DAV UNIVERSITY JALANDHAR

Scheme and Syllabi

for
B.Tech. Computer Science Engineering

1st TO 8thSEMESTER
Examinations 2024–2025 Session

Syllabi Applicable For Admissions in 2024

DAV UNIVERSITY, JALANDHAR

B.Tech CSE is a captivating, distinctively innovative subject that inspires students to pursue creativity and technological advances. The course emphasizes the foundations of networking and computer programming while covering various topics. The concepts covered in computer science include logic, algorithms, abstraction, and computability, such as networking, distributed databases, information processing, programming languages, and many other subjects. The B.Tech program in Computer Science and Engineering has become more prevalent to pursue careers as systems analysts, web developers, finance programmers, software engineers, product managers, game developers, and other positions.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO's)

PEO1: The program graduates will have a firm grounding in the theories and methods of Computer Science, as well as in mathematics, science, and fundamental engineering.

PEO2: The program graduates will be prepared for promising careers in the software industry or to pursue higher studies and strengthen their professional knowledge.

PEO3: The program graduates will work in their field with morals, benevolence, social conscience, and governance.

PROGRAMME OUTCOMES (POs)

After the successful completion of undergraduate course, Computer Science & Engineering, graduates will be able to:

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSO's)

PSO1: Academic Competence: Understanding, analysing, and acquiring indispensable expertise in the fields of programming, algorithms, database systems, computer networks and artificial intelligence and then apply that knowledge to address logistical problems.

PSO2: Professional Competence: For a successful career and entrepreneurial endeavours, use best practices and strategies in the development of hardware and software projects.

L	**T**	**P**	**Credit**
3	1	0	4

Course Code	**MAT151**						
Course Title	**Engineering Mathematics-I**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Understand the theory of matrices used in solving the problems in mechanics and other streams. CO2: Understand the concept of partial differentiation, Euler's theorem and its extension, total derivative, maxima and minima of a function of two variables, and Lagrange's method of multipliers. CO3: Understand the concept of ordinary differential equation and their solutions (Homogeneous, differential equation, Exact differential equations). CO4: Understand the solution of differential equations with constant coefficients by method of variation of parameters and simultaneous linear differential equations.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (15hours)** Rank of matrices, Inverse of Matrices, Gauss Jordan Method, reduction to normal form, Consistency and solution of linear algebraic system of equations, Gauss Elimination Method, Eigen values and Eigen vectors, Diagonalisation of Matrix, Cayley Hamilton theorem. Orthogonal, Hermition and unitary matrices.						**CO1**
	Unit 2: (15hours) Concept of limit and continuity of a function of two variables, Partial derivatives, Homogenous Function , Euler's Theorem Total Derivative, Differentiation of an implicit function, chain rule Change of variables, Jacobian, Taylor's and McLaurin's series, Maxima and minima of a function of two and three variables: Lagrange's method of multipliers.						**CO2**
	Unit 3: (15hours) Formation of ordinary differential equations, solution of first order differential equations by separation of variables Homogeneous equations, Reduce to Homogenous Exact differential equations, equations reducible to exact form by integrating factors Equations of the first order and higher degree, clairaut's equation.						**CO3**

	Unit 4: (15hours) Solution of differential equations with constant coefficients Method of differential operators. Homogeneous equations of second order with constant coefficients: Solution by method of variation of parameters Simultaneously Linear differential equation	**CO4**

Course Code	**PHS151**						
Course Title	**Engineering Physics**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: To generate Knowledge of wave optics with particular emphasize on interference, diffraction, polarization CO2: To enhance understanding LASER, its working mechanism and various types. Knowledge of fibre optics CO3: To create cognizance of superconductivity, Quantum Physics and Nanophysics CO4: To make students cover the bridge between theory and practical by analysing the obtained data.						
Examination Type	Theory + Practical(30hrs)						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	ATTENDANCE
Weightage	**10**		**25**	**0**	**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (15hours)** **Interference:** Division of wave front, Fresnel's biprism, division of amplitude, Newton's rings and applications **Diffraction:** Difference between Fraunhofer and Fresnel diffraction, Fraunhofer diffraction through a slit, plane transmission diffraction grating, its dispersive and resolving power **Polarization:** Polarized and unpolarised light, double refraction, Nicol prism, quarter and half wave plates.						**CO1**
	Unit 2: (15hours) LASER: Spontaneous and stimulated emission, Laser action, Characteristics of laser beam, concept of coherence, He-Ne laser, Semiconductor laser, Ruby laser and applications, Holography FIBRE OPTICS: Propagation of light in fibers, numerical aperture, single mode and multimode fibers, applications						**CO2**

	Unit 3: (15hours) Difficulties with Classical physics, Introduction to quantum mechanics, Black Body radiation, Planck's Law of radiation, Photo electric effect , Wave particle duality, Heisenberg uncertainty principle, Time dependent and Time independent Schrodinger's wave equation concept of wave function. Introduction to Nano science and Nanotechnology, Electron confinement, Nanomaterial, Nanoparticles, Quantum structure, CNT, Synthesis of Nanomaterial and Application of Nanomaterial. Introduction (experimental survey), Meissner effect, Type I and type II superconductors, London equation, Elements of BCS theory, Applications of superconductors	**CO3**
	Unit 4: (15hours) **Experimental skills:** General Precautions for measurements and handling of equipment, representation of measurements, Fitting of given data to a straight line, and Error analysis, Significant figures and interpretation of results. 1. To determine wavelength of sodium light using Newton's Rings. 2. Study of Solar Cell characteristics. 3. To compare the focal length of two lenses by Nodal slide method. 4. To determine the beam divergence of the He-Ne laser. 5. To compare the two unknown capacitances of two capacitors by using De Sauty's bridge. 6. To find our out the unknown inductance by using the Anderson's bridge method. 7. To determine the Refractive Index of the Material of a given Prism using Sodium Light. 8. Determination of Plank's constant using photoelectric effect. 9. To study the capacitance by flashing/quenching of Neon bulb kit. To study the specific rotation of sugar solution Laurent's half shade Polari meter method.	**CO4**

Syllabus	Unit 1: (11hours) **D.C Circuit Analysis:** Voltage source, current source, dependent and independent sources, analysis of D.C circuit by KCL and KVL , Nodal and Mesh analysis, Superposition theorem, Maximum Power Transfer Theorem, Thevenin and Norton Theorems						CO1
	Unit 2: (12hours) **A.C Circuit Analysis:** Review of single phase A.C. circuit under sinusoidal steady state, RMS Value, Average Value, Form factor, Peak factor solution of RL, RC, R.L.C. Series circuit, the j operator, complex representation of impedance, solution of series circuit, series resonance, 3 phase A.C. Circuit, star and delta connections, line and phase quantities solution of 3 phase circuits, balance supply voltage and balanced supply voltage and balance load, Phasor diagram, measurement of power and power factor.						CO2
	Unit 3: (12hours) **Magnetic Circuit & Transformers:** H Curve, saturation leakage and fringing. Hysteresis and eddy currents.Single phase transformer, basic concepts constructional, voltage, current Transformation, Ideal transformer and its Phasor diagram, voltage regulation, OC/SC test, losses and efficiency, Autotransformer.						CO3

	Unit 4: (12hours) **Rotating Electrical Machines:** Basic concepts, working principle and general construction of DC machines (motor/generators), torque and EMF expression. Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. **Electrical Installations** Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Various faults in Battries, Elementary calculations for energy consumption, power factor improvement and battery backup.	CO4

Syllabus									**CO Mapping**
Unit 1	***Introduction and Theory of Projection*** ***No. of Sheets: 3***								18hr
	Engineering Graphics/Technical Drawing, Introduction to drawing equipments and use of instruments, Conventions in drawing practice. Types of lines and their uses, BIS codes for lines, Technical lettering as per BIS codes, Introduction to dimensioning, Types, Concepts of scale drawing, Types of scales. Theory of projections, Perspective, Orthographic, System of orthographic projection: in reference to quadrants, Projection of Points, Projection in different quadrants, Projection of point on auxiliary planes. Distance between two points, Illustration through simple problems.								CO1
Unit 2	***Projections of Lines and Planes*** ***No. of Sheets: 4***								18hr
	Line Parallel to both H.P. and V.P., Parallel to one and inclined to other, Other typical cases: three view projection of straight lines, true length and angle orientation of straight line: rotation method, Trapezoidal method and auxiliary plane method, traces of line. Projection of Planes Parallel to one and perpendicular to other, Perpendicular to one and inclined to other, Inclined to both reference planes, Plane oblique to reference planes, traces of planes.								CO2
Unit 3	***Projection of Solids, Section of Solids*** ***No. of Sheets: 4***								18hr
	Projection of solids in first or third quadrant, Axis parallel to one and perpendicular to other, Axis parallel to one inclined to other, Axis inclined to both the principle plane, Axis perpendicular to profile plane and parallel to both H.P. and V.P., Visible and invisible details in the projection, Use of rotation and auxiliary plane method.								CO3

	Definition of Sectioning and its purpose, Procedure of Sectioning, Illustration through examples, Types of sectional planes-application to few examples.	
Unit 4	***Development of Surface, Isometric and Orthographic Projection*** ***No. of Sheets: 3***	18 hr
	Purpose of development, Parallel line, radial line and triangulation method, Development of prism, cylinder, cone and pyramid surface for both right angled and oblique solids, Development of surface. Classification of pictorial views, Basic Principle of Isometric projection, Difference between isometric projection and drawing, Isometric projection of solids such as cube, prism, pyramid and cylinder. Review of principle of Orthographic Projection, Examples of simple machine parts, Drawing of Block and machine parts. Introduction to CAD: Interfacing and Introduction to CAD Software, Coordinate System, 2D drafting: lines, circles, arc, polygon, etc., Dimensioning, 2-D Modelling, Use of CAD Software for engineering drawing practices.	CO4
	Total No. of Sheets: 14

S. No.	**LIST OF EXPERIEMENTS**	**CO Mapping**
1.	To study the working principles and operation of normal lathe machine.	CO1
2.	To study the, working and operation of different welding equipment's.	CO1
3.	To study the working principles and operation of wood lathe machine.	CO1
4.	To Study the machining of 3D geometry on soft material such as soft wood or modelling wax.	CO2
5.	To Study the 2D profile cutting on plywood /MDF (6-12 mm) for press fit designs.	CO2
6.	To Study the 3D 2D profile cutting of press fit box/casing in acrylic (3 or 6 mm thickness)/cardboard, MDF (2 mm) board using laser cutter & engraver.	CO2
7.	Scanning of computer mouse geometry surface. 3D printing of scanned geometry using FDM or SLA printer.	CO2
8.	Schematic and PCB layout design of a suitable circuit, fabrication and testing of the circuit.	CO3
9.	Embedded programming using Arduino and/or Raspberry Pi.	CO3
10.	Design and implementation of a capstone project involving embedded hardware, software and machined or 3D printed enclosure.	CO4

	Reference content for theory Syllabus	**CO Mapping**
Unit 1	***An Insight to Learning, Remembering Memory and Emotions: Experience & Expression***	

	Understanding the Learning Process, Kolb's Learning Styles, Assessing and Interpreting. Understanding the Memory process, Problems in retention, Memory enhancement techniques. Understanding Emotions: Experience & Expression, Assessing Empathy, Application with Peers	CO1
Unit 2	***Basics of Design Thinking***	
	Definition of Design Thinking, Need for Design Thinking, Objective of Design Thinking, Concepts & Brainstorming, Stages of Design Thinking Process (explain with examples) – Empathize, Define, Ideate, Prototype, Test. Understanding Creative thinking process, Understanding Problem Solving, Testing Creative Problem Solving. Process of Engineering Product Design, Design Thinking Approach, Stages of Product Design, Examples of best product designs and functions, Assignment – Engineering Product Design	CO2
Unit 3	***Prototyping & Testing***	
	What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, Sample Example, Test Group Marketing. Understanding Individual differences & Uniqueness, Group Discussion and Activities to encourage the understanding, acceptance and appreciation of Individual differences	CO3
Unit 4	***Design Thinking & Customer Centricity***	
	Practical Examples of Customer Challenges, Use of Design Thinking to Enhance Customer Experience, Parameters of Product experience, Alignment of Customer Expectations with Product Design. Feedback loop, Focus on User Experience, Address "ergonomic challenges, User focused design, rapid prototyping & testing, final product, Final Presentation – "Solving Practical Engineering Problem through Innovative Product Design & Creative Solution".	CO4

Course Code	HVE101						
Course Title	**Human Values and Ethics**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Development of a holistic perspective based on self – exploration about themselves (human being), family, society and nature/existence. CO2: Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence CO3: Strengthening of self-reflection. CO4: Development of commitment and courage to act.						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**		**50**		**5**
Examination Mode	Theory + Practical						
Syllabus	Unit 1: **Course Introduction - Need, Basic Guidelines, Content and Processfor Value Education and Understanding Harmony in the Human Being – Harmony in Myself!** Purpose and motivation for the course, recapitulation from Universal Human 1 Values -1, Self – Exploration – what is it? – its content and process; 'Natural Acceptance' and Experiential Validation – as theprocess for self –exploration.Continuous Happiness and Prosperity – A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility – the basic requirements for fulfilment of aspirations of every human being with their correct priority. Understanding the needs of Self ('I') and 'Body' – happiness and physical facility. Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body : Sanyam and Health;correct appraisal of Physical needs, meaning of Prosperity in detail.						CO1
	Unit 2: (14hours) **Understanding Harmony in the Family and Society – Harmony in Human – Human Relationship**: Understanding values in human- human relationship; meaning of Justice(nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and						CO2

