition (Multiple Meaning of the Word 'System'); Kinds of Systems (Abstract and Physical Systems, Deterministic and Probabilistic Systems, Open and Closed Systems, User-Machine Systems); System Related Concepts (Boundary, Interface and Black Box, System Decomposition, Integration of Sub-Systems); Elements of a System; Human as an Information Processing System (Information Filtering, Human Differences in Information Processing, Implications for Information Systems).

System Development Approaches

System Development Stages (System Investigation, System Analysis, System Design, Construction and Testing, Implementation, and Maintenance); System Development Approaches (Waterfall Model, Prototyping, Iterative Enhancement Model, Spiral Model.

(10Hours)

UNIT-C

System Analysis

Introduction; Requirement Determination (Understand the Process, Identify Data Used and Information Generated, Determine Frequency, Timing and Volume, Know the Performance Controls); Strategies for requirement Determination (Interview, Questionnaire, Record Review, Observation); Structured Analysis Tools (Data Flow Diagram, Data Dictionary, Decision Tree and Structured English, Decision Table).

DAV UNIVERSITY, JALANDHAR

System Design

Design objectives; Conceptual Design (Define Problem, Set System Objectives, Identify constraints, determine information needs, determine information sources, develop various designs, documentation of the conceptual design, report preparation); Design Methods; Detailed System Design (Project Planning and Control, Involve the user, detailed subsystem definition, output/input design, feedback from the user, database design, procedure design, design documentation).

Implementation and Evaluation of MIS

Implementation process (planning and implementation, acquisition of facilities and space planning, MIS Organization and procedure development, User training, acquisition of hardware and software, Creation of forms and database, Testing, Change Over); Hardware and Software Selection (Requirements analysis, Preparation of Tender Specifications, Inviting Tenders, Technical scrutiny and short-listing, Detailed Evaluation, Negotiations and Procurement Decisions, Delivery and Installation, Post Installation Review); Evaluation of MIS (Evaluation Approaches, Evaluation Classes, Product Based MIS Evaluation, Cost/Benefit Based Evaluation); System Maintenance (Corrective Maintenance, Adaptive Maintenance, Perfective Maintenance).

(10Hours)

UNIT-D

Information System Planning

Information System Planning; Planning Terminology (Mission, Objectives, Strategies, Policies); The Nolan Stage Model; The Four Stage Model of IS Planning (Strategic Planning, Information Requirement Analysis, Resource Allocation, Project Planning); Selecting a Methodology; Information Resource Management (IRM); Organization Structure and Location of MIS.

Information System as an Enabler : Introduction; Changing Concepts of IS (Information as a necessary Evil, Information for General Management Support, Information for decision making, Information as a Strategic Resource); IS as an Enabler (Competitive advantage, Organizational Change, Organizational Learning).

Course Title: Parallel Computing
Course Code: CSE406A

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objectives: To impart knowledge of parallel computing systems and techniques.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Apply the fundamentals of parallel and distributed computing including parallel architectures and paradigms.

CO2: Have knowledge on Different Structures of Parallel computational models

CO3: Analyse the performance Metrics and classify parallel processors.

CO4: Develop various parallel algorithms for programming.

UNIT-A

Introduction: Paradigms of parallel computing: Synchronous - vector/array, SIMD, Systolic; Asynchronous- MIMD, reduction paradigm. Hardware taxonomy: Flynn's classifications, Handler's classifications. Software taxonomy: Kung's taxonomy, SPMD.

(9Hours)

UNIT-B

Abstract parallel computational models: Sequential model, need of alternative model, parallel computational models such as PRAM, LMCC, Hypercube, Cube Connected Cycle, Butterfly, Perfect Shuffle Computers, Tree model, Pyramid model, Fully Connected model, PRAM-CREW, EREW models, simulation of one model from another one, Sorting network, Interconnection RAMs. Parallelism approaches - data parallelism, control parallelism.

(10Hours)

UNIT-C

Performance Metrics: Laws governing performance measurements. Metrics - speedups, efficiency, utilization, communication overheads, single/multiple program performances, benchmarks. Parallel Processors: Taxonomy and topology - shared memory multiprocessors, distributed memory networks. Processor organization - Static and dynamic interconnections. Embeddings and simulations.

