

FACULTY OF SCIENCE

**Course Scheme & Syllabus
For
Bachelor of Computer Applications (Hons.)
Specialization in
Artificial Intelligence & Machine Learning**

**(As per NEP-2020)
Batch-2024 & onwards**

Introductory Note of the Programme

The BCA program is designed to equip you with the knowledge and skills necessary to thrive in the rapidly evolving field of information technology. Over the course of this program, you will explore various aspects of computer science, including programming languages, database management, software development, networking, web development, and much more. Our curriculum is carefully crafted to strike a balance between theoretical knowledge and practical application, ensuring that you not only grasp the fundamental concepts but also gain hands-on experience in solving real-world problems.

Throughout this program, you will delve into the fundamentals of Cyber Security, including topics such as network security, cryptography, ethical hacking, risk management, incident response, and digital forensics. You will learn how to identify vulnerabilities, implement preventive measures, and respond effectively to security incidents, ensuring the integrity, confidentiality, and availability of digital information.

Program Educational Objectives (PEOs)

PEO-1. Work productively as successful Computer professionals in diverse career paths including supportive and leadership roles on multidisciplinary teams or be active in higher studies.

PEO-2. Communicate effectively, recognize and incorporate societal needs and constraints in their professional endeavours, and practice their profession with high regard to ethical responsibilities.

PEO-3. Engage in life-long learning and to remain current in their profession to foster personal and organizational growth.

Programme Outcomes (POs)

PO-1: Apply mathematics and computing fundamental and domain concepts to find out the solution of defined problems and requirements. (Computational Knowledge)

PO-2: Use fundamental principle of Mathematics and Computing to identify, formulate research literature for solving complex problems, reaching appropriate solutions. (Problem Analysis)

PO-3: Understand to design, analyse and develop solutions and evaluate system components or processes to meet specific need for local, regional and global public health, societal, cultural, and environmental systems. (Design/Development of Solutions)

PO-4: Use expertise research-based knowledge and methods including skills for analysis and development of information to reach valid conclusions. (Conduct Investigations of Complex Computing Problems)

PO-5: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. (Modern tool usage)

PO-6: Exhibiting ethics for regulations, responsibilities and norms in professional computing practices.
(Professional Ethics)

PO-7: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development (Environment and sustainability).

PO-8: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice (Ethics).

PO-9: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings (Individual and team work).

PO-10: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions (Communication).

PO-11: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments (Project management and finance).

PO-12: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change (Life-long learning).

Program Specific Objectives (PSOs)

PSO-1: To explore technical comprehension in varied areas of Computer Applications and experience a conducive environment in cultivating skills for thriving career and higher studies.

PSO-2: To comprehend, explore and build up computer programs in the allied areas like Algorithms, System Software, Multimedia, Web Design and Data Analytics for efficient design of computer-based systems of varying complexity.

Mapping of POs with PEOs

PEOs→ POs↓	PEO 1	PEO 2	PEO 3
PO1	Yes	Yes	Yes
PO2			Yes
PO3	Yes		Yes
PO4		Yes	
PO5		Yes	
PO6			Yes
PO7	Yes		Yes
PO8			
PO9		Yes	
PO10	Yes		Yes
PO11		Yes	
PO12	Yes	Yes	

Mapping of PSO with PEO

PEOs→ PSO↓	PEO 1	PEO 2	PEO 3
PSO1	Yes	-----	Yes
PSO2	-----	Yes	Yes

1	CSP415	Research Project	-----		0	0	24	12
Total								12

L- Lectures T- Tutorial P- Practical Cr.- Credits

FOURTH EXIT:

The student will be awarded “Bachelor of Computer Science and Applications (Hons.) Specialization in Cyber Security” degree after exit at this point.

List of multi-disciplinary open elective courses at DAV University

Sr. No.	Course Name	Faculty/Department
1	Basics of Physics	Physics
2	Basics of Chemistry	Chemistry
3	Basics of Biology	Zoology & Botany
4	Introductory Biotechnology	Biotechnology
5	Introductory Microbiology	Microbiology
6	Functioning of the Human Body	Zoology
7	Introductory Botany	Botany
8	Business Management for Beginners	CBME
9	Fundamental of Mutual Funds	CBME
10	Economics for Beginners	CBME
11	Professional Communication	English
12	Fine Arts	Arts, Fine Arts & Performing Arts
13	Jyotish: 'Eye of the Veda'	Vedic Studies
14	Mathematical Statistics	Mathematics
15	Introductory Journalism	JMC
16	Professional Photography	JMC
17	Library Information Sciences	Library Sciences