	Respect as the foundational values of relationship. Understanding the detailed meaning of Trust and Respect: Difference between intention and competence, Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension Of family): Resolution, Prosperity, fearlessness (trust) and co – existence as comprehensive Human Goals.	
	Unit 3: (14hours) **Understanding Harmony in the Nature and Existence – Whole existence as Coexistence** Understanding the harmony in the Nature. Understanding Existence as Co – existence of mutually interacting unitsin all- pervasive space. Holistic perception of harmony at all levels of existence. Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.	CO3
	Unit 4: (12hours) **Implications of the above Holistic Understanding of Harmony on Professional Ethics** Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order Competence in professional ethics : a. Ability to utilize the professional for competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco- friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems.	CO4

Course Code	**ENH111**						
Course Title	**Cambridge English I**						
Course Outcomes	On the completion of the course the student will be able to CO1: Develop effective listening skills to comprehend spoken English in various contexts and accents, employing strategies such as skimming, scanning, and understanding implicit meaning. CO2: Improve spoken communication skills by expressing ideas fluently, engaging in discussions, role-plays, and collaborative tasks, and applying effective communication strategies. CO3: Enhance reading comprehension abilities to understand and interpret diverse written materials using techniques like skimming, scanning, and critical reading to extract essential information. CO4: Develop writing proficiency to produce well-structured, coherent written pieces, demonstrating accurate grammar usage, vocabulary selection, and effective organization.						
Examination Mode	Theory + Practical

Course Code	**MAT152**						
Course Title	**Engineering Mathematics-II**						
Course Outcomes	On the completion of the course the student will be able to CO1: Understand complex numbers and its applications, summation of trigonometric series. CO2: Understand double, triple integration to use in finding areas and volumes of curves. CO3: Understand vector calculus, del, gradient, divergence, and line and surface integrals. CO4: Understand Convergence, divergence, absolute convergence, uniform convergence and different tests to check convergence.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (11 hours)** **Functions of Complex Variables** Complex Numbers and elementary functions of complex variables.De-Moivre's theorem and its applications. Real and imaginary parts of exponential, logarithmic, circular, inverse circular, hyperbolic, inverse hyperbolic functions of complex variables.Summation of trigonometric series (C+iS method).						**CO1**
	Unit 2: (13 hours) **Integral Calculus** Rectification of standard curves, Areas bounded by standard curves,Volumes and surfaces of revolution of curves. Double and triple integral and their evaluation, change of order of integration, change of variables.Application of double and triple integration to find areas and volumes.Centre of gravity and Moment of inertia.						**CO2**
	Unit 3: (13 hours) **Vector Calculus and its applications** Scalar and vector fields, differentiation of vectors, velocity and acceleration.Del, Gradient, Divergence and Curl, their physical interpretations,Line, surface and volume integrals. Flux, Solenoidal and Irrotational vectors. Gauss Divergence theorem, Green's theorem in plane, Stoke's theorem (without proofs) and their applications.						**CO3**

	Unit 4: (11 hours) **Infinite Series** Convergence and divergence of series, tests of convergence (without proofs): comparison test, Integral test, ratio test. Raabe's test, logarithmic test, Cauchy's root test and Gauss test. Convergence and absolute convergence of alternating series.Uniform Convergence and power Series.	**CO4**

Course Code	**CHM151**						
Course Title	**Chemistry**						
Course Outcomes	On the completion of the course the student will be able to: CO1: Students will be able to understand the basic concept of spectroscopy (IR, UV, and NMR). CO2: Familiarize with the basic properties of water and its uses in industrial and domestic purposes and understand the basic knowledge about corrosion, their classification, different mechanism and understand the various factors influencing corrosion and various methods of corrosion control. CO3: To provide the basic knowledge about the classification of polymer. Familiarize students with a complete packet of information of mechanism of polymerization, the effect of molecular weight on the properties of polymers, and understand the basic concept of polymer reinforced composites. Understand the concept of chemistry in Nano science and nanotechnology. CO4: Apply the concept of physical properties of liquids, pH and to understand the basic objectives of experiments in engineering chemistry.						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**	**0**	**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (12 hours)** Spectroscopy and its Applications General Introduction: Introduction, electromagnetic spectrum, absorption and emission spectrum, atomic and molecular spectroscopy, types of molecular spectra, experimental techniques, selection rules, width, and intensities of spectral lines. UV/Visible Spectroscopy: types of electronic Transitions, Chromophores, Auxochromes, Effect of conjugation on Chromophores, Factors affecting λmax and intensity of spectral lines, effect of solvent on λmax, isosbestic point, applications. IR Spectroscopy: Infrared region, fundamental modes of vibrations and types, theory of infrared spectra, vibrational frequency and energy levels, modes of vibrations of polyatomic molecules, characteristic signals of IR spectrum, fingerprint region, factors affecting vibrational frequency; applications. NMR Spectroscopy: Principle and instrumentation, proton magnetic resonance spectroscopy, number of signals, Chemical shift.						**CO1**
	Unit 2: (12 hours) Water and its treatment & Corrosion and its Prevention						**CO2**

	Introduction, hardness of water, degree of hardness, units of hardness, boiler feed water: specification, scales, and sludge formation; priming& foaming, boiler corrosion. Treatment of boiler feed water, internal treatment of water; softening of water by lime-soda, zeolite, and ion exchange methods. Introduction; different types of corrosion - wet and dry corrosion; mechanism of wet corrosion; comparison of dry and wet corrosion, Types of electrochemical corrosion. Galvanic corrosion, concentration cell corrosion or differential aeration corrosion, waterline corrosion, pitting corrosion, crevice corrosion, stress corrosion, intergranular corrosion. Passivity, galvanic series, factors influencing corrosion, various methods of corrosion control.	
	Unit 3: (14 hours) Polymers and Reinforce composites Introduction, monomer and repeating unit, degree of polymerization, functionality, and classification of polymers: based on origin, monomers, structure, method of synthesis, tacticity or configuration, action of heat, chemical composition, and ultimate form. Types of polymerization, specific features of polymers, regularity and irregularity, tacticity of polymers. Average molecular weights and size, determination of molecular weight by number average methods, effect of molecular weight on the properties of polymer. Introduction to polymer reinforced composites. Introduction to Nano composites, Materials self-assembly, self-assembling materials, two dimensional assemblies, Nano scale materials, future perspectives applications, nano composites, and its applications.	**CO3**
	Unit 4: (14 hours) **Practical** Preparation of a polymer phenol/urea formaldehyde resin. Determination of surface tension of given liquid by using Stalagmometer. Determination of the viscosity of given lubricating oil by using Redwood Viscometer. Determination of the strength of HCl solution by titrating against NaOH using pH meter. Determine the strength of HCl solution by titrating against NaOH solution conductometerically. Determination of total hardness of water (tap) using standard EDTA solution and Eriochrome black T indicator. Determination of residual chlorine in a water sample. Determination of dissolved oxygen present in given sample of water. Determination of alkalinity of water.	**CO4**

Weightage	-	-	-	20	-	30	-	50	100
Syllabus									**CO Mapping**
Unit 1	***Carpentry Shop and Welding shop***								12hr
	Introduction, Classification of wood, Seasoning of wood, Classification of carpentry tools, Joints and joining processes, Wood working machines and processes, safety precaution, Preparation of half lap joint, Preparation of Mortise and Tenon Joint, Preparation of a Dove & Tail joint, To prepare a White board duster. Introduction, Various welding processes with brief introduction, Electric Arc welding, Arc welding procedure, List of equipment for electric arc welding, Gas welding process and equipment, Preparation of Joint by Arc Welding, Preparation of Joint by using Gas Welding, Preparation of Joint by MIG/ TIG Welding, Preparation of Joint by Spot/ Seam Welding.								CO1
Unit 2	***Fitting shop and Foundry shop***								12hr
	Introduction, Tools used in fitting, measuring and marking tools, the process of making sawing, Filling, Tapping and die, Introduction to drills, Filing a dimensioned rectangular or square piece and prepare a sq. fitting, Preparation of T fitting male part, Preparation of U fitting Female part, Internal thread Cutting in Square piece and external thread cutting on a rod and assembling as a paper weight. Introduction, Basic terminology, Pattern, Types of patterns, Patterns allowances, Tools for hand Moulding, Moulding sand and Moulding process, Crucible furnace, Operation of cupola, Foundry containers, Casting defects, Safety precautions, To make a Mould of solid pattern, To prepare a mould of sleeve fitting using gating system, To make a Mould of Split Pattern using Cope & Drag, To check the Hardness of the Mould.								CO2
Unit 3	***Sheet- Metal Shop and Machine Shop***								12hr

	Introduction, Types of sheets (ferrous/non-ferrous), Standard sheet sizes and their measurement, Tools used in sheet metal. Preparation of a funnel from G.I. sheet, Preparation of a book rack stand from G.I. Sheet, Preparation of a leak proof tray with inclined edges from G.I. Sheet, Preparation of a square pen stand from G.I. Sheet with riveting at corners. Introduction, Classification of machine tools and cutting tolls, Basic operations on lathe, Drilling, Shaper, Milling, Cutting tool material, Work-holding devices, To make a job using step turning and grooving, To make a job using knurling and threading, To make a multi operation job on a Lathe machine, To make V – slot by using shaper machine	CO3
Unit 4	***Smithy Shop and Electrical Shop***	12hr
	Introduction, Types of forging, Equipment used in the smithy shop, Smithy tools, Black smith's hearth, Hand forging operations. To Forge the L – Hook, To Forge a Chisel, To Forge a Cube from a M.S Round, To forge a screw driver. Layout of electrical tube light wiring, Layout of stair case wiring using two-way switch, Testing and rectification of simulated faults in electrical appliances such as 'Electric Iron' Ceiling Fan. Electric kettle, To fabricate a circuit for the electrical wiring of Fan with regulator and Bulb through a main switch and its testing using a series lamp	CO4

Assessment Tools	Quiz	Assignment	Attendance	MSE	ESE	Total
Weightage	10	10	5	25	50	100
Syllabus						**CO Mapping**
Unit 1	**Introduction to Programming(11hours)**					
•	Introduction to Programming: Computer system, components of a computer system, computing environments, computer languages, creating and running programs, Algorithms, flowcharts. Introduction to C language: History of C, basic structure of C programs, process of compiling and running a C program, C tokens, keywords, identifiers, constants, strings, special symbols, variables, data types, I/O statements.					CO1
Unit 2	**Operators, Expressions and Control Structures(12hours)**					
•	Operators and expressions: Operators, arithmetic, relational and logical, assignment operators, increment and decrement operators, bitwise and conditional operators, special operators, operator precedence and associativity, evaluation of expressions, type conversions in expressions. Control structures: Decision statements; if and switch statement; Loop control statements: while, for and do while loops, jump statements, break, continue, goto statements.					CO2
Unit 3	**Arrays, strings and functions(12hours)**					
•	Arrays: Concepts, One dimensional array, declaration and initialization of one dimensional arrays, two dimensional arrays, initialization and accessing, multi-dimensional arrays. Functions: User defined and built-in Functions, storage classes, Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference, Recursion Strings: Arrays of characters, variable length character strings, inputting character strings, character library functions, string handling functions.					CO3
Unit 4	**Pointers, Structures and File Handling(11hours)**					
•	Pointers: Pointer basics, pointer arithmetic, pointers to pointers, generic pointers, array of pointers, functions returning pointers, Dynamic memory allocation.					CO4

	Structures and unions: Structure definition, initialization, accessing structures, nested structures, arrays of structures, structures and functions, unions, typedef, enumerations. File handling: command line arguments, File modes, basic file operations read, write and append,

Weightage	-	20	-	30	50	100
Syllabus						**CO Mapping**
Unit 1	**Introduction to Programming(10hours)**					
•	WAP that accepts the marks of 5 subjects and finds the sum and percentage marks obtained by the student. WAP that calculates the Simple Interest and Compound Interest. The Principal, Amount, Rate of Interest and Time are entered through the keyboard. WAP to calculate the area and circumference of a circle. WAP that accepts the temperature in Centigrade and converts into Fahrenheit using the formula C/5=(F32)/9. WAP that swaps values of two variables using a third variable.					CO1
Unit 2	**Operators, Expressions and Control Structures(11hours)**					
•	WAP that checks whether the two numbers entered by the user are equal or not. WAP to find the greatest of three numbers. WAP that finds whether a given number is even or odd. WAP that tells whether a given year is a leap year or not. WAP that accepts marks of five subjects and finds percentage and prints grades according to the following criteria: Between 90-100----------Print 'A' 80-90----------Print 'B' 60-80----------Print 'C' Below 60----------Print 'D' WAP that takes two operands and one operator from the user and perform the operation and prints the result by using Switch statement. WAP to print the sum of all numbers up to a given number. WAP to find the factorial of a given number. WAP to print sum of even and odd numbers from 1 to N numbers. WAP to print the Fibonacci series. WAP to check whether the entered number is prime or not.					CO2

	WAP to find the reverse of a number. WAP to print Armstrong numbers from 1 to 100.	
Unit 3	**Arrays, strings and functions(12hours)**	
•	WAP that simply takes elements of the array from the user and finds the sum of these elements. WAP to find the minimum and maximum element of the array. WAP to search an element in a array using Linear Search. WAP to add and multiply two matrices of order nxn. WAP to implement strlen (), strcat (),strcpy () using the concept of Functions.	CO3
Unit 4	**Pointers, Structures and File Handling(12hours)**	
•	WAP to implement the concept of Structures and Union WAP to swap two elements using the concept of pointers. WAP to compare the contents of two files and determine whether they are same or not. WAP to check whether a given word exists in a file or not. If yes then find the number of times it occurs.	CO4