(12Hours)

UNIT-D

Parallel Programming: Shared memory programming, distributed memory programming, object oriented programming, data parallel programming, functional and dataflow programming. Scheduling and Parallelization: Scheduling parallel programs. Loop scheduling. Parallelization of sequential programs. Parallel programming support environments.

Course Title: Mobile Computing & Communication
Course Code: CSE448

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objectives: To impart knowledge of mobile and wireless computing systems and techniques.

Course outcomes: - After completion of this course, student will be able

CO1: To understand concepts of Mobile Communication.

CO2: To analyse next generation Mobile Communication System.

CO3: To understand network and transport layers of Mobile Communication.

CO4: Analyse various protocols of all layers for mobile and adhoc wireless communication networks.

CO5: To understand IP and TCP layers of Mobile Communication.

UNIT-A

Mobility: Issues, challenges, and benefits; Review of mobile and cellular communication technology; Review of distributed/network operating systems, ubiquitous computing. Global System for Mobile Communication (GSM) System Overview: GSM Architecture, Mobility Management, Network Signalling, GPRS.

(10Hours)

UNIT-B

Mobile IP Networks: Physical mobility, challenges, limits and connectivity, mobile IP and cellular IP in mobile computing. Mobile Transport Layer: Transport layer issues in wireless, Indirect TCP, Snoop TCP, Mobile TCP

(10Hours)

UNIT-C

Wireless LANs: Introduction to IEEE 802.11, Bluetooth technologies and standards. Mobile Adhoc Networks: Hidden and exposed terminal problems; routing protocols: DSDV, DSR, AODV.

(10Hours)

UNIT-D

Mobile Devices and OS: Various types of Devices, Operating System: PalmOS, Windows CE, Windows Mobile. Application Development: WWW programming model, Development Environment for Mobile Devices.

DAV UNIVERSITY, JALANDHAR

Course Title: Cloud Computing
Course Code: CSE428

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: Analyse the components of cloud computing showing how business agility in an organization can be created. Compare and contrast the economic benefits delivered by various cloud models based on application requirements, economic constraints and business requirements.

Course Outcomes: This module gives students the skills and knowledge to understand how Cloud Computing Architecture can enable transformation, business development and agility in an organization.

CO1: Understand the basic cloud computing concepts

CO2: Understand the virtualization fundamentals

CO3: Gain conceptual understanding of cloud service types, such as Software as a Service and Infrastructure as a Service

CO4: Understand the concepts of cloud data storage

CO5: Identify appropriate techniques and tools to cloud application development

UNIT-A

Cloud Computing: Overview, Applications, Intranet and the Cloud, First Movers on the cloud, the need for Cloud Computing, Benefits of cloud Computing, Limitations of the Cloud Computing, security concerns and regulatory issues, over view of different cloud computing applications which are implemented, Business case for implementing a Cloud.

(10Hours)

UNIT-B

Cloud computing and Service Models: Public, Private, and Hybrid Clouds, Cloud Ecosystem and Enabling Technologies, Infrastructure-as-a-Service (IaaS), Platform- and Software-as-a-Service (PaaS, SaaS). Architectural Design of Compute and Storage Clouds: A Generic Cloud architecture Design, Layered Cloud Architectural development, Architectural Design Challenges. Cloud Standards: Applications, Client, Infrastructure, Services.

(11Hours)

UNIT-C

Cloud Computing Mechanisms: Software as a service: Overview, Driving Forces, Company offerings, Industries, Software + services: Overview, Mobile Device Integration, Providers, Microsoft Online Application development: Google, Microsoft, Intuit Quick base, Cast Iron Cloud, Bungee Connect, Development Platforms: Google, Sales Force, Azure, Trouble shooting, Application management

(10Hours)

UNIT-D

Local Clouds: Virtualization, server solutions, Thin Clients

Migrating to the clouds: Cloud services for individuals, Mid-market, and Enterprise wide, Migration, best practices, analysing the service.