Common courses with credits

Ability-Enhancement Courses	Cr.	Skill-Enhancement Courses	Cr.	Value-Added Courses	Cr.
Personality Enhancement	1L+1P	Essentials of Entrepreneurship-Thinking and Action	2L+1P	Environmental Studies (Mandatory)	2L+1P
Personality Development	2P	Design Thinking	2P	Human Values and Ethics (Mandatory)	2L+1T
Behavioural & Life Skills	1L+1P	Design Thinking & Innovation	2L	Gender Sensitization	2L
Global Citizenship in Higher Education	2L	Data Analytics	2L+1P	Professional Ethics	2L
Communication Skills (Mandatory)	1L+1P	Cyber Security	3 (2L+1P)	Sustainable Development	2L
OR		Digital Fluency	1L+1P	Green Technologies	2L
Cambridge English-I (Mandatory#) & Cambridge English-II (Mandatory#)	1L+1P 1L+1P				
<i># To be offered in two semesters</i>					
Health & Yoga	1L+1P	Fundamentals of Computer programming & IT(FCPIT)	2L	General Studies	2L
Technical Report Writing	2L	Python Programming	3 (2L+1P)	NSS	2 (1L+1P)
Leadership Management	2L	Disaster Preparedness and Planning	2L		
Therapeutic Yoga	1L+1P	Intellectual Property Rights	2L		
Creative & Critical Thinking	1L+1P	Apiculture	2P		
Community Engagement & Social Responsibility (Mandatory)	1L+1P	NCC*	3 (2L+1P)		

		LATEX	3 (1L+2P)		
		Programming with FORTRAN	3(2L+1P)		

Notes:

a. Due to the constraint on total number of credits to be restricted under 160 for four year UG programmes, the mandatory courses which may or may not fall under ability-enhancement, skill-enhancement (common) or value-added courses can be offered as non-credit course and the student will have to qualify (as Satisfactory/Unsatisfactory) these courses to secure minimum passing marks through the process of assessment as mandated by DAV University.

b. Minimum number of students feasible to run a common course (Ability- enhancement,

c. Skill-enhancement (common) and Value-added) will be 20 students.

d. *Pre-requisite to opt NCC is that the student must be in possession of Certificate B or has appeared in B-certificate exam of NCC. NCC course shall run in two semesters of 3 credits (2L+1P) in each semester. Student who wishes to opt for NCC is required to study in two semesters of total 6 credits

Semester 1

L	T	P	Credit
3	0	0	3

Course Code	CSP101						
Course Title	Principles of Digital Electronics						
Course Outcomes	On the completion of the course the student will be able to CO1: To provide the knowledge about the various electronics components and digital circuits to the students and designing of various building blocks of computer system concepts. CO2: To introduce the basic concepts and laws involved in the Boolean algebra and logic families and digital circuits. CO3: To familiarize with the different number systems, logic gates, and combinational and sequential circuits utilized in the different digital circuits and systems. CO4: To design and analysis of the digital circuit and system. After studying this subject student will be able to easily understand the internal working of digital electronic circuits.						
Examination Mode	Theory/ Practical/ Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	5%
Syllabus							CO Mapping
Unit 1	Fundamentals of Digital Electronics & Number System						CO 1
•	Definitions of Digital Signals, Digital Waveform, Digital Logic, Gate propagation delay time, Digital Operations, Digital Integrated Circuits, Digital IC signal levels.						
•	Decimal Number System, Binary Number System, Octal Number System, Hexadecimal Number System, Conversion from One Number System to another, Arithmetic Operation without Changing the Base, 1's Complement and 2's Complement.						
•	Logic Gates: AND, OR, NOT, NAND, NOR XOR, XNOR, NAND & NOR as Universal Gates, Logic Gates Applications.						
Unit 2	Boolean Algebra & Combinational Circuits						CO2
•	Introduction, Theorems, Simplification of Boolean Expression using Boolean Algebra, SOP&POS Forms, Realization of Boolean Expression using Gates, K Maps, Simplification of Boolean Expression using K Maps.						
•	Half Adder & Half Subtractor, Full Adder & Full Subtractor, Parallel Binary Adder, Binary Adder/Subtractor.						
Unit 3	Combinational & Sequential Logic Circuits						CO3

•	Multiplexers Demultiplexers, Implementation of Boolean equations using Multiplexer and Demultiplexer	
•	Encoders Decoders.	
•	Latch, Flip Flops RS Flip Flop, JK Flip Flop, Master Slave JK Flip Flop Race Condition, Removing Race Condition, D Flip Flop, T Flip Flop, Applications of Flip Flops	
Unit 4	Semiconductor& Memories	CO 4
•	Introduction, Static and dynamic devices, read only &random-access memory chips, PROMS and EPROMS Address selection logic.	
•	Read and write control timing diagrams for ICs.