Course Title	**Environment Studies**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: **CO1**: **To Understand the interconnected and interdisciplinary nature of environmental studies and develops critical thinking skills in relation to environmental affairs. Acquire knowledge about the depletion of the root cause of natural resources and their effective management.** **CO2**: **To aware about the ecosystems, biodiversity and its importance to mankind. Interpret and propose solutions to various environmental pollution, solid waste and disaster management.** **CO3**: **Expand awareness of self in a global society and effectively engage diverse perspectives, values, and cultures, ranging from local to global in dealing with environmental and social issues. Awareness about effect of population increase on humans itself. Causes of spread of different diseases in society. How Indian government is supporting women and children that considered weakest section of society.** **CO4**: **Field visits and practical applications will help the students to enhance their skills for the betterment of environment.**						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**0**	**25**	**0**	**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (11hours)** **Introduction to Environmental Studies, Natural Resources and Ecosystem** • The multidisciplinary nature of environmental studies • Natural Resources: Renewable and non-renewable resources. • Forest resources: Use and over-exploitation • Water resources: Over-utilization of surface and ground water • Mineral resources: Use and exploitation, environmental effects of mining • Food resources: Effects of modern agriculture on environment • Energy resources: renewable and non-renewable energy sources. • Land resources: Uses and land degradation, soil erosion • Ecosystem: Structure and function of an ecosystem. Producers, consumers and decomposers						CO1

	• Energy flow in the ecosystem, Ecological succession • Food chains, food webs, ecological pyramids	
	Unit 2: (11hours) **Biodiversity and Environmental Pollution** • Biodiversity definition. Genetic, species and ecosystem diversity. Bio-geographical classification of India. • Value of biodiversity. India as mega-diversity nation. Hot-spots of biodiversity. • Threats to biodiversity. Man wildlife conflicts. In-situ and Ex-situ conservation of biodiversity. • Environmental Pollution: Definition, causes, effects and control measures of: Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, nuclear pollution • Solid waste management and techniques. • Disaster management: floods, earthquake, cyclone and landslides.	CO2
	Unit 3: (11hours) **Social Issues, Human Population and Environment** • Sustainable Development: From unsustainable to sustainable development. Urban problems related to energy. • Water conservation: Rain water harvesting and watershed management. Resettlement and rehabilitation of people • Environmental Issues: Climate change, global warming, acid rain, ozone depletion, nuclear accidents and holocaust. • Wasteland reclamation. Consumerism and waste products. • Environmental Laws: The Environment Protection Act, 1986; The Air Act, 1981; The Water Act, 1974; The Wildlife Protection Act, 1972; Forest Conservation Act, 1980. • Human Population and Environment: Population growth and population explosion, causes and effects • HIV/ AIDS • Women and child welfare programmes in India • Role of IT in environment and human health.	CO3
	Unit 4: (12hours) **Practical's and field study** • Visit to sewage treatment plant and rain water harvesting system • Solid waste management by vermi-composting and biogas plant • Visit to incineration plant of your area.	CO4

	• A visit to pond, river and lake ecosystem • Visit to different industries with respect to pollution • Testing of water parameters: Hardness, pH, Conductivity, Total dissolved solids, Total suspended solids, BOD and DO • Study of plants in their natural habitat

Syllabus		CO Mapping
Unit 1	**Unit 1: (10 hours)** **Listening: Advanced Listening I** Listening for descriptions of people; listening for opinions; listening to people making, accepting, and declining requests; listening to messages and a podcast. **Speaking – Advanced Speaking I** Describing personalities; expressing likes and dislikes; agreeing and disagreeing; complaining; talking about possible careers; deciding between two jobs, Making direct and indirect requests; accepting and declining requests, Narrating a story **Writing / Reading – Advanced Reading/ Writing I** Writing a description of a good friend, Reading about unusual social networking sites, Writing about two career choices, Reading about different types of workplaces, Writing a message with requests, Writing a personal account, Reading about the reliability of online content topics **Grammar – Advanced English Grammar I** Relative pronouns as subjects and objects; it clauses + adverbial clauses with when; Gerund phrases as subjects and objects; comparisons with adjectives, nouns, verbs, and past participles, Requests with modals, if clauses, and gerunds; indirect requests, Past continuous vs. simple past; past perfect;	CO1 CO1 CO1 CO2
Unit 2	**Unit 2: (10 hours)** **Advanced Communication II** **Listening – ADVANCED LISTENING II**	CO1

	Listening for information about living abroad; listening to opinions about customs, Listening to complaints; listening to people exchange things in a store; listening to a conversation about a "throwaway culture," Listening to environmental problems; listening for solutions, Listening to a conversation with a guidance counselor; listening for additional information **Speaking – ADVANCED SPEAKING II** Talking about moving abroad; expressing emotions; describing cultural expectations; giving advice; describing problems; making complaints; explaining something that needs to be done; identifying and describing problems; coming up with solutions; asking about preferences; discussing different skills to be learned **Writing/ Reading – ADVANCED READING/ WRITING II** Writing a pamphlet for tourists, Reading about moving to another country, Writing a critical online review, Reading about a problem with a ride-sharing service, Writing a post on a community website, Reading about a creative solution to lionfish on St. Lucia, Writing about a skill, Reading about different studying styles **Grammar - ADVANCED GRAMMAR II** Noun phrases containing relative clauses; expectations: *the custom to*, (*not*) *supposed to*, *expected to*, (*not*) *acceptable to; d*escribing problems with past participles as adjectives and with nouns; describing problems with *need* + gerund, *need* + passive infinitive, and *keep* + gerund, Passive in the present continuous and present perfect; prepositions of cause; infinitive clauses and phrases, *Would rather* and *would prefer*; *by* + gerund to describe how to do things	CO1 CO4 CO2
Unit 3	**Unit 3: (10 hours)** **Listening – ADVANCED LISTENING III** Listening to New Year's resolutions, Listening for dates and time periods; listening to predictions, Listening to descriptions of important events; listening to regrets and explanations, Listening for features and slogans **Speaking – ADVANCED SPEAKING II** Talking about moving abroad; expressing emotions; describing cultural expectations; giving advice; describing problems; making complaints; explaining something that needs to be done; identifying and describing problems; coming up with solutions; asking about preferences; discussing different skills to be learned. **Writing / Reading – ADVANCED READING/ WRITING III** Writing a message of advice, Reading about young scientist Jack Andraka, Writing a biography, Reading about futurists and their predictions for the year 2050, Writing a message of apology, Reading about a conflict with a friend and advice on how to fix it, Writing a TV or web commercial, Reading about what makes some advertisements memorable, **Grammar – ADVANCED GRAMMAR III** Get or have something done; making suggestions with modals + verbs, gerunds, negative questions, and infinitives; referring to time in the past with adverbs and prepositions: *during*, *in*, *ago*, *from…to*, *for*, *since*; predicting the future with *will*, future continuous, and future perfect, Time clauses: *before*, *after*, *once*, *the moment*, *as soon as*, *until*, *by the time*; expressing regret with *should* (*not*) *have* + past participle; describing	CO1 CO2 CO3 CO2

	hypothetical situations with *if* clauses + past perfect and *would*/*could have* + past participle	
Unit 4	**Unit 4: (10 hours)** **Listening – ADVANCED LISTENING IV** Listening to explanations; listening for the best solution, Listening for parts of a movie, Listening for solutions to everyday annoyances; listening to issues and Opinions, Listening to past obstacles and how they were overcome, listening for people's goals for the future **Speaking – ADVANCED SPEAKING IV** Drawing conclusions, offering explanations; describing hypothetical events; giving advice for complicated situations, Describing how something is done or made; describing careers in film, TV, publishing, gaming, and music, Giving opinions for and against controversial topics; offering a different opinion; agreeing and disagreeing, Giving opinions about inspirational sayings; talking about the past and the future. **Writing/ Reading – ADVANCED READING/ WRITING II** Writing a pamphlet for tourists, Reading about moving to another country, Writing a critical online review, Reading about a problem with a ride-sharing service, Writing a post on a community website, Reading about a creative solution to Lion fish on St. Lucia, Writing about a skill, Reading about different studying styles **Grammar - ADVANCED GRAMMAR IV** Past modals for degrees of certainty: *must (not) have*, *may (not) have*, *might (not) have*, *could (not) have*; past modals for judgments and suggestions: *should (not) have*, *could (not) have*, *would (not) have,* The passive to describe process with *is*/*are* + past participle and modal + *be* + past participle; defining and non-defining relative clauses, Giving recommendations and opinions with passive modals: *should be*, *ought to be*, *must be*, *has to be*, *has got to be*; tag questions for opinions, Accomplishments with the simple past and present perfect; goals with the future perfect and *would like to have* + past participle	CO3 CO4 CO3 CO2

Course Code	**CST201**						
Course Title	**Object Oriented Programming**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Describe the procedural and object-oriented paradigm with concepts of streams, classes, functions, data and objects. CO2: Understand dynamic memory management techniques using pointers, constructors, destructors, etc. CO3: Describe the concept of function overloading, operator overloading, virtual functions and polymorphism. CO4: Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming. CO5: Demonstrate the use of various OOPs concepts and file handling with the help of programs.						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (14hours)** • **Object-Oriented Programming Concepts** Introduction, comparison between procedural programming paradigm and object-oriented programming paradigm, Basic concepts of object-oriented programming — concepts of an object and a class, interface and implementation of a class, abstraction, encapsulation, data hiding, inheritance, overloading and polymorphism. • **Arrays, Pointers and Functions** Array declaration, character array, multidimensional array, Declaring and initializing pointers, accessing data through pointers, arrays and pointers, types of pointers- generic, void and function, Pointers to pointers. Defining a function, Actual and Formal Arguments, Local and global variables, Nested functions, Recursive functions, Inline functions. **Practical:** ● Introduction to basic structure of C++ program, utility of header and library files. ● Implementation of programs related to the basic constructs in C++ ● Programs using different data types in C++ ● Programs using Loops and Conditional Statements in C++ ● Programs using Manipulators in C++						**CO1**

	● Programs using arrays in C++. ● Programs to illustrate the usage of pointers in C++ ● Programs to illustrate the types of functions in C++ ● Program to differentiate the usage of call by value method and call by reference method. ● Programs related to string handling in C++	
	Unit 2: (16hours) • **Classes and Objects** Specifying a class, creating class objects, accessing class members, access specifiers, static members, nested classes, local classes, abstract classes. • **Constructors and Destructors:** copy constructor, dynamic constructors, and explicit constructors. • **Operator Overloading and Type Conversion** Overloading operators, rules for overloading operators, Overloading of various operators, Type conversion. **Practical:** ● Programs to illustrate the concept of function and operator overloading ● Program to demonstrate the objects of the class and their working ● Programs to implement the working of constructor & destructor ● Program to implement the concept of function overriding.	**CO2**
	Unit 3: (16hours) • **Inheritance** Introduction, defining derived classes, Types of inheritance, virtual base class, pure virtual functions, Friend functions, overriding member functions. • **Polymorphism** Concept of binding - early binding and late binding, Virtual functions, abstract classes, Virtual destructors. • **Standard Input/output Operations** Concept of streams, hierarchy of console stream classes, Input/output using overloaded operators >> and << of I/O stream classes, formatting output, Manipulators. **Practical:** ● Programs to implement Inheritance and its types ● Programs using early and late binding ● Programs to show the working of abstract classes	**CO3**
	Unit 4: (14hours) • **Working with Files** File streams, hierarchy of file stream classes, Error handling during file operations, Reading/writing of files, updating files. • **Exception Handling**	**CO4**

	Review of traditional error handling, basics of exception handling, Exception handling mechanism, throwing mechanism, catching mechanism. • **Standard Template Library** Overview of Standard Template Library, Containers, Iterators, Other STL Elements, Vectors. **Practical:** ● Programs to show the working of Exception Handling ● Program to illustrate the concept of File handling ● At least one example of large program development.