(12Hours)

Course Title: Basics of Grid Computing
Course Code: CSE456

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: This Course introduces the Grid Computing and their applications to students. This course covers the different compression standards used in business, some current technology and related issues.

Course Outcomes: After the completion of this course the participants would gain the knowledge of the various technical and management issues regarding Grid business.

C01: Outline the concept of Grid Architectures.

C02: Illustrate the data intensive grid service models and grid computing techniques

C03: Demonstrate the concept of grid software components and administration.

C04: Interpret the security and management models in the grid environment.

UNIT-A

Introduction: Fundamentals of Grid Computing, Types of resources, Problems in Grid computing, Global Distribution System for Grid Computing, Ecosystem of the Grid, Early Grid Activities.

(10Hours)

UNIT-B

Grid Architecture: Autonomic Computing, Service-Oriented Architecture and Grid, Semantic Grids, Merging the Grid Services Architecture with the Web Services Architecture. Open Grid Services Architecture (OGSA)

Grid Computing in Business: Grid-specializing vendors and niche vendors, Grid resource providers, Departmental grids, Enterprise grids, Partner grids, Open grids.

(10Hours)

UNIT-C

Grid software components: Management components, Donor software, Submission software, Distributed grid management, Schedulers, Enrolling and installing grid software, Logging onto the grid, Logging onto the grid

Grid administration: Planning, Installation, Managing enrollment of donors and users, Certificate authority, Resource management, Data sharing.

(12Hours)

UNIT-D

Technical and Management Issues: Building and selling Grid business case, transition period management, Role of consultants, Risk Mitigation, Organizational security requirements and firewalls, Authorization scalability and federations.

Case Study: The MCNC Enterprise Grid: Service, Customers, Financials, Resources, Location.

(11Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Operational Research
Course Code: CSE460

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objectives:

1. To understand the methodology of OR problem solving and formulate linear programming problem.
2. To develop formulation skills in transportation models and finding solutions
3. To understand the basics in the field of game theory and assignment problems
4. To know how project management techniques help in planning and scheduling a project
5. To know the basics of dynamic programming and simulation.

Course Outcomes: After successful completion of the course, the students are able to

CO1: Recognize the importance and value of Operations Research and linear programming in solving practical problems in industry

CO2: Interpret the transportation models' solutions and infer solutions to the real-world problems.

CO3: Recognize and solve game theory and assignment problems.

CO4: Gain knowledge of drawing project networks for quantitative analysis of projects

CO5: Know when simulation and dynamic programming can be applied in real world problems.

UNIT-A

Introduction to Operations Research: Basics definition, scope, objectives, phases, models and limitations of Operations Research. Linear Programming Problem – Formulation of LPP, Graphical solution of LPP. Simplex Method, Artificial variables, Big-M method, two-phase method, degeneracy and unbound solutions.

Transportation Problem. Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions – Northwest corner rule, least cost method and Vogel's approximation method. Optimality test: the stepping stone method and MODI method.

Assignment model. Formulation. Hungarian method for optimal solution. Solving unbalanced problem. Traveling salesman problem and assignment problem.

(11Hours)

UNIT-B

Sequencing models. Solution of Sequencing Problem – Processing n Jobs through 2 Machines – Processing n Jobs through 3 Machines – Processing 2 Jobs through m machines – Processing n Jobs through m Machines.

Dynamic programming-Characteristics of dynamic programming. Dynamic programming approach for Priority Management employment smoothening, capital budgeting, Stage Coach/Shortest Path, cargo loading and Reliability problems

(12Hours)

UNIT-C

Games Theory-Competitive games, rectangular game, saddle point, minimax (maximin) method of optimal strategies, and value of the game. Solution of games with saddle points, dominance principle. Rectangular games without saddle point – mixed strategy for 2 X 2 games.

Replacement Models- Replacement of Items that deteriorate whose maintenance costs increase with time without change in the money value. Replacement of items that fail suddenly: individual replacement policy, group replacement policy.

(12Hours)

UNIT-D

Inventory models-Inventory costs. Models with deterministic demand – model (a) demand rate uniform and production rate infinite, model (b) demand rate non-uniform and production rate infinite, model (c) demand rate uniform and production rate finite.