L	T	P	Credit
2	0	2	3

Course Code	CSP102						
Course Title	Computer Fundamentals and Office Automation						
Course Outcomes	On the completion of the course the student will be able to CO1: Illustrates different components of computer, its Characteristics, generations and application. Explain different number system used in computer system and binary arithmetic. CO2: Introduce computer memory and I/O devices. Explain different computer languages and types of computer operating system. CO3: Discusses DOS history and various DOS commands. Introduce features of MS word and its usage. CO4: Introduce excel worksheet and various excel functions. Explain use of MS-Power point and MS-Access.						
Examination Mode	Theory/ Practical/ Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	5%
Syllabus							CO Mapping
Unit 1	Fundamentals of Computer & Number System						CO1
•	Block Structure of a Computer, Characteristics of Computers, Computer generations, Applications of Computers. Classification of Computers based on size and chronology.						
•	Bit, byte, binary, decimal, hexadecimal, and octal systems, conversion from one system to the other, representation of characters, integers and fractions.						
•	Binary Addition, subtraction and multiplication.						
Unit 2	Operating System, Memory Types & Input/output Devices						CO2
•	RAM, ROM, Cache and Secondary memory.						
•	Input devices: Keyboard, Mouse, Light pen, Joystick, Mouse, OCR, OMR, MICR. Output devices: Monitor, Impact, non-impact, working mechanism of Drum printer, Dot Matrix printer, Ink jet printer and Laser printer, plotters.						
•	Machine language, assembly language, higher level language, 4GL and introduction to Compiler, Interpreter, Assembler.						
•	Batch, multi programming, time sharing, multi-processor operating system, online and real time operating system, distributed operating system.						
Unit 3	Disk Operating System & MS Word						CO3

•	DOS–History, Internal and External Commands, Batch Files	
•	Salient Features Of MSWORD, Creating, saving, opening and printing files, formatting pages, paragraphs and sections, checking Spelling and grammar; creating lists and numbering. Headings, styles, fonts and font size. Finding and replacing text, inserting page breaks, page numbers, symbols, images and dates. Using tables, header, footer. Using mail merge features.	
Unit 4	MS Excel, MS PowerPoint and MS Access	CO4
•	Excel Worksheet, Data Entry, Editing, Cell Addressing Ranges, Copying & Moving Cell Content, Inserting and Deleting Rows and Column, Column Formats, Printing, Creating, displaying charts, Working with functions - Date and time function, Statistical function, Mathematical and Trigonometric functions, Text function, Logical functions.	
•	Presentation overview, entering information, Presentation creation, opening and saving presentation, using transitions and animations.	
•	Creating a Database using MS Access, Basic Tables, Using Queries, Using the Auto Form Feature, Form Design, Using the Auto Report Feature, Report Design, Copying Data, Freezing Columns, Printing Tables, Printing Reports, Sorting Records, Using the Filter Sorts, Renaming Columns.

3	0	2	4

Course Code	CSP103						
Course Title	Algorithm Design and Programming Using C						
Course Outcomes	On the completion of the course the student will be able to CO1: To define the concept of problem solving and steps to solving problems in computer application are using algorithms, pseudo-codes and flowcharts sequential, selection and repetition structure. CO2: To understand the Concept of fundamentals of programming & Control structure. CO3: Apply the concepts of Function, arrays, Structure & Union. CO4: Demonstrate the ability to write C programs using pointers and file handling.						
Examination Mode	Theory/ Practical/ Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	5%
Syllabus							CO Mapping
Unit 1	Fundamentals of algorithms and programming, Operations and Expressions & Control Structures						CO1
•	Concept: problem-solving, Problem-solving techniques (Trial & Error, Brain storming, Divide & Conquer), Steps in problem solving (Define Problem, Analyze Problem, Explore Solution), Algorithms and Flowcharts (Definitions, Symbols), pseudo-codes.						
•	Character Set, Identifiers and Keywords, Data types, Constants, Variables, Expressions, Statements, Symbolic Constants and Operators & its types.						
•	Single Character Input, Single Character Output, Entering Input Data More About Scan Functions, Writing Output Data, More About Print Functions, Gets and Puts Functions, Library functions.						
Unit 2	Decision Making and Looping Statements & Array						CO2
•	Introduction, Decision Making with If-Statement, If Else and Nested If, While and Do-While, For Loop, Jump Statements: Break, Continue, Go to, Switch Statement.						
•	Introduction to Arrays, Array Declaration, Single and Multi-dimensional Array, Memory Representation, Matrices, Strings, String Handling Functions.						
Unit 3	Functions, Structure and Union						CO3
•	Introduction To Functions, Function Declaration, Function Categories, Standard Functions, Parameters and Parameter Passing, Pass – By Value/Reference Recursion, Global and Local Variables, Storage Classes.						
•	Declaration of Structure, Accessing Structure Members, Structure Initialization, Arrays of Structure, Nested Structures, Unions.						
Unit 4	Pointers, Files & Preprocessor Directives						CO4