Course Code	**CST203**						
Course Title	**Computer Organization**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Explain the organization of basic computer, its design and the design of ALU, control unit. CO2: Demonstrate the working of central processing unit and RISC and CISC Architecture. CO3: Describe the operations and language of the register transfer, micro operations and input- output organization. CO4: Understand the organization of memory and memory management hardware. CO5: Elaborate advanced concepts of computer architecture, Parallel Processing, pipelining, inter-processor communication and synchronization.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**-**	**50**	**-**	**5**
Examination Mode	Theory						
Syllabus	**UNIT-1(12Hours)** Introduction Basic organization of computers, Block level description of the functional units as related to the execution of a program; Fetch, decode and execute cycle. Register Transfer and Micro operations Register transfer language, Inter-Register Transfer, Arithmetic Micro-operations, Logic and Shift micro-operations Language, Control functions. Arithmetic Logic Unit: Arithmetic, logic and shift micro operations. Constructing an arithmetic logic shift unit.						**CO1**
	UNIT-2(12Hours) Basic Computer Architecture and Design Computer registers, Computer Instructions-Instruction Set Completeness. Classifying Instruction Set Architecture. Basic steps of Instruction Execution. Hardwired Control. Micro programmed Control. Horizontal and Vertical Microprogramming. Interrupts. Central Processing Unit General Register Organization. Stack Organized CPU. Instruction Formats, Addressing Modes. Data Transfer and Manipulation, RISCVs CISC.						**CO2**

	UNIT-3(11Hours) Pipelining Parallel and pipeline Processing, Pipeline Control, Pipeline Implementations, Conflicts Resolution, and Pipeline Hazards. Vector Processing, and Array Processors. Memory Organization Memory Systems: principle of locality, principles of memory hierarchy Caches, associative memory, main memory, Virtual memory, Paging and Segmentation, Memory Interleaving.	**CO3**
	UNIT-4(11Hours) Input Output Organization I/O performance measures, types and characteristics of I/O devices, I/O Modes-Programmed I/O, Interrupt Initiated I/O and DMA. Buses: connecting I/O devices to processor and memory, interfacing I/O devices to memory, processor, and operating system. Parallel Computers Classification, SIMD, MIMD Organizations, Instruction and Arithmetic Pipeline, Parallel Processing.	**CO4**

Course Code	**CST205**						
Course Title	**Data structures**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: Theory: CO1: Understand the concept of data structure, memory management, data types, Algorithms, Big O notation. CO2: Understand basic data structures such as arrays, linked lists, stacks and queues. CO3: Operations performed on linear and nonlinear data structures. CO4: Solve problem involving graphs, trees and heaps CO5: Apply Algorithm for solving problems like sorting, searching, insertion and deletion of data. Practical: CO1: Be able to design and analyse the time and space efficiency of the data structure CO2: Be capable to identity the appropriate data structure for given problem CO3: Have practical knowledge on the applications of data structure						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (15 hours)** ● **Introduction** Basic terminology: Elementary Data Organizations, Data Structure Operations: insertion, deletion, traversal etc.; Analysis of an Algorithm, Asymptotic Notations, Time-Space trade off Algorithms, Control Structure and Complexity of Algorithms. ● **Array** Representation of Linear array in memory, Traversing linear Array, Searching Techniques: Linear search, Binary Search, Complexity of linear search and binary search and their analysis and 2D-Array, Representation of 2D-Array in memory. Records, Record Structures. **Practical:** ● W.A.P and algorithm to check whether the number is greater or not. ● W.A.P and algorithm to print whether the given number is even or odd. ● W.A.P and algorithm to check whether the entered number is prime or not. ● W.A.P to perform various types of Arithmetic operations.						**CO1**

	● W.A.P to store the marks of a student in array and then print the result. ● W.A.P to traversing of linear array. ● W.A.P to implement Linear Search. ● W.A.P to implement Binary Search. ● W.A.P to generate the Fibonacci series using Array. ● W.A.P to find the transpose of matrix. ● W.A.P to addition, subtraction and multiplications of two matrix.	
	Unit 2: (15 hours) ● **Linked List** Representation of Linear Linked List, Traversing a linked list, Operations on linked list, Memory Allocation, Garbage collection, Overflow and Underflow. Doubly linked list, Operations on 2-way linked list, Advantages and disadvantages of 2-way linked list, Circular Linked List, Header Linked Lists, types of header linked list and Application of linked list. **Practical:** ● W.A. P to implement one-way linked list. ● W.A.P to implement various operations performed on one-way linked list. ● W.A. P to implement two- way linked list. ● W.A.P to implement various operations performed on two-way linked list.	**CO2**
	Unit 3: (17 hours) ● **Stacks and Queues** Array representation of stacks/Operation on Stack: Push and pop, Arithmetic Expressions; Polish Notation, Evaluation of a postfix expression, Transforming infix expression into postfix expressions. Quick Sort: An Application of Stack, Complexity of Quick Sort, Recursion: Factorial function, Fibonacci sequence and Towers of HANOI. Representation of Queue, Operations performed on Queues, Deques and Priority Queues. ● **Trees** Basic terminology, Binary Trees, Complete Binary Trees, Extended Binary Trees: 2-Trees, Representation of binary trees in memory. Traversing Binary Trees: Pre order, In order and Post order. Binary Search Trees, Searching& Inserting in Binary Search Tree, Deleting in a binary search tree. Heap, Heapsort,deleting the root of a Heap, General trees and Computer representation of General trees.AVL Tree; Applications of Binary Trees. B Tree, B+ Tree. **Practical:** W.A.P to demonstrate the operation performed on stack. W.A.P to implement TOWER of HANOI. W.A.P to implement PUSH and POP operations of stack. W.A.P to evaluation of a Postfix Expression.	**CO3**

	Unit 4: (13 hours) ● **Graph** Basic Terminology, Representation of Graph, Traversing of Graph: Breadth-First Search and Depth-First Search and Applications of Graphs etc. ● **Sorting and Hashing** Bubble Sort, Insertion Sort, Selection Sort, Merge Sort, Bucket Sort, Radix Sort, Hashing and Hash Function sets. **Practical:** ● W.A.P to implement Bubble Sort. ● W.A.P to implement Selection sort. ● W.A.P to insert and delete node from graph. ● W.A.P to implement Breadth First Search. ● W.A.P to implement Depth First Search.	**CO4**

Course Code	**CST207**						
Course Title	**Digital Electronics**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1:-Students will be able to represent numerical values in various number systems and perform number conversions between different number systems, various codes and operation of logic gates (AND, OR, NOT, NAND, NOR, XOR, XNOR) CO2:-Students will demonstrate the knowledge of: Boolean algebra including algebraic manipulation/simplification, and application of DeMorgan's theorems. Karnaugh map and Q-M reduction method. Able to analyse and design digital combinational circuits including arithmetic circuits (half adder, full adder), decoders, encoders, multiplexers, and de-multiplexers, code converters. CO3:- Students will Analyse the synchronous and asynchronous logic circuits such as flip flops, registers, and counters and able to understand/D and D/A converters. CO4:- Students will be able to understand various types of memories and logic families. CO5: To exihibit project planning Practical: CO1: Learn the basics of gates. CO2: Construct basic combinational circuits and verify their functionalities CO3: Apply the design procedures to design basic sequential circuits CO4: Learn about counters CO5: Learn about Shift registers CO6: To understand the basic digital circuits and to verify their operation							
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (13 hours)** Number System and Binary Code: Introduction, Binary, Octal, Hexadecimal Number system:-Conversions, Addition, Subtractions, Multiplication, Division, Weighted and Non-weighted codes, Signed - unsigned numbers, Binary Subtractions using 1's and 2's compliment, ASCII code, Excess 3 code, Grey code, BCD code and BCD additions & BCD						**CO1**

	Subtractions. Review of gates: - OR, AND, NOT, NOR, NAND, EXOR, EX-NOR, Universal gates. Minimization of logic function: Basic theorem of Boolean algebra, Sum of Products and Product of Sums, canonical form, Minimization using: - Boolean algebra and K-map.	
	Unit 2: (14 hours) Combinational Circuits: Introduction, Combinational circuit design, Encoders, decoders, Adders, Sub tractors and Code converters, Parity checker, seven segment display, Magnitude Comparators. Multiplexers, De-multiplexer, Implementation of Combinational circuit using Multiplexers and De-multiplexer.	**CO2**
	Unit 3: (15 hours) Sequential Circuits: Introduction, flip flops, Clocked flip flops, SR, JK, D, T and edge triggered Flip-flops, Conversions of Flip flops, Shift Registers, Type of Shift Registers, Serial to parallel converter, parallel to serial converter Ring Counter, Twisted Ring Counter, ripple (Asynchronous) counters, synchronous counters, counters design using flip flops D/A and A/D Converters: Introduction, Weighted register D/A converter, binary ladder D/A Converter, A/D converter:- Parallel Comparator, Counter type, Continuous, Successive approximation, Single and dual slope A/D converter, A/D accuracy and resolution. Logic Families: RTL, DCTL, DTL, TTL, ECL, CMOS and its various types, Comparison of logic families.	**CO3**
	Unit 4: (18 hours) ● Verification of the truth tables of TTL gates, e.g., 7400, 7402, 7404, 7408, 7432, 7486. ● Verify the NAND and NOR gates as universal logic gates. ● Verification of the truth table of the Multiplexer 74150. ● Verification of the truth table of the De-Multiplexer 74154. ● Design and verification of the truth tables of Half and Full adder circuits.	**CO4**

	• Design and verification of the truth tables of Half and Full subtractor circuits. • Design and test of an S-R flip-flop using NOR/NAND gates. a) Verify the truth table of a J-K flip-flop (7476) b) Verify the truth table of a D flip-flop (7474) • Operate the counters 7490, 7493 and 74194. Verify the frequency division at each stage and with a low frequency clock (say 1 Hz) display the count on LEDs.

Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Gain an understanding of rural life, culture and social realities CO2: Develop a sense of empathy and bonds of mutuality with local community CO3: Appreciate significant contributions of local communities to Indian society and economy CO4: Learn to value the local knowledge and wisdom of the community CO5: Identify opportunities for contributing to community's socio-economic improvements						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**-**	**-**	**20**	**35**	**30**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (15hours)** ● **Appreciation of Rural Society:** Rural life style, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of "soul of India lies in villages' (Gandhi), rural infrastructure. ● **Teaching Methodology:** Classroom Discussions ● **Assignment:** Prepare a map (physical, visual or digital) of the village you visited and write an essay about inter-family relations in that village. ● **Mode of Assignment Submission:** Written Assignment **Practical:** ● Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities. ● Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site. ● Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures. ● Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan (GPDP).						**CO1**
	Unit 2: (15hours) ● **Understanding rural economy & livelihood:**						**CO2**

	Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets ● **Teaching Methodology:** Group Discussions in Class ● **Assignment:** Describe your analysis of rural household economy, its challenges and possible pathways to address them. ● **Mode of Assignment Submission:** Written Assignment **Practical:** ● Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization. ● Visit Rural Schools / mid-day meal centres, study Academic and infrastructural resources and gaps. ● Participate in Gram Sabha meetings, and study community participation. ● Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries. ● Attend Parent Teacher Association meetings, and interview school drop outs Fostering Social Responsibility & Community Engagement in Higher Education Institutions in India.	
	Unit 3: (15hours) ● **Rural Institutions:** Traditional rural organisations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration. ● **Teaching Methodology:** Classroom Discussions ● **Assignment:** How effectively are Panchayati raj institutions functioning in the village? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). ● **Mode of Assignment Submission:** Group presentations of Assignment **Practical:** ● Visit local Anganwadi Centre and observe the services being provided ● Visit local NGOs, civil society organisations and interact with their staff and beneficiaries, ● Organize awareness programmes, health camps, Disability camps and cleanliness camps	**CO3**

	● Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys ● Raise understanding of people's impacts of climate change, building up community's disaster preparedness	
	Unit 4: (15hours) ● **Rural Developmental Programmes:** History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM AwaasYojana, Skill India, Gram panchayat Decentralised Planning, NRLM, MNREGA, etc. ● **Teaching Methodology:** Classroom Discussions **Practical:** ● Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants. ● Formation of committees for common property resource management, village pond maintenance and fishing.	**CO4**

Course Code	**CST202**						
Course Title	**System Programming**						
Course Outcomes	Theory: After the completion of this course the participants would gain the knowledge of: CO1: To study about system programming and various types of system software. CO2: Explanations of each phase of compiler CO3: To study about assembler and components of assembly language. CO4: To study about operating system concepts, Loaders and Editors. Practical: After completion of this course, a student will be able to: CO1: Understand the basic concept of compiler design CO2: To know the working of the assembler CO3: Design and implement system utility programs CO4: Develop skills to write program using system services						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**-**	**25**	**-**	**25**	**35**	**5**
Examination Mode	Theory + Practical						

Syllabus	**Unit 1: (15hours)** **Introduction to System Programming:** Definition of System Programming, Features of System Programming, System Programming v/s Application Programming, Compilation Process and Types of System software. **Assemblers:** Elements of Assembly Language Programming, Format of assembly language statement, set of instructions, Machine instruction format, Types of assembly language: Imperative statements, Declaratives statements and Assembler directives with their types. Phases of Assembler: Analysis phase and Synthesis phase. Single pass assembler, two pass assembler with their databases. Design procedure for an Assembler.	**CO1**
	Unit 2: (15hours) Macros and Macro Processors: Macro Instructions, Macro Processor, Syntax for Macro call and features of a Macro facility. Pass 1 of Macro processor and Pass 2 of Macro processor and their Implementations. Compilers: Aspects of Compilation, Complier v/s Interpreter. Phases of compilation, Scanning and Parsing, Compilation of Expressions, Compilation of Control Structures Code Generation and Code Optimization Techniques, Compiler Writing Tools (Case study on LEX and YACC)	**CO2**
	Unit 3: (15hours) Loaders & Linkage Editors: Loading, Linking and Relocation, Types of loaders, Detailed Linking and Loading process in memory.	**CO3**
	Unit 4: (15hours) Editors and debuggers: Introduction to Editors, Types of Editors, Structure of an Editor, Debug monitors, Introduction to various debugging techniques, Turbo C++ Debuggers. Grammar and automation: Introduction to grammar, types of grammar, acceptability of grammar, introduction to automation, characteristics of automation, finite control, transition system, finite automation.	**CO4**
	List of Experiments 1. Design and Implementation of an Editor in any language. 2. Design and Implementation of Pass1 of Two Pass Assembler in any language. 3. Design and Implementation of Pass2 of Two Pass Assembler in any language. 4. Design and Implementation of One Pass Assembler in any language. 5. Design and implementation of Symbol Table(create, insert, delete, search, modify functions) 6. Implementation of Lexical Analyzer. 7. Implementation of Parser in any language. 8. Design and Implementation of Two Pass Macro- Processor. 9. Programming using LEX and YACC.	