DAV UNIVERSITY, JALANDHAR

Course Title: Fuzzy Logic and Neural Networks
Course Code: CSE422

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objectives:

1. To Expose the students to the concepts of feed forward neural networks
2. To provide adequate knowledge about feedback networks.
3. To teach about the concept of fuzziness involved in various systems. To provide adequate knowledge about fuzzy set theory.
4. To provide comprehensive knowledge of fuzzy logic control and adaptive fuzzy logic and to design the fuzzy control using genetic algorithm.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: To Expose the students to the concepts of feed forward neural networks

CO2: To provide adequate knowledge about feedback networks

CO3: To teach about the concept of fuzziness involved in various systems. To provide adequate knowledge about fuzzy set theory

CO4: To provide comprehensive knowledge of fuzzy logic control and adaptive fuzzy logic and to design the fuzzy control using genetic algorithm

CO5: To provide adequate knowledge of application of fuzzy logic control to real time systems

UNIT -A

Neural networks characteristics, History of development in neural networks principles, Artificial neural net terminology, Model of a neuron, Topology, Learning, types of learning, Supervised, Unsupervised, Reinforcement learning. Knowledge representation and acquisition.

(12Hours)

UNIT -B

Basic Hop field model, Basic learning laws, unsupervised learning, Competitive learning, K-means clustering algorithm, Kohonen's feature maps.

(12Hours)

UNIT -C

Radial basis function neural networks, Basic learning laws in RBF nets, Recurrent back propagation, Introduction to counter propagation networks, CMAC network, and ART networks.

Fuzzy Logic I: Basic concepts of fuzzy logic, Fuzzy Vs Crisp set, Linguistic variables, Membership functions, Operations of fuzzy sets.

(12Hours)

UNIT- D

Fuzzy Logic II: Fuzzy IF-THEN rules, Variable inference techniques, De-Fuzzification, Basic fuzzy inference algorithm, Fuzzy system design, PID control, Antilock Breaking system (ABS)

(12Hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Database Administration
Course Code: CSE412

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: This course uses the latest database tools and techniques to prepare the student to understand, develop, and manage more advanced database applications. Students gain considerable hands-on experience with the Oracle family of databases, and define, design, and implement databases. Students learn how to use object-oriented technologies to design relational databases, and how to design relational databases to support object-oriented applications.

Course Outcomes: Upon completion of this course the student will be able to:

C01: Design, model and install any database management systems by using Oracle database as sample.

C02: Plan, design, construct, control and manage database instances, database network environment, storage structures, user security, database backup and recovery, database maintenance

C03: Define and devise transaction management, concurrency control, crash recovery components

C04: Examine and perform data base administration roles and operations by using Oracle database system as a sample.

C05: Compare and contrast by examining the database systems and new trends in data storage, data retrieval and maintenance techniques.

UNIT-A

Introduction to Database: Client/Server Concept, Types of Databases, Relational Vs. Flat File Database. Background of SQL Server, Versions of SQL Server and Clients Supported by SQL Server

SQL Server 2000: Installation & Configuring SQL Server: Installing SQL Server 2000, Unattended Installations, SQL Server Services. Configuring SQL Server Network Protocol Settings. Installing SQL Server Clients.

(10Hours)

UNIT-B

SQL Server Tools and Utilities: Managing SQL Server with Enterprise Manager, Query Analyzer, SQL Server Groups. Tools Menu, Action Menu. Introduction to Transact –SQL (T-SQL)

Managing Database: Creating Database, Database File Placement (RAID 0, RAID 1 RAID 5), Creating Database using T-SQL and Enterprise Manager. Altering, Renaming, Dropping Database.

Creating Objects in Database: Tables, Views, Constraints, Indexes.

(11hours)

UNIT-C

Managing Security: Understanding Security Modes, Windows Authentication Modes, Mixed Mode, SQL Server Logins, Windows Logins, Fixed Server Logins, Creating Users, Database Roles, (Grant, Revoke ,Deny) N-Tier Security..