•	Introduction To Pointers, Address Operator and Pointers, Declaring and Initializing Pointers, Assignment through Pointers, Pointers and Arrays.	
•	Introduction, creating a Data File, Opening and Closing a Data File, Processing a Data File.	
•	Introduction and Use, Macros, Conditional Preprocessors, Header Files

Course Title: Office Automation Laboratory
Course Code: CSP102

L	T	P	Credits	Marks
0	0	2	1	50

- Working of DOS internal & external commands.
- Learning to use MS WORD, MS EXCEL.
- Using MS PowerPoint to make slides and presentations.
- Introduction to the Database Window, Database Objects, Database Terminology
- Creating a Database using MS Access, Basic Tables
- Using Queries, Using the Auto Form Feature Form Design
- Using the Auto Report Feature, Report Design
- Copying Data, Freezing Columns
- Printing Tables, Printing Reports
- Sorting Records, Using the Filter Sorts, Renaming Columns

Course Title: C Programming Laboratory
Course Code: CSP103

L	T	P	Credits	Marks
0	0	2	1	50

Implementation of C programming concepts:

- Control Structures, Loops, Arrays, Strings
- Functions, Structures, Union, Files, etc.

Semester - 2

L	T	P	Credit
3	0	2	4

Course Code	CSP104						
Course Title	Object Oriented Programming using C++						
Course Outcomes	On the completion of the course the student will be able to CO1: Discuss the concepts of OOPs. Comparison with the previously developed languages. CO2: Developing the concepts of Classes and object by using real-world examples. CO3: Implement the concepts of Friend function and Inheritance. CO4: Developing the programs using the concept of virtual function and using the concept of file handling. CO5: Interaction with the IDE and help in understanding the concept of OOPs.						
Examination Mode	Theory/ Practical/ Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	5%
Syllabus							CO Mapping
Unit 1	Introduction to OOPS & Class Concepts						CO1,5
•	Evolution Of OOP, OOP Features of C++, Characteristics of Object-Oriented Language – Objects, Classes, Inheritance, Reusability, User Defined Data Types, Polymorphism, Overloading, Comparison of C with C++.						
•	Class and Objects, Inline Functions, Static Data, Members and Member Functions, Constructors and Destructors.						
•	Dynamic Objects, Array of Pointers to Object, Pass By Value Vs. Pass By Reference, Local and Global Class, Nested and Empty Class, Preprocessor Directives, Namespace.						
Unit 2	Console/O & Operator Overloading						CO2
•	Hierarchy of Console Stream Classes, Unformatted and Formatted I/O Operations, Manipulators						
•	Overloadable Operators, Overloading Unary and Binary, Arithmetic and Relational Operators, Overloading Subscript, Array, Insertion, Extraction, New and Delete Operators.						
Unit 3	Friend Function and Type Conversion & Inheritance						CO3
•	Friend Function, Function Overloading, Overloading Operators through Friend Function						
•	Basic Type Conversion, Conversion Between Objects and Basic Types, Conversion Between Objects of Different Classes						
•	Derivation Rules, Different Forms of Inheritance, Roles of Constructors and Destructors in Inheritance						
Unit 4	Virtual Functions & File Handling						CO4
•	Virtual Functions and Their Needs, Pure Virtual Function, Virtual Destructor, Virtual Derivation, Abstract Class.						

•	Hierarchy of File Stream Classes, Opening and Closing Files.	
•	File Modes, Testing for Errors, File Pointers and Their Manipulations,	
	ASCII & Binary Files, Sequential and Random-Access Files