	10. Design and Implementation of a Loader.

Course Title	**Data Communication and Networking**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Understand the basics of data communication, networking, signals and Network Categories CO2: To study about data models and usage of transmission media. CO3: Error correction and detection techniques and analyse the services provided by protocols and features of various protocols in data networks. CO4: To know about various routing algorithms used in network layer. CO5: Recognize and use of various types of protocols used in transport layer and application layer						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (18 hours)** ● **Introduction** Data Communication: Components, Data Flow; Network Categories: LAN, MAN, WAN (Wireless / Wired); Network Software: Concept of layers, protocols, interfaces and services; Reference ● Model: OSI, TCP/IP and their comparison. ● **Physical Layer** Concept of Analog & Digital Signal; Bit rate, Bit Length; Transmission Impairments: Attenuation, Distortion, Noise; Data rate limits: Nyquist formula, Shannon Formula; Multiplexing: Frequency Division, Time Division, Wavelength Division; Transmission media: Twisted pair, coaxial cable, fiber optics, wireless transmission (radio, microwave, infrared);Circuit Switching & Packet Switching.						**CO1**

	Practical: ● Making Straight, Rollover and Cross-Over cables ● Cable & RJ-45 Jack outlet installation ● Basic LAN Setup and IP Addressing ● Write a program for error detecting cod	
	Unit 2: (14 hours) ● **Data Link Layer** Error correction & Detection; Flow & Error Control; Sliding window protocols: Stop & Wait ARQ, Go back n ARQ, Selective repeat ARQ; Examples of DLL Protocols-HDLC, PPP; Medium Access Sub layer: Channel Allocation; Random Access: ALOHA, CSMA protocols; Controlled Access: Polling, Reservation, Token Passing. **Practical:** ● Write a program for Hamming Code generation for error detection and correction ● Write a program for congestion control using Leaky bucket algorithm. ● Study of Amplitude Modulation	**CO2**
	Unit 3: (15 hours) ● **Network Layer:** Routing algorithms- Distance vector, Link State Routing, Hierarchical Routing, Broadcast & Multicast Routing; Congestion Control: Principles of Congestion Control, Congestion Prevention policies, Leaky bucket &Token bucket algorithms**.** **Practical:** ● Study of Frequency Modulation ● Study of ASK Modulation ● Study of FSK Modulation	**CO3**
	Unit 4: (13 hours) ● **Transport Layer:** Addressing, flow control & buffering, multiplexing & de-multiplexing, crash recovery; Example transport protocols: TCP, SCTP and UDP. ● **Application Layer:** Network Security; Domain Name System; Simple Network Management Protocol; Electronic Mail. **Practical:** ● Study of ASK Modulation ● Study of FSK Modulation ● Implementation of STOP and Wait protocol ● Implementation of Sliding Window protocol	**CO4**

Course Code	**CST206**						
Course Title	**Operating System Concepts**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Understand Functions, Services and structure of Operating Systems. CO2: Understand processes, schedulers and explanation of CPU scheduling. CO3: Understand issues related to Process Synchronization and focus on principles of Deadlock and related problems. CO4: Comprehend the mechanisms used in Memory Management and Virtual Memory. CO5: Understand the concepts of File System, secondary storage management and Disk Scheduling Practical: CO1: Analyse process management and simulate CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority, Deadlock management. CO2: Implement memory management schemes and page replacement schemes. CO3: Implement file allocation methods and disk scheduling algorithms. CO4: Experiment with UNIX commands and shell programming						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (15 hours)** ● **Introduction:** What is an O.S., O.S. Functions; Different types of O.S.: batch, multi-programmed, time sharing, real-time, distributed, parallel; General structure of operating system, O/S services, system calls. ● **Process Management:** Introduction to processes - Concept of processes, process scheduling, Process control block, operations on processes; Inter process communication, Critical sections, Semaphores, Message passing; CPU scheduling- scheduling criteria, preemptive & non-preemptive scheduling, Scheduling algorithms (FCFS, SJF, RR and priority). Multiprocessor scheduling: Real Time scheduling: RM and EDF. **Practical:** ● Simulation of the CPU scheduling algorithms a) Round Robin b)SJF c)FCFS						**CO1**

	d)Priority ● Simulation of MUTEX and SEMAPHORES. ● Simulation of Bankers Deadlock Avoidance and Prevention algorith	
	Unit 2: (15 hours) ● **Inter-process Communication:** Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Strict Alternation, Peterson's Solution, The Producer-Consumer Problem, Semaphores, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dinning Philosopher Problem etc. ● **Memory Management:** Background, logical vs. physical address space, swapping; contiguous memory allocation, internal & external fragmentation, memory-compaction, paging, segmentation, Virtual Memory, demand paging, page replacement, page replacement algorithms (FIFO, Optimal, LRU); Thrashing. **Practical:** ● Simulation of Page Replacement Algorithms a)FIFO b)LRU c)LFU ● Simulation of paging techniques of memory management.	**CO2**
	Unit 3: (15 hours) ● **File Systems:** Files - file concept, file structure, file types, access methods, File attributes, file operations; directory structure, allocation methods (contiguous, linked, indexed), free-space management (bit vector, linked list, grouping), Protection mechanisms. ● **Secondary Storage:** Disk Structure, Disk Scheduling (FCFS, SSTF, SCAN, C-SCAN, and LOOK). **Practical:** ● Simulation of file allocation Strategies a)Sequential b)Indexed c)Linked ● Simulation of file organization techniques Single Level Directory; Two Level ; Hierarchical ; DAG	**CO3**
	Unit 4: (15 hours) ● **Deadlocks:** Introduction to deadlocks, Conditions for deadlock, Resource allocation graphs, Deadlock Detection and Recovery, Deadlock Avoidance, Deadlock Prevention. ● **Case Studies:** Brief introduction of MS-DOS, Windows (9x, XP, 2000), UNIX and LINUX **Practical:** ● To automate the allocation of IP addresses i.e. to set and configure the DHCP server and DHCP client. ● Basic Introduction to Linux Operating System and Shell scripting.	**CO4**

Course Code	**CST208**						
Course Title	**Database Management System**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Model Entity-Relationship diagrams for enterprise level databases CO2: Formulate Queries using SQL and Relational Formal Query Languages CO3: Apply different normal forms to design the Database CO4: Summarize concurrency control protocols and recovery algorithms Practical: CO1. Understand practical knowledge on designing and creating relational database systems using SQL. CO2. Formulate queries using SQL DML/DDL commands. CO3. Formulate queries using different Logical and SQL operators. CO4. Understand the various queries execution such as Aggregating, character, number functions, and group functions, constraints, set operations joins, views and data type conversion. CO5. Understand the concept of Sub queries, Nested Queries and saving of data using Rollback, Commit.						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (16 hours)** ● **Introduction to Database Systems:** Introduction to Database Systems: Introduction and applications of DBMS, Purpose of database, Data Independence, Database System architecture- levels, Mappings, Database users and DBA, File Systems Versus a DBMS, Advantages of a DBMS, DBMS Layers, Data independence. ● **Relational query languages:** Relational algebra, Tuple and domain relational calculus. **Practical:** ● Introduction to SQL and its Data Types. ● Write the queries for Data Definition and Data Manipulation language. ● Write SQL queries using Logical operators (=, <,>, etc.). ● Write SQL queries using SQL operators (Between, AND, IN (List), Like, ISNULL and also with negating expressions).						**CO1**
	Unit 2: (14 hours) **Data Models:** Data Models Relational Model, Network Model, Hierarchical Model, ER Model: Entities, Attributes and Entity						**CO2**

	Sets, Relationships and Relationship Sets, Constraints, Weak Entities, Comparison of Models, Database Design with the ER Model, Keys. **Practical:** ● Write SQL query using character, number and group functions. ● Write SQL queries for Relational Algebra (UNION, INTERSECT, and MINUS, etc.). ● Write SQL queries for extracting data from more than one table (Equi-Join, Non-Equi- Join , Outer Join)	
	Unit 3: (16 hours) **Database Design:** ● Normalization and Normal Forms, Various dependencies in database (i.e. Functional dependencies, Multi-valued Dependency, Join Dependency, etc.) First, Second and Third Normal Forms, BCNF, Fourth and Fifth Normal Forms, Armstrong's axioms, Dependency preservation, Lossless design. ● **Transaction Management:** ACID Properties, Serializibility, Two-phase Commit Protocol, Concurrency Control, Lock Management, Lost Update Problem, Inconsistent Read Problem , Read-Write Locks, Deadlocks Handling, 2PL protocol and Introduction to Database Recovery and its techniques. **Practical:** ● Write SQL queries for sub queries, nested queries(using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET) ● Concepts for ROLL BACK, COMMIT & CHECK POINTS. ● Creation, altering and dropping of tables and inserting rows into a table (use constraints while creating tables) examples using SELECT command.	**CO3**
	Unit 4: (14 hours) **Database Protection:** Database Threats, Access Control Mechanisms, Grant and Revoke, Firewalls, Encryption and and Digital Signatures, Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection. **Practical:** ● Queries (along with sub Queries) Constraints. Example: - Select the roll number and name of the student who secured fourth rank in the class. ● Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING clauses. ● Queries using Conversion functions (to_char, to_number and to_date), string functions (Concatenation, lpad, rpad, ltrim, rtrim, lower, upper, initcap, length, and substr), date functions (Sysdate, next_day, add_months, last_day, months_between, least, greatest, trunc, round, to_char, to_date)	**CO4**

	● Create Views, Cursors, And Triggers and Stored Procedures in PL/SQL.

Course Code	**MAT252**							
Course Title	**Engineering Mathematics-III**							
Course Outcomes	On the completion of the course the student will be able to CO1: To understand the details of Fourier series and Fourier Transformation. CO2: To understand the Laplace transforms and its applications CO3: To understand the partial differential equations, types of partial differentials differential equation and Applications of Partial differential equation. CO4: To understand the Analytic Function and Complex Integration							
Examination Mode	Theory							
Assessment Tools					**MSE**	**MSP**	**ESE**	**ESP**
	Quiz	**Assignment**	**Attendance**	**Lab Performance**				
Weightage	**10**	**10**	**5**	**-**	**25**	**-**	**50**	**-**
Syllabus								**CO Mapping**
Unit 1	**Fourier series:**							
●	Periodic functions, Euler's formula. Dirichlet's conditions.							CO1
●	Fourier series of discontinuous functions.							CO1
●	Fourier series of Even and Odd functions, half range expansions, Fourier series of different wave forms, Complex form of Fourier series							CO1
●	Fourier Transformation							CO1
Unit 2	**Laplace Transforms:**							
●	Laplace transforms of various standard functions							CO2
●	, Linear property of Laplace transforms, Shifting property and change of scale,							CO2
●	inverse Laplace transforms, transform of derivatives and integrals, Laplace transform of unit step function, impulse function, periodic functions,							CO2
●	Applications to solution of ordinary linear differential equations with constant coefficients, and simultaneous differential equations.							CO2
Unit 3	**Partial Differential Equations:**							
●	Formulation of partial differential equations, Linear partial differential equations, homogeneous partial differential equations with constant coefficients.							CO3
●	Wave equation and Heat conduction equation in one dimension							CO3
●	Two dimensional Laplace equation and their applications							CO3
●	Solution by the method of separation of variables.							CO3
Unit 4	**Analytic Function and Complex Integration:**							

●	Limits, continuity and derivative of the function of complex variable,	CO4
●	Analytic function, Cauchy-Riemann equations, conjugate functions, harmonic functions;	CO4
●	Line integrals in the complex plane, Cauchy's theorem, Cauchy's integral formula and derivatives of analytic function.	CO4
●	Taylor's and Laurent's expansions (without proofs), singular points, poles, residue,	CO4
●	Integration of function of complex variables using the method of residues.	CO4

Course Code	**CST301**						
Course Title	**Cryptography and Network Security**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills CO1: Identify the security issues in the network and resolve it. CO2: Analyse the vulnerabilities in any computing system and hence be able to design a security solution. CO3: Evaluate security mechanisms using rigorous approaches by key ciphers and Hash functions. CO4: Demonstrate various network security applications, IPSec, Firewall, IDS, Web Security, Email Security and Malicious software etc.,						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (**15Hours**)** • Overview of computer networks • Seven-layer architecture, TCP/IP suite of protocols. • Introduction to information Security, Types of information security controls, need of Information Security, Allocation of information security responsibilities • Security mechanisms, Identification of Security threats and their effects on security, Technologies and Security policies, real time Communication security • An introduction to LAN/WAN Security and internet Security, Security Management for the World Wide Web and Internet firewalls and how to get past the firewall, Steganography, Layers and Cryptography. **Practical:** • Implementation of symmetric techniques (Ceaser cipher, mono alphabetic, polyalphabetic, hill- Cipher, vigenere cipher) • Implementation of transposition techniques (Rail-fence, transposition of columns)						**CO1**
	Unit 2: (15 Hours**)** • Overview of Authentication schemes • Password and address based Authentication, Cryptographic Authentication protocols, Trusted Intermediaries and session key establishment						**CO2**