Database Backups and Restore: Copying Database with Copy Database Wizard. SQL Database Backup Modes (Full, Differential, Transactional Log Backup).Backing up of the Database. Restoring Database. DTS: Its meaning, DTS Packages. DTS Storage and Designer.

(12hours)

UNIT-D

SQL Server Agent: Configuring Understanding Alerts, Jobs and Events.

Creating Jobs: Multi Server Jobs, Creating, Editing and Deleting of Jobs. SQL Server and IIS. Understanding the Static Page and Dynamic Pages of the Internet. Internet Database Connector.

Replication and Performance Optimization: Overview of Replication Installing.

Types of Replication: Merge Replication, Snapshot Replication, Transactional Replication.

Using Windows System Monitor: Monitor with SQL Profiler and Query Analyzer. Optimization Techniques: Queries and Stored Procedure, Proper Indexing, Locks and Defragmentation

(12hours)

DAV UNIVERSITY, JALANDHAR

Course Title: Network Security
Course Code: CSE434

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: The objective of this course is to gain an understanding of various methods, and protocols used in network security.

Course Outcomes: After the completion of this course the participants would gain the knowledge of various protocols of networking, security issues and password authentication protocols.

After successful completion of the course the students should be able to:

CO1: Identify the security issues in the network and resolve it.

CO2: Analyse the vulnerabilities in any computing system and hence be able to design a security solution.

CO3: Evaluate security mechanisms using rigorous approaches by key ciphers and Hash functions.

CO4: Demonstrate various network security applications, IPsec, Firewall, IDS, Web Security, Email Security and Malicious software etc.,

UNIT-A

Overview of computer networks, seven-layer architecture, TCP/IP suite of protocols. Introduction to information Security, Types of information security controls, need of Information Security, Allocation of information security responsibilities, Security mechanisms, Identification of Security threats and their effects on security, Technologies and Security policies, real time Communication security. An introduction to LAN/WAN Security and internet Security, Security Management for the World Wide Web and Internet firewalls and how to get past the firewall, Steganography, Layers and Cryptography.

(11Hours)

UNIT-B

Overview of Authentication schemes: Password and address based Authentication, Cryptographic Authentication protocols, Trusted Intermediaries and session key establishment. **Authentication of people:** Passwords, Online and offline password guessing, eavesdropping, password and careless users, authentication tokens and biometrics.

(12Hours)

UNIT-C

Security handshake pitfalls: Mutual authentication, Integrity for data, Mediated Authentication, Strong password protocols: EKE, SRP, SPEKE and PDM.

Public key infrastructure (PKI): Terminology, PKI trust models, Revocation and Authorization futures.

IPsec: Overview of IPsec, IP and IPv6, AH and ESP, IKE, SSL/TLS.

(12Hours)

UNIT-D

Overview of IT Security, Hacking, Hackers and Types of Hackers, Attacks, Denial of Service Attacks(DoS), types of DOS attacks, Viruses and their characteristics, impact they can have on operations and business, Detection and Prevention Mechanisms, types of virus, The self-Hack Audit, VPN.

Intrusion: Intruders, Audit records, Intrusion detection, distributed intrusion detection, honeypots.

Electronic Mail Security: PEM, Structure of PEM Message and S/MIME, PGP etc.

Course Title: Wireless Network Communication
Course Code: CSE462

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: This course is designed to provide the students with a basic understanding and experiential learning of wireless communications and networking.

Course Outcomes: After the completion of this course the participants would gain the knowledge of how a Wireless networks work during data communication between wireless end points and how to implement the Security on it.

CO1: Demonstrate their understanding on functioning of wireless communication system and evolution of different wireless communication systems and standards.

CO2: Compare different technologies used for wireless communication systems.

CO3: Explain the architecture, functioning, protocols, capabilities and application of various wireless communication networks.

CO4: Demonstrate an ability explain multiple access techniques for Wireless Communication

CO5: Demonstrate an ability to evaluate design challenges, constraints and security issues associated with Ad-hoc wireless networks.

UNIT-A

Introduction: Differences between wireless and fixed telephone networks, Evolution of wireless networks, Examples of Wireless Communication Systems: Paging Systems, Cordless Telephone Systems, Cellular Telephone Systems, Comparison of common Wireless Communication systems, Traffic routing in wireless networks: circuit switching and packet switching.