Course Code	CSP105						
Course Title	Web Designing						
Course Outcomes	On the completion of the course the student will be able to CO1: Introduce the creation of static webpages using HTML. CO2: Using PHP for back-end manipulations, arrays and functions. CO3: Working with PHP forms and manipulating files. CO4: Publishing web sites.						
Examination Mode	Theory/ Practical/ Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	5%
Syllabus							CO Mapping
Unit 1	Introduction to Web Development & HTML/DHTML						CO1
•	Website, Webpage, Static Website, Dynamic Website.						
•	HTML Basics, HTML Elements (Tags), Structure of HTML Program, Attributes, Headings, Paragraphs, Formatting, Links, Images, Tables, Lists, Forms, Frames, where to put Tables, Lists, Images, Forms.						
•	CSS in D HTML, Implementation of Web Pages using CSS						CO2
Unit 2	Introduction to PHP						
•	Introduction to PHP, PHP Environment, Syntax Overview, Variable Types.						
•	Decision Making, Control Statements, Arrays, Strings, Functions and Objects						
Unit 3	PHP forms and manipulating files and Connectivity						CO3
•	Working with Forms, Web Concepts, GET & POST, Maintaining Cookies and Sessions						
•	Working with Files, Opening, closing, coping, renaming and deleting a file, File uploading and downloading, Generating and creating Images with PHP						
•	Database Connectivity with MySQL, performing basic operations (insert, delete, update, select).						
Unit 4	Purchasing a Domain Name & Web Space						CO4
•	Domain Name & Web Space, Getting a Domain Name & Web Space (Purchase or Free),						
•	Uploading the Website to Remote Server.						

Reference Book/s	1. Powell Thomas, <i>HTML& CSS: The Complete Reference</i>, New Delhi: Mc Graw-Hill, Fifth Edition (2010). 2. Course Title: Web Designing Laboratory

Course Code: CSP105

L	T	P	Credits	Marks
0	0	2	1	50

- Web designing using HTML, DHTML, CSS, and PHP.

Course Title: Object Oriented Programming Structures Laboratory

Course Code: CSP104

L	T	P	Credits	Marks
0	0	2	1	50

- Implementation of OOP concepts using C++
- Write program in 'C++' language. • Using input and output statements • Using control statements.
- Using functions.
- Using array
- Using Classes and implementation of Constructor and Destructor.
- Using files.
- Using OOP's Concepts (Inheritance, Polymorphism, Encapsulation, Friend and Static Functions, Exception Handling)

Semester –3

Course Code	CSP201						
Course Title	Computer Oriented Numerical and Statistical Techniques						
Course Outcomes	On the completion of the course the student will be able to CO1: Understand various significant and fundamental concepts to inculcate in the students an adequate understanding of the application of Numerical Algorithms and Statistical Methods. CO2: Understand and learn numerical methods for numerical analysis. CO3: Understand the implementation of numerical methods using a computer and learning of tracing errors in Numerical methods and analyze and predict it. CO4: Understand and Learn Statistical methods and Techniques.						
Examination Mode	Theory						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	Errors and Sources of Propagation for Errors (08 Hours)						CO1
	• Approximations and Round-Off Errors: • Floating Point Representation of Numbers • Arithmetic Operations with Normalized Floating-Point Numbers and their consequences • Error in Number Representation • Pitfalls in Computing						
	• Iterative Methods • Zeros of a Single Transcendental Equation and Zeros of Polynomial using Bisection Method • False Position Method • Newton Raphson Method						
Unit 2	Solution of Simultaneous Linear Equation (08 Hours)						CO2
	• • Gauss Elimination Method • Pivoting • ILL Conditioned Equations and Refinement Of Solutions • Gauss Siedel Iterative Methods						
	• Numeric Differentiation and Integration • Numerical Differentiation Using Interpolation Method • Numerical Integration, Trapezoidal Rule • Simpson's 1/8 Rule, Simpson 3/8 Rule.						
Unit 3	Numerical Solution of Ordinary Differential equations (07 Hours)						CO3
	• • Euler Method • Runge Kutta Method • Predictor Corrector Method.						

	• Introduction to Statistics • Meaning, Scope, Collection and Classification of Data. • Methods to Measures Central Tendency	
Unit 4	Dispersion	CO4
	• Meaning Measurement of Dispersion (Mean Deviation, Standard Deviation and Variance)	
	• Bivariate Data • Correlation, Meaning, Type of Correlation, Correlation and Causation, Methods of Studying Correlation, • Algorithm to Compute Karl Pearson's Correlation and Rank Correlation. Applications Based On Correlation.