	• Authentication of people: Passwords, Online and offline password guessing, eavesdropping, password and careless users, authentication tokens and biometrics. **Practical:** • Implantation of Block Cipher techniques (Play fair cipher, Data Encryption Standard) • Implementation of algorithm used for Random Number Generation (Blum blum shub) • Implementation of algorithm used for calculating GCD (Euclidean algorithm).	
	Unit 3: (13 Hours**)** • Security handshake pitfalls • Mutual authentication, Integrity for data, Mediated Authentication, Strong password protocols: EKE, SRP, SPEKE and PDM • Public key infrastructure (PKI): Terminology, PKI trust models, Revocation and Authorization futures. • IPsec: Overview of IPsec, IP and IPv6, AH and ESP, IKE, SSL/TLS. **Practical:** • Implementation of algorithm used for calculating multiplicative inverse (Extended-Euclidean) • Implementation of algorithm used for testing for Primarily (Chinese Remainder Theorem) • Implementation of RSA Algorithm.	**CO3**
	Unit 4: (17 hours) • Overview of IT Security, Hacking, Hackers and Types of Hackers, Attacks, Denial of Service Attacks(DoS), types of DOS attacks, Viruses and their characteristics, impact they can have on operations and business, Detection and Prevention Mechanisms, types of virus, The self-Hack Audit, VPN. • Intrusion: Intruders, Audit records, Intrusion detection, distributed intrusion detection, honeypots • Electronic Mail Security: PEM, Structure of PEM Message and S/MIME, PGP etc. **Practical:** • Elliptic Curve Cryptography. • Hash Algorithms: MD5 Message Digest Algorithm, Authentication Protocols. • System Security: Firewalls: Firewall Design Principles	**CO4**

Course Title	**Data Mining & Warehousing**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills CO1: Identify the scope and necessity of Data Mining & Warehousing for the society CO 2: Describe the designing of Data Warehousing so that it can be able to solve the root problems. CO3: To understand various tools of Data Mining and their techniques to solve the real time problems. . CO4: To develop ability to design various algorithms based on data mining tools. CO5: To develop further interest in research and design of new Data Mining techniques. Practical: CO1: The data mining process and important issues around data cleaning, pre-processing and integration. CO2: The principle algorithms and techniques used in data mining, such as clustering, association mining, classification and prediction. **Students are required to perform practical in Oracle/MS SQL Server and STATISTICA Data Miner						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (15 hours)** • **Introduction:** Data Mining Concepts, Input, Instances, Attributes and Output, Knowledge Representation & Review of Graph Theory, Lattices, Probability & Statistics • **Machine learning concepts and approaches:** Supervised Learning Framework, concepts & hypothesis, Training & Learning, Boolean functions and formulae, Monomials, Disjunctive Normal Form & Conjunctive Normal Form, A learning algorithm for monomials **Practical:** • Building a Database Design using ER Modelling and Normalization Techniques • Implementation of functions, Procedures, Triggers and Cursors						**CO1**

	Unit 2: (16 hours) • **Data Preparation:** Data Cleaning, Data Integration & Transformation, Data Reduction • **Mining Association Rules:** Associations, Maximal Frequent & Closed Frequent item sets, Covering Algorithms & Association Rules, Linear Models & Instance-Based Learning, Mining Association Rules from Transactional databases, Mining Association Rules from Relational databases & Warehouses, Correlation analysis & Constraint-based Association Mining **Practical:** ● Load Data from heterogeneous sources including text files into a predefined warehouse schema. ● Feature Selection and Variable Filtering (for very large data sets)	**CO2**
	Unit 3: (14 hours) • **Classification and Prediction:** Issues regarding Classification & Prediction, Classification by Decision Tree induction, Bayesian classification, Classification by Back Propagation, k-Nearest Neighbour Classifiers, Genetic algorithms, Rough Set & Fuzzy Set approaches **Practical:** ● Association mining in large data sets ● Interactive Drill-Down, Roll up, Slice and Dice operations	**CO3**
	Unit 4: (15 hours) • Mining Complex Types of Data: Multidimensional analysis & Descriptive mining of Complex data objects, Mining Spatial Databases, Mining Multimedia Databases, Mining Time-series & Sequence data, Mining Text databases, Mining World -Wide Web • Data Mining Applications and Trends in Data Mining: Massive Datasets/Text mining, Agent-Based Mining **Practical:** ● Generalized EM & k-Means Cluster Analysis ● General Classification	**CO4**
Reference Books:	**1.** M.H.Dunham, Data Mining: Introductory and Advanced Topics, Pearson Education **2.** Jiawei Han, MichelineKamber, Data Mining Concepts & Techniques, Elsevier **3.** C. M. Course Code	**CST305**						
Course Title	**Software Engineering**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills CO1: Plan a software engineering process life cycle, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements CO2: Able to elicit, analyse and specify software requirements through a productive working relationship with various stakeholders of the project CO3: Analyse and translate a specification into a design, and then realize that design practically, using an appropriate software engineering methodology. CO4: Know how to develop the code from the design and effectively apply relevant standards and perform testing, and quality management and practice CO5: Know how to manage the risks, ensures quality management and able to manage modern engineering tools.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**		**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (11hours)** • Introduction to Software Engineering: Software Problem, Software Engineering, Approach, Software process, Characteristics of Software Engineering Process, Software Applications, Software Crisis: Problem and Causes • Software Development Life Cycle: The waterfall model, Incremental process models, Evolutionary process models, Spiral Model. • Requirements engineering process: Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management						**CO1**
	Unit 2: (12hours) • **Software Requirements:** Functional and non-functional requirements, User requirements, System requirements, Interface specification, documenting Software Requirement Specification (SRS). • **Software Project Planning:** Cost estimation, cost estimation models, Project scheduling, Software Configuration management, Team Structure, Risk Management. • **System models:** Context Models, Behavioural models, Data models, Object models, structured methods						**CO2**

	• **Design Engineering:** Design Concepts, design models for architecture, component, data and user interfaces; Problem Partitioning, Abstraction, Cohesiveness, Coupling, Top Down and Bottom Up design approaches; Functional Versus Object Oriented Approach, Design Specification, 4GL	
	Unit 3: (12hours) • Creating an architectural design: Software architecture, Data design, Architectural styles and patterns, Architectural Design • Object-Oriented Design: Objects and object classes, An Object-Oriented design process, Design evolution. • Performing User interface design: Golden rules, User interface analysis and design, interface analysis, interface design steps, Design evaluation • Coding and Testing Strategies: Code reviews, A strategic approach to software testing, test strategies for conventional software, Black-Box and White-Box testing, Validation testing, System testing, the art of Debugging • Product metrics: Software Quality, Metrics for Analysis Model, Metrics for Design Model, Metrics for source code, Metrics for testing, Metrics for maintenance. • Metrics for Process and Products: Software Measurement, Metrics for software quality	**CO3**
	Unit 4: (11hours) • Risk Management: Reactive vs. Proactive Risk strategies, software risks, Risk identification, Risk projection and risk refinement • Quality Management: Quality concepts, Software quality assurance, Software Reviews, Formal technical reviews, Statistical Software quality Assurance, Software reliability, The ISO 9000 quality standards • CASE Tools: Types of CASE tools, advantages and components of CASE tools, Unified Modelling Language (UML)	**CO4**

Course Code	**CST307**						
Course Title	**Algorithm Design & Analysis**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills CO1: Describe the basic concepts of the algorithms and analyse the worst-case running times of algorithms using asymptotic analysis. CO2: Use divide-and-conquer techniques for solving suitable problems. CO3: Describe the greedy paradigm and explain when an algorithmic design situation calls for it. CO4: Apply dynamic programming and backtracking approaches to solve suitable problems. CO5: Able to Explain the major graph algorithms and Employ graphs to model engineering problems, when appropriate. Able to describe the classes P, NP, and NP-Complete. Practical: CO1: Identify the problem given and design the algorithm using various algorithm design techniques. CO2: Implement various algorithms in a high level language. CO3: Analyse the performance of various algorithms. CO4: Compare the performance of different algorithms for same problem.						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**-**	**25**	**-**	**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (16 hours)** • **Introduction:** Concept of Algorithm, Role of Algorithms in Computing, Algorithm Specification, Performance Analysis (Time and space complexities), and Growth of functions: Asymptotic Notation, Standard notation & common functions; Introduction to Recurrences: substitution method, recursion-tree method, master method, Brute-Force, Branch and Bound, Randomizing Algorithms, Depth First Search (DFS) and Breadth First Search (BFS), Topological sorting. Divide and Conquer, General Method, Binary Search, Merge sort, Quick sort, Selection sort. **Practical:** ● Code and analyse to compute the greatest common divisor (GCD) of two numbers. ● Code and analyse to find the median element in an array of integers. ● Code and analyse to find the majority element in an array of integers.						**CO1**

	Unit 2: (16 hours) • **Greedy Algorithms:** Elements of Greedy strategy, Activity Selection Problem, Knapsack problem, Minimum Cost Spanning Trees (Prim's Algorithm, Kruskal's Algorithm), Single source Shortest paths problem and analysis of these problems. **Practical:** ● Code and analyse to find the edit distance between two character strings using dynamic programming. ● Code and analyse to find an optimal solution to matrix chain multiplication using dynamic programming.	**CO2**
	Unit 3: (14 hours) • **Dynamic Programming:** Elements of dynamic programming, Assembly-line scheduling problem, Matrix-chain multiplication, Multistage Graph, All Pairs Shortest paths, Longest common subsequence, Bin Packing, 0/1 Knap Sack and Travelling Salesman Problem **Practical:** ● Code and analyse to do a depth-first search (DFS) on an undirected graph. ● Code and analyse to do a breadth-first search (BFS) on an undirected graph.	**CO3**
	Unit 4: (14 hours) **Back Tracking:** General method, 8 queen's problem, Graph coloring and Hamiltonian Cycles, 0/1 Knap Sack Problem, NP-Completeness ,Polynomial Time, polynomial-time verification, NP completeness &reducibility, NP-complete problems, Cook's theorem, Approximation algorithms. **Practical:** ● Code and analyse to find shortest paths in a graph with positive edge weights using Dijkstra's algorithm. ● Code and analyse to find shortest paths in a graph with arbitrary edge weights using Bellman-Ford algorithm. ● Code and analyse to find the minimum spanning tree in a weighted, undirected graph.	**CO4**

Course Code	**CST309**						
Course Title	**Computer Graphics**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills CO1. Classify and describe various Computer Graphics tools and techniques. CO2. Analyse and apply various algorithms of 2D and 3D Transformations on different type of objects. CO3. Determine and apply appropriate 2D and 3D clipping algorithms and various projection techniques on different types of objects. CO4. Observe and Understand and differentiate various visibility and shading techniques and models. Practical: CO1. Design scan conversion problems using C/C++/Python programming CO2. Analyse and apply various algorithms of 2D Transformations on different type of objects in C/C++/Python Programming. CO3. Determine and apply appropriate 2D clipping algorithms on line CO4. Understand the practical implementations of the Bezier Curve						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	ATTENDANCE
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (16 hours)** • **Introduction:** Introduction, Application areas of Computer Graphics, overview of graphics systems, video-display devices, and raster-scan systems, random scan systems, graphics monitors and work stations and input devices**.** • **Scan Conversion:** Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms. Filled area primitives: Scan line polygon fill algorithm, boundary-fill and flood-fill algorithms **Practical:** ● To draw a line using DDA Algorithm. ● To draw a line using Bresenham's Algorithm. ● To draw a circle using trigonometric Algorithm.						**CO1**
	Unit 2: (20 hours) ● **Two dimensional transformations:** Translation, rotation, scaling, reflection and shear transformations, composite transformations ● **Two dimensional viewing and Clipping:** The viewing pipeline, viewing coordinate reference frame, window to						**CO2**

	view-port coordinate transformation, viewing functions, Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland – Hodgeman polygon clipping algorithm ● **Three dimensional transformations:** Geometric transformations, shear transformations, composite transformations. ● **Projections**: Perspective Projection and Parallel projection ● **Three dimensional Viewing**: Three dimensional Viewing, clipping, Viewing transformations **Practical:** ● To draw a circle using Bresenham's Algorithm. ● To draw a circle using Midpoint Algorithm. ● To draw an ellipse using Trigonometric Algorithm ● To rotate an object with a certain angle. ● To perform composite transformations of an object ● To draw an ellipse using Midpoint Algorithm. ● To translate an object with translation parameters in X and Y directions. ● To scale an object with scaling factors along X and Y directions. ● To clip line segments against windows.	
	Unit 3: (12hours) • **Curve and Surface design:** Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-Spline curves, Bezier and B-Spline surfaces • **Hidden Surfaces:** Z-Buffer algorithm, back-face detection, scan-line, The Painter's algorithm, area sub-division rendering of mathematical surfaces **Practical:** ● Demonstrate the properties of Bezier Curve.	**CO3**
	Unit 4: (12hours) • **Color and Shading models:** Introduction to shading models- Light and Colour, The Phong model, Interpolative shading models, Texture, Ray tracing	**CO4**

Course Code	**CST304**						
Course Title	**Big Data Analytics**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Understand the concepts of distributed file system CO2: Learn abstraction of hadoop environment CO3: Study the hadoop architecture CO4: Know the hadoop ecosystem and yarn components CO5: Learn different architecture like HIVE and HIVEQL, HBASE						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**	**0**	**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (10hours)** • Introduction to Big Data: Overview of Big Data, Stages of analytical evolution, Challenges of Conventional Systems, Intelligent data analysis, Nature of Data, Analytic Processes and Tools, Analysis vs. Reporting, Modern Data Analytic Tools, Statistical Concepts: Sampling Distributions - Re-Sampling, Statistical Inference - Prediction Error						**CO1**
	Unit 2: (12hours) • Mining Data Streams: Introduction To Streams Concepts, Stream Data Model and Architecture, Stream Computing, Sampling Data in a Stream, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments, Counting Oneness in a Window, Decaying Window, Real time Analytics Platform (RTAP) Applications						**CO2**
	Unit 3: (13hours) • Hadoop: History of Hadoop, The Hadoop Distributed File System, Components of Hadoop, Analysing the Data with Hadoop, Scaling Out- Hadoop Streaming, Design of HDFS-Java interfaces to HDFS Basics, Developing a Map Reduce Application, How Map Reduce Works, Anatomy of a Map Reduce Job run-Failures, Job Scheduling-Shuffle and Sort, Task execution, Map Reduce Types and Formats, Map Reduce Features						**CO3**