(12 Hours)

UNIT-B

Wireless Local Area Networks: Introduction, WLAN topologies, requirements, working and function of physical layer and MAC layer, IEEE standards for wireless networks, Wi-Fi, Bluetooth, WiMax.

(12 Hours)

UNIT-C

Wireless Internet: Mobile IP components, process of agent discovery, registration and de-registration, care-of-address, concept of tunneling, Limitations of Mobile IP, introduction to micro-mobility protocols.

(12 Hours)

UNIT-D

Ad Hoc Wireless Networks: Introduction, Challenges in ad hoc networks: spectrum allocation, media access, routing, multicasting, energy efficiency, security and privacy; problems in ad hoc channel access, receiver-initiated MAC protocols, sender-initiated MAC protocols and existing ad hoc MAC protocols; Ad hoc routing protocols: Destination sequenced distance vector (DSDV), Ad hoc on demand distance vector routing (AODV), Dynamic source routing (DSR), Temporally ordered routing algorithm (TORA).

DAV UNIVERSITY, JALANDHAR

Course Title: Image Processing and Pattern Recognition
Course Code: CSE404

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Outcomes:

CO1: Identify and describe operation of different smoothing and sharpening filters.

CO2: Students are able to analyze the different segmentation techniques

CO3: Students are able to apply different de-noising models to recover original image.

CO4: Identify different pattern recognition methods and apply them in problem areas.

UNIT-A

Introduction: Digital Image- Steps of Digital Image Processing Systems-Elements of Visual Perception - Connectivity and Relations between Pixels. Simple Operations- Arithmetic, Logical, Geometric Operations. 2D Linear Space Invariant Systems - 2D Convolution - Correlation 2D Random Sequence - 2D Spectrum.

Image Transforms: 2D Orthogonal and Unitary Transforms-Properties and Examples. 2D DFT- FFT - DCT, Histogram Equalization Technique- Point Processing-Spatial Filtering-In Space and Frequency - Nonlinear Filtering-Use of Different Masks.

(12Hours)

UNIT-B

Image Restoration: Image Observation And Degradation Model, Circulant And Block Circulant Matrices and Its Application In Degradation Model - Algebraic Approach to Restoration- Inverse By Wiener Filtering - Generalized Inverse-SVD And Interactive Methods - Blind Deconvolution-Image Reconstruction From Projections.

Image Compression: Redundancy and Compression Models -Loss Less and Lossy. Loss Less- Variable-Length, Huffman, Arithmetic Coding - Bit-Plane Coding, Loss Less Predictive Coding Lossy Transform (DCT) Based Coding, JPEG Standard - Sub Band Coding.

(12Hours)

UNIT-C

Image Segmentation: Edge Detection - Line Detection - Curve Detection - Edge Linking and Boundary Extraction,

Boundary Representation, Region Representation and Segmentation, Morphology-Dilation, Erosion, Opening and Closing. Hit and Miss Algorithms Feature Analysis

(11Hours)

UNIT-D

Colour and multispectral image processing: Colour Image-Processing Fundamentals, RGB Models, HSI Models, Relationship Between Different Models.

Pattern Recognition Representation Feature extraction and Pattern Representation, Concept of Supervised and Unsupervised Classification Introduction to Application Areas

Statistical methods for Pattern Recognition Bayes Decision Theory, Minimum Error and Minimum Risk Classifiers, Discriminant Function and Decision Boundary ,Normal Density, Discriminant Function for Discrete Features ,Parameter Estimation

Course Title: Mobile Application Development
Course Code: CSE458

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Outcomes:

CO1: Be exposed to technology and business trends impacting mobile applications

CO2: Be competent with the characterization and architecture of mobile applications.

CO3: Be competent with understanding enterprise scale requirements of mobile applications.

CO4: Be competent with designing and developing mobile applications using one application development framework.

UNIT-A

Introduction: Mobile operating system, Operating system structure, Constraints and Restrictions, Hardware configuration with mobile operating system, Features: Multitasking Scheduling, Memory Allocation, File System Interface, Keypad Interface, I/O Interface, Protection and Security, Multimedia features.