Course Code	CSP202						
Course Title	Object Oriented Programming using Java						
Course Outcomes	On the completion of the course the student will be able to CO1: Solve real world problems using OOP techniques. CO2: Solve problems using java collection framework and I/O classes. CO3: Implement Interfaces and Packages CO4: Develop multithreaded applications with synchronization. Develop applets for web applications and able to design GUI based application						
Examination Mode	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	An Overview of JAVA (08 Hours)						CO1
	- Evolution of Java, Importance of JAVA to Internet, Features of JAVA, Bytecode, Object Oriented Approach. - Various Data Types and Operators, Type Conversion and Casting, One Dimensional and Multidimensional arrays - Selection Statements, Iterative Statements, Jumping statements.						
Unit 2							CO2
	Class Fundamentals, Declaring Objects, Introducing Methods, Constructors, this keyword, Overloading constructors and Methods, Recursion, Nested and Inner classes. Inheritance basics, Creating Multilevel hierarchy, Method Overriding and Abstract Classes.						
	- Packages and Interfaces, Access Protection, Importing Packages, Interfaces, Defining, Implementing, Applying Interfaces, Extending Interfaces. - Exception Handling Fundamentals, Exception Types, uncaught exceptions, try and catch, Creating own Exceptions.						
Unit 3							CO3
	Programming The Java Thread Model, Thread Priorities, Synchronization, Inter thread communication, Suspending, Resuming and Stopping Threads.						
	Java I/O Basics, Streams, reading Console input and writing console output, PrintWriter class, Reading & writing Files, Byte Streams, Character Streams & Serialization.						
Unit 4							CO4
	Applet basics, Applet Architecture, Applet: Display, Repaint, Parameter Passing. Event Handling: The Delegation Event Model, Event Classes, Event Listener Interfaces, AWT Window Fundamentals, Working with Frame Windows, Graphics, Color and Fonts.						
Practicals	List of experiments: Task 1. Inheritance in JAVA Task 2. Interfaces and Packages in JAVA						

	Task 3. Multithreading in JAVA Task 4. Client –Server Networking Task 5. Functional Programming, Pure functional programming- No State, Immutable variables, favor recursion over looping.

Course Title	Database Concepts						
Course Outcomes	On the completion of the course the student will be able to CO1: To understand the basic concepts and the applications of database systems. CO2: To understand the basic concepts of data models and ER Diagrams. CO3: To understand the relational database design principles and apply normalization for the development of application software's CO4: To Master the basics of SQL and construct queries using SQL.						
Examination Mode	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	An Overview of DBMS (08 Hours)						CO1
	• Concept of File Processing Systems and Database Systems - Database Administrator and his Responsibilities - Physical and Logical Data Independence						
	• Three level Architecture of Database System - The External Level, Conceptual Level, The Internal Level						
Unit 2	Introduction to Data Models (08 Hours)						CO2
	• Entity Relationship Model, Hierarchical Model , Network and Relational Model , Comparison of Network, Hierarchical and Relational Model						
	• Data base design and ER diagrams – ER Model - Entities, Attributes and Entity sets – Relationships and Relationship sets – ER Design Issues – Concept Design – Conceptual Design for University or Enterprise.						
Unit 3	Relational Databases (07 Hours)						CO3
	• Introduction , Terms a. Relation b. Tuple c. Attribute d. Cardinality e. Degree f. Domain						
	• Keys (a) Super Key (b) Candidate Key (c) Primary Key (d) Foreign Key						
	• Relational Algebra Operations (a.) Select (b.) Project (c.) Union (d.) Difference (e.) Intersection (f.) Cartesian Product						
Unit 4	Relational Database Design (05 Hours)						CO3
	• Introduction , Anomalies of un normalized database , Normalization , Normal Forms: 1NF, 2NF, 3NF, BCNF, 4th NF, 5th NF						
	• Database Security, Integrity and Control						
Unit 5	SQL (Structured Query Language) (08 Hours)						CO4
	• Introduction , History Of SQL , Basic Structure , DDL Commands , DML Commands , DCL Command, Simple Queries , Nested Queries , Aggregate Functions , Clauses						
	• Join Methods, Union, Intersection, Minus, Views, Sequences, Indexing, Subquery.						
Practicals	List of experiments: Task 1. Introduction to SQL and installation of SQL Server / Oracle.						

	Task 2. Data Types, Creating Tables, Retrieval of Rows using Select Statement Task 3. Conditional Retrieval of Rows, Alter and Drop Statements. Task 4. Working with Null Values, matching a Pattern from a Table Task 5. Ordering the Result of a Query, Aggregate Functions, Grouping the Result of a Query, Update and Delete Statements. Task 6. Set Operators, Nested Queries Task 7. Joins, Sequences. Task 8. Views, Indexes Task 9. Database Security and Privileges: Grant and Revoke Commands, Commit and Rollback Commands.	
Text Book/s	1. Data base System Concepts, Silberschatz, Korth, McGraw hill, Sixth Edition. 2. Data base Management Systems, Raghurama Krishnan, Johannes Gehrke, TATA McGrawHill 3rd Edition.	
Reference Book/s	1. Fundamentals of Database Systems, Elmasri Navathe Pearson Education. 2. An Introduction to Database systems, C.J. Date, A.Kannan, S.Swami Nadhan, Pearson, Eight Edition for UNIT III 3. Simplified Approach to DBMS– Kalyani Publishers