	Unit 4: (11hours) • Frameworks: Applications on Big Data Using Pig and Hive, Data processing operators in Pig Hive services, HiveQL, Querying Data in Hive, Fundamentals of HBase and Zookeeper, Visualizations: Visual data analysis techniques, interaction techniques. Systems and applications	**CO4**
Reference Books:	• Michael Berthold, David J. <tr><td>Course Code</td><td colspan="7">CST306</td></tr>
<tr><td>Course Title</td><td colspan="7">Python Programming</td></tr>
<tr><td>Course Outcomes</td><td colspan="7">On the completion of the course, the student will gain the following knowledge and skills:
CO1: To read and write simple Python programs.
CO2: To develop Python programs with conditionals and loops.
CO3: To define Python functions and to use Python data structure- lists, tuples, dictionaries
CO4: To implement object oriented programming concepts using python
CO5: To do exception handling and multithreading in Python
Practical:
CO1: Demonstrate familiarity with major algorithms and data structures.
CO2: Calculate and analyse performance of algorithms
CO3: Choose the appropriate data structure and algorithm design method for a specified application.
CO4: Identify which algorithm or data structure to use in different scenarios.
CO5: Familiar with writing recursive methods</td></tr>

Course Code	**CST308**						
Course Title	**Digital Image Processing**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Identify and describe operation of different smoothing and sharpening filters. CO2: Students are able to analyse the different segmentation techniques CO3: Students are able to apply different de-noising models to recover original image. CO4: Identify different pattern recognition methods and apply them in problem areas.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (15hours)** • Introduction: Digital Image- Steps of Digital Image Processing Systems-Elements of Visual Perception - Connectivity and Relations between Pixels. Simple Operations- Arithmetic, Logical, Geometric Operations. 2D Linear Space Invariant Systems - 2D Convolution - Correlation 2D Random Sequence - 2D Spectrum • Image Transforms: 2D Orthogonal and Unitary Transforms-Properties and Examples. 2D DFT- FFT – DCT, Histogram Equalization Technique- Point Processing-Spatial Filtering-In Space and Frequency - Nonlinear Filtering-Use of Different Masks						**CO1**
	Unit 2: (15hours) • Image Restoration: Image Observation And Degradation Model, Circulant And Block Circulant Matrices and Its Application In Degradation Model - Algebraic Approach to Restoration- Inverse By Wiener Filtering – Generalized Inverse-SVD And Interactive Methods - Blind Deconvolution-Image Reconstruction From Projections • Image Compression: Redundancy and Compression Models -Loss Less and Lossy. Loss Less- Variable-Length, Huffman, Arithmetic Coding - Bit-Plane Coding, Loss Less Predictive Coding Lossy Transform (DCT) Based Coding, JPEG Standard - Sub Band Coding.						**CO2**
	Unit 3: (15 hours)						**CO3**

	• Image Segmentation: Edge Detection - Line Detection - Curve Detection - Edge Linking and Boundary Extraction • Boundary Representation, Region Representation and Segmentation, Morphology-Dilation, Erosion, Opening and Closing. Hit and Miss Algorithms Feature Analysis	
	Unit 4: (15hours) • Colour and multispectral image processing: Colour Image-Processing Fundamentals, RGB Models, HSI Models, Relationship Between Different Models. • Pattern Recognition Representation Feature extraction and Pattern Representation, Concept of Supervised and Unsupervised Classification Introduction to Application Areas • Statistical methods for Pattern Recognition Bayes Decision Theory, Minimum Error and Minimum Risk Classifiers, Discriminant Function and Decision Boundary ,Normal Density, Discriminant Function for Discrete Features ,Parameter Estimation	**CO4**

Course Title	**Artificial Intelligence & Expert System**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: CO1: Explain what constitutes "Artificial" Intelligence and how to identify systems with Artificial Intelligence. CO2: Apply AI algorithms for solving practical problems such as search algorithms, minimax algorithm, neural networks, tracking CO3: Describe knowledge representation schemes and reasoning, how intelligent system works. CO4: Apply the methodology to transfer human knowledge into an expert system CO5: Design a knowledge base and implement a rule-based expert system						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (10hours)** Introduction: • Artificial Intelligence and its applications, Artificial Intelligence Techniques, Level of models, criteria of success, Intelligent Agents, Nature of Agents, Learning Agents. AI Techniques, advantages, and limitations of AI, Impact and Examples of AI, Application domains of AI. The AI Ladder - The Journey for Adopting AI Successfully, Advice for a career in AI, Hotbeds of AI Innovation.						**CO1**
	Unit 2: (14hours) • Problem solving techniques: State space search, control strategies, heuristic search, problem characteristics, production system characteristics., Generate and test, Hill climbing, best first search, A* search, Constraint satisfaction problem, Mean-end analysis, Min-Max Search, Alpha-Beta Pruning, Additional refinements, Iterative Deepening. • Logic: Propositional logic, predicate logic, Resolution, Resolution in proportional logic and predicate logic, Clause form, unification algorithm						**CO2**
	Unit 3: (12hours) Knowledge Representation schemes and reasoning:						**CO3**

	Mapping between facts and representations, Approaches to knowledge representation, procedural vs. declarative knowledge, Forward vs. Backward reasoning, Matching, conflict resolution, Non-monotonic reasoning, Default reasoning, statistical reasoning, fuzzy logic Weak and Strong filler structures, semantic nets, frame, conceptual dependency, scripts	
	Unit 4: (12hours) Introduction: Expert Systems, Definitions types, components, Expert System Development Process Knowledge Representation Techniques-Logic Frames, Semantic Nets. Learning: Learning, Planning and Explanation in Expert System: Neural Expert System, Fuzzy Expert System, Real Time Expert Systems.	**CO4**

Course Code	**CST401**						
Course Title	**Compiler Design**						
Course Outcomes	After successfully completing this course the students will be able to CO1: Understand the basics of compiler and identify the relationship among different phases of compiler. CO2: Understand the application of finite state machines, recursive descent, production rules, parsing and language semantics. CO3: Parser construction using different parsing techniques. CO4: Language identification and grammar writing. CO5: Applying Intermediate code generation techniques to provide platform independence. CO6: Apply Code Generation and Optimization techniques to generate optimized Assembly code.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (12hours)** Introduction and Lexical Analysis Introduction to Compilers, Analysis of the source program, the phases of a compiler, grouping of phases, The role of the lexical analyzer, Specification of tokens, Recognition of tokens, A language for specifying lexical analyzer, Scanning Process, Regular Expressions, Finite Automaton (NFA and DFA),LEX.						**CO1**
	Unit 2: (12hours) Syntax analysis: CFG's, Ambiguity, top down parsing, recursive descent parsing, transformation on the grammars, predictive parsing, bottom up parsing, operator precedence grammars, LR parsers (SLR, LALR, LR), YACC.						**CO2**
	Unit 3: (11hours) Syntax directed definitions: Inherited and Synthesized Attributes, Dependency Graph, Bottom up & Top down evaluation of attributes, L- and S-attributed definitions. Type Checking -Type Systems, Specification of a simple type checker.						**CO3**
	Unit 4: (10hours) Intermediate Code Generation: Intermediate representations, translation of declarations, assignments, control flow, Boolean expressions and procedure calls.						**CO4**

	Code Generation and Optimization: issues, basic blocks and flow graphs, register allocation, code generation, DAG representation of programs, and code generation from DAG, Peep-hole optimization, and code generator generators.

Course Code	**CST403**						
Course Title	**Distributed Systems**						
Course Outcomes	At the end of the course the students will be able to CO1: Understand the design principles in distributed systems and the architectures for distributed systems. CO2: Apply various distributed algorithms related to clock synchronization, concurrency control, deadlock detection, load balancing, voting etc. CO3: Analyse fault tolerance and recovery in distributed systems and algorithms for the same. CO4: Analyse the design and functioning of existing distributed systems and file systems. CO5: Implement different distributed algorithms over current distributed platforms.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (12hours)** Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges. System Models: Architectural models, Fundamental Models Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport's & vectors logical clocks, Causal ordering of messages, global state, and termination detection.						**CO1**
	Unit 2: (12hours) Distributed Mutual Exclusion: Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and non-token based algorithms. Distributed Deadlock Detection: System model, resource vs communication deadlocks, deadlock prevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms. Agreement Protocols: Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem, Interactive consistency Problem, Solution to Byzantine Agreement problem, Application of Agreement problem, Atomic Commit in Distributed Database system.						**CO2**

	Unit 3: (11hours) Distributed Objects and Remote Invocation: Communication between distributed objects, Remote procedure call, Events and notifications, Java RMI case study.	**CO3**
	Unit 4: (10hours) Distributed Transactions: Flat and nested distributed transactions, Atomic Commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery. Replication: System model and group communication, Fault - tolerant services, Transactions with replicated data. CORBA Case Study: CORBA RMI, CORBA services.	**CO4**

Course Code	**CST405**						
Course Title	**Natural Language Processing with Deep Learning**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills CO1: Describe three core Natural Language Processing (NLP) tasks and implement basic respective computational approaches: language modelling CO2: Identify and formulate a text processing for NLP and syntactic parsing. CO3: Design and carry out a sound experimental method for POS tagging, Neural-Network based NLP research. CO4: Analyse the results of an NLP experiment.						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	ATTENDANCE
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (15 hours)** • Introduction to NLP • N-Grams, Witten-Bell Discounting , Entropy • HMM**:** Overview, Viterbi Algorithm • Word Classes and Part-of Speech Tagging • Context Free Grammars for English, Parsing • Selection Restriction Based Disambiguation • Machine Learning; Supervised & Unsupervised Learning • Steps involved in machine translation system design **Practical** • Understanding and using string handling functions. • Handling Unicode data: Input, process and output Unicode data. • Implementation of n-gram, HMM for word sense disambiguation.						**CO1**
	Unit 2: (15hours) • Computing with Language • Accessing Text Corpora and Lexical Resources • Accessing Text from the Web and from Desk • Text Processing with Unicode • Regular Expression for Detecting Word Patterns, Tokenizing Text, Segmentation **Practical**						**CO2**

	• File handling: reading corpus from file and writing processed data on output file. • Implementing Regular Expression for Detecting Word Patterns, Normalizing Text, regular Expressions for Tokenizing Text and Segmentation.	
	Unit 3: (15hours) • Categorizing and Tagging Words • Mapping Words to Properties , Transformation Based Tagging • How to determine the category of a word. • Supervised Classification • Extracting Information from Text • Chunking, Recursion in Linguistics Structure • Relation Extraction **Practical** • Using online corpus. • Tokenization of corpus.	**CO3**
	Unit 4: (15hours) • Some Grammatical Dilemmas • Dependencies and Dependency Grammar, Grammar Development. • Processing Feature Structures, Extending a Feature-Based Grammar. • Analysing the meaning of Sentences by logics • Managing Linguistic Data: Corpus Structure **Practical** • Working with XML. • Working with Toolbox Data. • Describing Language Resources using OLAC Metadata	**CO4**
Reference Books:	• Speech and Language Processing: An Introduction to Natural Language Processing Computational Linguistics, and Speech Recognition by Jurafsky, D. & J. Martin • Readings in natural language processing", by Grosz, B.J., Sparck Jones, K. & Webber, B.L. (eds) • Natural Language Understanding", Redwood City, Benjamin/Cummings by Allen, J. • Natural Language Processing by Bharti, Akshar,ChaitanyaVineet, Sangal Rajeev • Deep Learning for Natural Language Processing. Apress by Palash Goyal, Sumit Pandey, Karan Jain • Understanding Flash Photography by Bryan Peterson

Course Code	**CST402**						
Course Title	**Information Security**						
Course Outcomes	Theory: After successfully completing this course the students will be able to CO1: Describe the fundamental concepts of information system security. CO2: Analyse block cipher encryption algorithm CO3: Understand the concept of advance encryption algorithm, public key cryptography and key management CO4: Describe authentication protocols, Hashing functions and hash algorithm CO5: Understand the following terms: Authentication applications, IP security policy, host based security, firewall, and packet filtering and intrusion detection Practical: CO1: To implement Symmetric and Asymmetric cipher techniques. CO2: Demonstrate the concept of random numbers generation CO3: To implement various network security algorithms to cipher and decipher the text. CO4: Implement of system security methods						
Examination Type	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	ATTENDANCE
Weightage	**10**		**25**		**35**	**25**	**5**
Examination Mode	Theory + Practical						
Syllabus	**Unit 1: (15hours)** Core Information Security Principles, CIA (Confidentiality, Integrity, Availability), Information Security Management Governance, Security Policies, Procedures, Standards. Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography. Block Ciphers and The Data Encryption Standard: Simplified DES, Block Cipher Principles, The Data Encryption Standard, The Strength of DES, Differential and Linear Cryptanalysis, Block Cipher Design Principles, Block Cipher Modes of Operation. Introduction To Finite Fields: Groups, Rings, and Fields, Modular Arithmetic, Euclid's Algorithm.						**CO1**
	Unit 2: (15hours) Advanced Encryption Standard: Evaluation Criteria for AES, The AES Cipher. Contemporary Symmetric Ciphers: Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher.						**CO2**