(12Hours)

UNIT-B

Introduction to Mobile development IDE's, Introduction to Work light basics, Optimization, pages and fragments , Writing a basic program- in Work light Studio, Client technologies, Client side debugging, Creating adapters, Invoking adapters from Work light Client application, Common Controls, Using Java in adapters, Programming exercise with Skins, Understanding Apache Cordova, Offline access, Encrypted cache deprecated, Using JSON Store

(12Hours)

UNIT-C

Understanding Apple iOS development, Android development, Shell Development, Creating Java ME application, Exploring the Work light Server, Working with UI frameworks, Authentication, Push notification, SMS Notifications, Globalization, Web View overlay , Creating Authentication application: development for Apple iOS by using a login module, Device Analytics, Work light Server Administration

(11Hours)

UNIT-D

Android: Introduction to Android, Architecture, memory management, communication protocols, application development methods, deployment. Case Study: Design and development of Application using mobile application development platforms e.g. Work Light, Kendo, Appcon, Xcode, Xpages Unit VI: iOS: Introduction to iOS, Architecture, memory management, communication protocols, application development methods, deployment. Case Study: Design and development of Application using mobile application development platforms e.g. Work Light, Kendo, Appcon, Xcode, Xpages

DAV UNIVERSITY, JALANDHAR

Course Title: Cyber Laws & IPR
Course Code: CSE408A

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective: This syllabus presents the meaning and definition of cybercrime, the legislation in India dealing with offences relating to the use of or concerned with the abuse of computers or other electronic gadgets. The Information Technology Act 2000 and the I.T. Amendment Act 2008 have been dealt with in detail and other legislations dealing with electronic offences have been discussed in brief.

Course Outcomes (COs): After successfully completing this course the students will be able to

CO1: Have depth knowledge of information technology act and legal frame work of right to privacy, data security and data protection

CO2: Classify cybercrimes and criminals

CO3: Describe cyber security and its problem and regulation and jurisdiction for solution of it.

CO4: Analyzing the sources of risk and fundamentals of copy right

CO5: Demonstrate various corporate policies

UNIT-A

Cyber laws: Introduction to the Cyber World and Cyber Law, Information Technology Act, 2000 –Digital Signature; E-Governance; Regulation of Certifying Authorities; Duties of pub sscribers; Penalties and Adjudications; Offences under the Act; Making of Rules and Regulations etc. Cyber Crimes Introduction–computer crime and cybercrimes; Classification of cybercrimes. Cyber forensic, Cyber criminals and their objectives Kinds of cybercrimes –cyber stalking; cyber pornography; forgery and fraud; crime related to IPRs; Cyber terrorism; computer vandalism.

(11Hours)

UNIT-B

Cyber Security: Cyber Security and its problem-Intervention Strategies: Redundancy, Diversity and Autarchy. Private ordering solutions, Regulation and Jurisdiction for global Cyber security, Copy Right-source of risks, Pirates, Internet Infringement, Fair Use, postings, criminal liability, First Amendments, Data Losing

(11Hours)

UNIT-C

Copy Right: Source of risks, Pirates, Internet Infringement, air Use, postings, Criminal Liability, First Amendments, Losing Data, Trademarks, Defamation, Privacy-Common Law Privacy, Constitutional law, Federal Statutes, Anonymity, Technology expanding privacy rights. Duty of Care, Criminal Liability, Procedural issues, Electronic Contracts & Digital Signatures, Misappropriation of information, Civil Rights, Tax, Evidence. Information security policies and procedures: Corporate policies-Tier 1, Tier 2 andTier3 policies -process management-planning and preparation-developing policies-asset classification policy developing standards.

(13Hours)

UNIT-D

Corporate policies-Tier 1, Tier 2 and Tier3 policies -process management-planning and preparation-developing policies-asset classification policy developing standards.

DAV UNIVERSITY, JALANDHAR

Course Title: Web Technology
Course Code: CSE464

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Outcomes: Upon successful completion of this course, the student will be able to:

CO1: Plan, design, create, and implement a web site;

CO2: Use the concept of XML, CSS and DHTML

CO3: Develop a static and dynamic websites.