3	0	2	4

Course Code	CSP204						
Course Title	Data Structures						
Course Outcomes	On the completion of the course the student will be able to CO1: Student will be able to handle operation like searching, insertion, deletion, traversing on various Data Structures; CO2: Student will able to write an algorithm Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort; CO3: Students will be able to choose appropriate Data Structure as applied to specific problem definition; CO4: Implement Various searching algorithms and become familiar with their design methods.						
Examination Mode	Theory and Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	Introduction (08 Hours)						CO1
	Primitive and Composite Various Data Structures ,Common Operations on Data Structures, Algorithm Complexity, Time-Space Tradeoff Between Algorithms, Complexity of Algorithms						
	String: Strings as ADTs, Representation and Manipulation, String Operations.						
	Arrays Arrays Defined, Representing Arrays in Memory, Various Operations on Linear Arrays. Bubble Sort. Linear Search, Binary Search Records, Matrices, Sparse Matrices						
Unit 2	Linked Lists, Stacks, Queues (08 Hours)						CO2
	Types of Linked Lists, Representing Linked Lists in Memory, traversing a linked List, Searching in a linked list, Memory Allocation and Garbage Collection, Insertion and deletion in a linked list. Circular Linked List. Advantage of Using Linked Lists Over Arrays, Various Operation on Linked Lists						
	Stacks Description of Stack Structure, Implementation of Stack Using Arrays and Linked Lists, Applications of Stacks: Expression Conversion and evaluation – corresponding algorithms. QuickSort						
Unit 3	Queues, Trees, Graphs, Heaps (08 Hours)						CO3
	Queues						

	Implementation of Queue Using Linked Lists , Circular Queues, De-Queues, Priority Queues.	
	Trees Description of Tree Structure and Its Terminology, Binary Tree, representation in memory, Traversing Binary Trees, Traversal Algorithms using Stacks.	
	Graphs Representation of Graphs and Applications: Adjacency Matrix, Path Matrix Warshall's Algorithm, Linked Representation of a Graph Traversing a Graph: DFS and BFS, Spanning Trees. Heaps Description of Heap Structure, Implementing Heaps Using Arrays	
Unit 4	Searching and Sorting Algorithms (08 Hours)	CO4
	Linear Search, Binary Search Insertion Sort, Selection Sort, Bubble Sort, radix Sort, Merge Sort, Quick Sort	
	Files Operations on Files, Types of Files File Organizations: Sequential Files, Indexed Sequential File, Directed Files and Multikey Files	
Practical:	List of Experiment: Task 1: Write a program to insert a new element at end as well as at a given position in an array. Task 2: Write a program to delete an element from a given array whose value is given or whose position is given. Task 3: Write a program to find the location of a given element using Linear Search. Task 4: Write a program to find the location of a given element using Binary Search. Task 5: Write a menu driven program to perform following insertion operations in a single linked list: i. Insertion at beginning ii. Insertion at end iii. Insertion after a given node iv. Traversing a linked list Task 6: Write a program to implement push and pop operations on a stack using linear array. Task 7: Write a program to convert an infix expression to a postfix expression using stacks. Task 8: Write a program to evaluate a postfix expression using stacks. Task 9: Program to sort an array of integers in ascending order using bubble sort. Task 10: Program to sort an array of integers in ascending order using selection sort Task 11: Program to traverse graphs using BFS. Task 12: Program to traverse graphs using DFS.

Course Code	CSP205						
Course Title	Computer Graphics						
Course Outcomes	On the completion of the course the student will be able to CO1: To implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping. CO2: To describe the importance of two dimensional transformation and viewing. CO3: To describe the importance of three transformation and viewing. CO4: to understand color models in depth..						
Examination Mode	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	Overview of Computer Graphics (08 Hours)						CO1
	Basics of Computer Graphics, Applications, Video Display devices, Raster–Scan displays: Video Controller, Display Processor, Random–Scan displays, Color CRT Monitors; Common Graphic Input devices, Graphics Software’s						
	Output Primitives: Line Drawing: DDA, Bresenham Line Algorithm; Midpoint Circle drawing algorithms; Flood and Boundary Filling Algorithms.						
Unit 2	Two-Dimensional Geometric Transformation and Viewing (08 Hours)						CO2
	Basic transformations: Translation, Rotation, Scaling, Reflection, Shearing Matrix representations and Homogenous Coordinates; Composite transformations: Translations, Rotations, Scaling.						
	Two-Dimensional Viewing: Viewing coordinate reference frame; Window to Viewport coordinate transformation. Point Clipping, Line Clipping: Cohen–Sutherland, Liang– Barskey Algorithms for line clipping; text Clipping;						
Unit 3	Three Dimensional Transformations & Viewing (08 Hours)						CO3
	Translation, Rotation, Scaling, Reflection and composite transformations. Parallel and Perspective Projections, Viewing Transformation: View Plan, View Volumes and Clipping.						
	Visible-Surface Detection Methods Back-Face Detection Depth-Buffer Method A-Buffer Method						