	Public-Key Encryption: Introduction to Number Theory: Prime Numbers, Format's and Euler's Theorems, Testing for primarily, the Chinese Remainder Theorem, and Discrete Logarithms. Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems, the RSA Algorithm. Key Management and Other Public-Key Crypto systems: Key Management, Diffie-Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography. Implementing Regular Expression for Detecting Word Patterns, Normalizing Text, regular Expressions for Tokenizing Text and Segmentation.	
	Unit 3: (15hours) Message Authentication and Hash Functions: Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions and MACs. Hash Algorithms: MD5 Message Digest Algorithm, Secure Hash Algorithm and HMAC. Digital Signatures and Authentication Protocols: Digital Signatures, Authentication Protocols, Digital Signature Standard.	**CO3**
	Unit 4: (15hours) Network Security Practice: Authentication Applications: Kerberos, X.509 Authentication Service, Electronic Mail Security: Pretty Good Privacy, S/MIME. IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management, Web Security: Web Security Considerations, Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction. System Security: Intruders: Intruders, Intrusion Detection, Password Management, Malicious Software: Viruses and Related Threats, Virus Countermeasures, Firewalls: Firewall Design Principles, Trusted Systems.	**CO4**
List of Practical(s)	• Implementation of symmetric techniques (Ceaser cipher, mono alphabetic, polyalphabetic, hill-Cipher, vigenere cipher) • Implementation of transposition techniques (Rail-fence, transposition of columns) • Implantation of Block Cipher techniques (Play fair cipher, Data Encryption Standard) • Implementation of algorithm used for Random Number Generation (Blum blum shub) • Implementation of algorithm used for calculating GCD (Euclidean algorithm). • Implementation of algorithm used for calculating multiplicative inverse (Extended-Euclidean)	

	• Implementation of algorithm used for testing for Primarily (Chinese Remainder Theorem) • Implementation of RSA Algorithm. • Elliptic Curve Cryptography. • HashAlgorithms: MD5 Message Digest Algorithm, Authentication Protocols. • System Security: Firewalls: Firewall Design Principles	
Reference Books:	• William Stallings, "Cryptography and network Security", Pearson Education 2003. • Trappe & Washington, "Introduction to Cryptography with Coding Theory", Prentice-Hall 2001 • D Stinson, "Cryptography: Theory and Practice", Second Edition Chapman & Hall 2002. • Kaufman, Perlman, and Speciner, "Network Security", Prentice-Hall Second Edition 2001. • Michael E. Course Code	**CST404**						
Course Title	**Mobile Computing & Communication**						
Course Outcomes	On the completion of the course, the student will gain the following knowledge and skills: **CO1:** Define mobile technologies in terms of hardware, software, and communications. **CO2:** Utilize mobile computing nomenclature to describe and analyse existing mobile computing frameworks and architectures. **CO3:** Evaluate the effectiveness of different mobile computing frameworks. **CO4:** Describe how mobile technology functions to enable other computing technologies.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (12hours)** Mobility: Issues, challenges, and benefits; Review of mobile and cellular communication technology; Review of distributed/network operating systems, ubiquitous computing. Global System for Mobile Communication (GSM) System Overview: GSM Architecture, Mobility Management, Network Signalling, GPRS.						**CO1**
	Unit 2: (11hours) Mobile IP Networks: Physical mobility, challenges, limits and connectivity, mobile IP and cellular IP in mobile computing. Mobile Transport Layer: Transport layer issues in wireless, Indirect TCP, Snoop TCP, Mobile TCP						**CO2**
	Unit 3: (11hours) Wireless LANs: Introduction to IEEE 802.11, Bluetooth technologies and standards. Mobile Adhoc Networks: Hidden and exposed terminal problems; routing protocols: DSDV, DSR, and AODV.						**CO3**
	Unit 4: (11hours) Mobile Devices and OS: Various types of Devices, Operating System: PalmOS, Windows CE, Windows Mobile. Application Development: WWW programming model, Development Environment for Mobile Devices.						**CO4**

Reference Books:	1. A. S. Tanenbaum. : Computer Networks, 4th Ed., Pearson Education. 2. D. Milojicic, F. Douglis. : Mobility Processes, Computers and Agents", Addison Wesley 3. Raj Kamal : Mobile Coomputing, Oxford University Press

Course Code	**CST406**						
Course Title	**Principles of Soft Computing**						
Course Outcomes	At the end of this course student will: CO1) Demonstrate Fuzzy set theory and Interpret fuzzy systems CO2) Apply ANN Back propagation algorithm for classification CO3) Apply ANN training algorithms for solving real world problems CO4) Explain fundamentals and operators of Genetic Algorithm.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**	**0**	**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (11hours)** Fuzzy Set Theory: Fuzzy Versus Crisp, Crisp Sets, Fuzzy Sets, Crisp Relations, Fuzzy Relations UNIT 2 Fuzzy Systems: Crisp Logic, Predicate Logic, Fuzzy Logic, Fuzzy Rule Based Systems, Defuzzification Methods, Applications.						**CO1**
	Unit 2: (12hours) Fundamentals of Neural Networks: Basic Concepts of Neural Networks, Human Brain, Model of an Artificial Neuron, Neural Network Architectures, Characteristics of Neural Networks, Learning Methods, Taxonomy of Neural Network Architectures. Back Propagation Networks: Architecture of a Back Propagation Network, Back Propagation Learning, Illustration, Applications (Classification of Soil only).						**CO2**
	Unit 3: (12hours) Associative Memory: Autocorrelations, Hetero-correlators, Associative Memory for Real-Coded Pattern Pairs, Applications (Recognition of Characters only). Adaptive Resonance Theory: Introduction, ART1, ART2, Applications (Recognition of Characters only), Sensitive's of Ordering of Data.						**CO3**
	Unit 4: (11hours) Fundamentals of Genetic Algorithms: Genetic Algorithms: History, Basic Concepts, Creation of Offspring, Working Principle, Encoding, Fitness Function, Reproduction. Genetic Modeling: Inheritance Operators, Cross Over, Inversion, And						**CO4**

	Deletion, Mutation Operator, Bit-Wise Operators, Bit-Wise Operators used in GA, Generational Cycle, Convergence of Genetic Algorithms, Hybrid Systems(10.1), NN & FL & GA Hybrids(10.2)

Course Code	**CST320**						
Course Title	**Software Project Management**						
Course Outcomes	On the completion of the course the student will be able to CO1: Understand Project Management principles while developing software. CO2: Gain extensive knowledge about the basic project management concepts, framework and the process models. CO3: Obtain adequate knowledge about software process models and software effort estimation techniques. CO4: Estimate the risks involved in various project activities. CO5: Define the checkpoints, project reporting structure, project progress and tracking mechanisms using project management principles.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**		**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (11hours)** • Importance of Software Project Management • Activities – Methodologies – Categorization of Software Projects – • Setting objectives – Management Principles • Management Control – Project portfolio Management • Cost-benefit evaluation technology • Risk evaluation – Strategic program Management • Stepwise Project Planning.						**CO1**
	Unit 2: (12hours) • Software process and Process Models • Choice of Process models • Rapid Application development – Agile methods • Dynamic System Development Method • Extreme Programming • Managing interactive processes • Basics of Software estimation • Effort and Cost estimation techniques • COSMIC Full function points – COCOMO II • A Parametric Productivity Model.						**CO2**
	Unit 3: (12hours) • Objectives of Activity planning • Project schedules – Activities • Sequencing and scheduling • Network Planning models						**CO3**

	• Formulating Network Model • Forward Pass & Backward Pass techniques • Critical path (CRM) method • Risk identification • Risk Planning • Creation of critical paths • Cost schedules.	
	Unit 4: (11hours) • Framework for Management and control • Collection of data – Visualizing progress • Cost monitoring • Earned Value Analysis • Prioritizing Monitoring • Project tracking, Change control • Software Configuration Management • Managing contracts	**CO4**

Course Title	**New Age Technologies**						
Course Outcomes	On the completion of the course the student will be able to CO1: Obtain adequate knowledge about block chain CO2: Gain extensive knowledge about the cloud computing and services CO3: Understanding the importance of internet of things and its application CO4: Have Overview in data analysis and big data						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**		**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (11hours)** **Block chain** • Introduction to Block chain: • Digital Money to Distributed Ledgers, • Design Primitives: Protocols, Security • Consensus, Permissions, Privacy. • Block chain Architecture and Design: • Basic crypto primitives: Hash, • Signature, Hash chain to Block chain, Bit coin Basic, • Basic consensus mechanisms.						**CO1**
	Unit 2: (12hours) **Cloud Computing & Edge Computing** • Introduction: Cloud Computing – • Definition of Cloud - Cloud Architecture • Types of Clouds - Business models around Clouds • Issues in Clouds – • Eucalyptus - Nimbus - Open Nebula, CloudSim. • Cloud Services: • Types of Cloud services: • Software as a Service Platform as a Service						**CO2**
	Unit 3: (12hours) **Internet of Things** • Getting Familiar with internet of Things (IoT): • Definition, Characteristics. Physical Design of IoT: • Things in IoT, IoT Protocols. • Logical Design of IoT: Functional block, • Communication Models and APIs, IoT Stack • Overview of Domain Specific						**CO3**

	• IoTs applications Like Smart Cities, Smart Agriculture and industrial IoT Applications. • Types of Sensors. integrating Sensors: HDT (Humidity and Temperature Sensor)	
	Unit 4: (12hours) **Data Science & Big Data** • Sources and nature of data, • Classification of data (structured, semi-structured, unstructured), need of data analytics • Evolution of analytic scalability, • Modern data analytic tools, applications of data analytics. • Introduction to Big Data: • Types of digital data, history of Big Data innovation, • Big Data privacy and ethics, • Big Data Analytics, • Challenges of conventional systems.	**CO4**

Course Title	**System Simulation & Modelling**						
Course Outcomes	After successfully completing this course the students will be able to CO1: Demonstrate the simulation categorization at various levels. CO2: Discuss the fundamental elements of discrete-event simulation including statistical models, random processes, random variants, and inputs to simulation CO3: Analyse a real world problem and apply modelling methodologies to develop a discrete-event simulation model CO4: Recognize the cost/benefits of computer simulation, the generation of meaningful results, decision making, and risks CO5: Analysing the verification and validation of simulation model.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**		**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (11hours)** Introduction to Simulation: System & System Environment, Components of a System, Discrete and Continuous Systems, Model of a System and Types of Models, Discrete Event System Simulation, Advantages and Disadvantages of Simulation, Areas of Application Techniques of Simulation: Monte Carlo Method, Types of System Simulations, Real Time Simulation, Stochastic Variables, Discrete Probability Functions.						**CO1**
	Unit 2: (12hours) General Principles: Concepts in Discrete Event Simulation, Event Scheduling /Time Advance Algorithm, List Processing, Using Dynamic Allocation & Linked List Simulation Software: History of Simulation Software, Selection of Simulation Software, Simulation in C++, GPSS, Simulations Packages, Trends in simulation Software Statistical Models in Simulation: Useful Statistical Models, Discrete Distributions, Continuous Distributions, Poisson Process, Empirical Distributions. Cobweb model and distributed lag model.						**CO2**
	Unit 3: (12hours) Queuing Models: Characteristics of Queuing systems, Queuing Notation, Long Run Measures of performance of Queuing Systems, Steady State Behaviour of infinite Population						**CO3**

	Markovian Models, Steady State Behaviour of finite Population Models, Networks of Queues. Random Number Generation: Properties of Random Numbers, Generation of Pseudo-Random Numbers, Techniques for Generating Random Numbers, Tests for Random Numbers, Inverse transform Techniques, Convolution Methods, and Acceptance –Rejection Techniques.	
	Unit 4: (11hours) Input Modelling: Data Collection, Identifying the Distribution with Data, Parameter Estimation, Chi – Square Test, Selecting Input Models with Data. Verification & Validation of simulation Modelling: Model Building, Verification & Validation, Verification of simulation Models, Calibration & Validation of Models.	**CO4**

Course Code	**CST437**						
Course Title	**Parallel computing**						
Course Outcomes	After successfully completing this course the students will be able to CO1: Apply the fundamentals of parallel and distributed computing including parallel architectures and paradigms. CO2: Have knowledge on Different Structures of Parallel computational models CO3: Analyse the performance Metrics and classify parallel processors. CO4: Develop various parallel algorithms for programing.						
Examination Type	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MSP	ESE	ESP	Attendance
Weightage	**10**	**10**	**25**		**50**		**5**
Examination Mode	Theory						
Syllabus	**Unit 1: (10hours)** Introduction: Paradigms of parallel computing: Synchronous - vector/array, SIMD, Systolic; Asynchronous- MIMD, reduction paradigm. Hardware taxonomy: Flynn's classifications, Handler's classifications. Software taxonomy: Kung's taxonomy, SPMD.						**CO1**
	Unit 2: (12hours) Abstract parallel computational models: Sequential model, need of alternative model, parallel computational models such as PRAM, LMCC, Hypercube, Cube Connected Cycle, Butterfly, Perfect Shuffle Computers, Tree model, Pyramid model, Fully Connected model, PRAM-CREW, EREW models, simulation of one model from another one, Sorting network, Interconnection RAMs. Parallelism approaches - data parallelism, control parallelism.						**CO2**
	Unit 3: (12hours) Performance Metrics: Laws governing performance measurements. Metrics - speedups, efficiency, utilization, communication overheads, single/multiple program performances, benchmarks. Parallel Processors: Taxonomy and topology - shared memory multiprocessors, distributed memory networks. Processor organization - Static and dynamic interconnections.						**CO3**
	Unit 4: (11hours) Parallel Programming: Shared memory programming, distributed memory programming, object oriented						**CO4**

	programming, data parallel programming, functional and dataflow programming. Scheduling and Parallelization: Scheduling parallel programs. Loop scheduling. Parallelization of sequential programs. Parallel programming support environments.