CO4: Establish the database connectivity over a website.

UNIT-A

Introduction to HTML: HTML Common tags- List, Tables, images, forms, Frames; Cascading Style sheets; Introduction to JavaScript: Scripts, Objects in Java Script, Dynamic HTML with Java Script XML: Document type definition, XML Schemas, Document Object model, Presenting XML, Using XML Processors: DOM and SAX

(12Hours)

UNIT-B

Java Beans: Introduction to Java Beans, Advantages of Java Beans, JDK Introspection, Using Bound properties, Bean Info Interface, Constrained properties Persistence, Customizes, Java Beans API, Introduction to EJB's Web Servers and Servlets: Tomcat web server, Introduction to Servlets: Lifecycle of a Servlet, JSDK, The Servlet API, The javax.servelet Package, Reading Servlet parameters, and Reading Initialization parameters. The javax.servelet HTTP package, Handling Http Request & Responses, Using Cookies-Session Tracking, Security Issues

(12Hours)

UNIT-C

Introduction to JSP: The Problem with Servlet. The Anatomy of a JSP Page, JSP Processing. JSP Application Design with MVC Setting Up and JSP Environment: Installing the Java Software Development Kit, Tomcat Server & Testing Tomcat

JSP Application Development: Generating Dynamic Content, Using Scripting Elements Implicit JSP Objects, Conditional Processing – Displaying Values Using an Expression to Set an Attribute, Declaring Variables and Methods Error Handling and Debugging Sharing Data between JSP pages, Requests, and Users Passing Control and Date between Pages – Sharing Session and Application Data – Memory Usage Considerations

(11Hours)

UNIT-D

Database Access: Database Programming using JDBC, Studying Javax.sql.* package, Accessing a Database from a JSP Page, Application – Specific Database Actions, Deploying JAVA Beans in a JSP Page, Introduction to struts framework. One android application development

DAV UNIVERSITY, JALANDHAR

Course Title: Big Data Analytics
Course Code: CSE466

| L | T | P | Credits |
|---|---|---|---------|
| 4 | 0 | 0 | 4 |

Course Objective:

To explore the fundamentals concepts of big data analytics. To learn and understand the concept of big data intelligent techniques, various search methods and visualization techniques.

Course Outcomes:

- CO1: Understand the concepts of distributed file system
- CO2: Learn abstraction of hadoop environment
- CO3: Study the hadoop architecture
- CO4: Know the hadoop ecosystem and yarn components
- CO5: Learn different architecture like HIVE and HIVEQL, HBASE

UNIT – A

Introduction to Big Data: Overview of Big Data, Stages of analytical evolution, Challenges of Conventional Systems, Intelligent data analysis, Nature of Data, Analytic Processes and Tools, Analysis vs. Reporting, Modern Data Analytic Tools, Statistical Concepts: Sampling Distributions - Re-Sampling, Statistical Inference - Prediction Error

(11Hours)

UNIT – B

Mining Data Streams: Introduction To Streams Concepts, Stream Data Model and Architecture, Stream Computing, Sampling Data in a Stream, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments, Counting Oneness in a Window, Decaying Window, Real time Analytics Platform(RTAP) Applications

(12Hours)

UNIT – C

Hadoop: History of Hadoop, The Hadoop Distributed File System, Components of Hadoop, Analyzing the Data with Hadoop, Scaling Out- Hadoop Streaming, Design of HDFS-Java interfaces to HDFSBasics, Developing a Map Reduce Application, How Map Reduce Works, Anatomy of a Map Reduce Job run-Failures, Job Scheduling-Shuffle and Sort, Task execution, Map Reduce Types and Formats, Map Reduce Features

(12Hours)

UNIT – D

Frameworks: Applications on Big Data Using Pig and Hive, Data processing operators in PigHive services, HiveQL, Querying Data in Hive, Fundamentals of HBase and Zookeeper, Visualizations:Visual data analysis techniques, interaction techniques. Systems and applications

(11Hours)