	Scan-Line Method	
Unit 4	Color Models (08 Hours)	CO4
	Color Models: Properties of Light, Intuitive Color Concepts, concepts of chromaticity, RGB Color Model, CMY Color Model, HLS and HSV Color Models, Conversion between RGB and CMY color Models, Conversion between HSV and RGB color models, Color Selection and Applications.	
Practical:	List of Experiment: Task 1. WAP to draw different geometric structures using different functions. Task 2. Implement DDA line generating algorithm. Task 3. Implement Bresenham's line generating algorithm. Task 4. Implement Mid-point circle line generating algorithm. Task 5. Implementation of Bresenham's circle drawing algorithm. Task 6. Implementation of mid-point circle generating Algorithm. Task 7. WAP of color filling the polygon using Boundary fill and Flood fill algorithm. Task 8. To translate an object with translation parameters in X and Y directions. Task 9. Program of line clipping using Cohen-Sutherland algorithm. Task 10. To perform composite transformations of an object.

Course Title	Operating Systems						
Course Outcomes	CO1-To understanding CPU Scheduling, Synchronization, Deadlock Handling and CO2-Comparing CPU Scheduling Algorithms. Solve Deadlock Detection Problems. CO3-To describe the role of paging, segmentation and virtual memory in operating systems. CO4-To defining I/O systems, Device Management Policies and Secondary Storage Structure and Evaluation of various Disk Scheduling Algorithms.						
Examination Mode	Theory+ Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	Introduction to Operating System (15 Hours)						CO1
	- OS, History of OS, Types of OS - Functions/operations of OS, User services/jobs, system calls - Traps, architectures for operating systems						
	Process Management - Process overview, Process states - Interrupt mechanism						
Unit 2	CPU Scheduling and Process Synchronization(18 hours)						CO2
	Scheduling algorithms Pre-emptive scheduling & Non-Pre-emptive scheduling Levels of schedulers Process Synchronization, Critical section and mutual exclusion problem Classical synchronization problems, Multithreading.						
	System Deadlock Deadlock characterization, Deadlock prevention and avoidance Deadlock detection and recovery, practical considerations						
Unit 3	Storage Management (15 Hours)						CO3

	Storage allocation methods: Single contiguous allocation, Multiple contiguous allocation	
	Memory Management - Paging, Segmentation combination of Paging and Segmentation - Virtual memory concepts, Demand Paging, Page replacement Algorithms - Thrashing. Address Protection, - Cache memory, hierarchy of memory types, associative memory.	
Unit 4	File Management (12 Hours)	CO4
	- Overview of File Management System - Disk Space Management, Directory Structures - Protection Domains, Access Control Lists, Protection Models - Queue management, File and directory systems	
	Device Management - Goals of I/O software, Design of device drivers, Device scheduling policies - FCFS, SSTF, SCAN, CSCAN, LOOK, CLOOK

Course Code	CSP303						
Course Title	Web Engineering using ASP.NET						
Course Outcomes	CO1: To explain the three pillars of object oriented programming. CO2: To develop working knowledge of Standard Controls, validation controls and Rich controls. CO3: To learn to design Website with Master Pages, List Controls and Grid View Controls CO4: To learn to work with SQL Data Source Control and Building Data Access Components with ADO.NET.						
Examination Mode	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	Introduction						CO1
	Overview of .NET Framework , Common Language Runtime (CLR) The .NET Framework Class Library, familiarization with visual studio.NET IDE, Design Window, Code Window, Server Explorer, Toolbox, Docking Windows, Properties Explorer, Solution Explorer, Object Browser, Dynamic Help, Task List Explorer Features of .NET, XML Editor, Creating a Project, Add Reference, Build the Project, Debugging a Project						
Unit 2	Introduction to Standard Controls						CO2
	Display information, Accepting user input, Submitting form data, Displaying images, Using the panel control, using the hyperlink control						
	Introduction to Validation Controls						
	Using the required field validator control, using the range validator control, using the compare validator control, using the regular expression validator control, using the custom validator control, using the validation summary controls.						
	Introduction to Rich Controls						
	Accepting file uploads, Displaying a calendar, Displaying advertisement,						

DAV UNIVERSITY, JALANDHAR

	Displaying different page views	
Unit 3	Designing Website with Master Pages	CO3
	Creating master pages, Modifying master page content, and Loading master page dynamically.	
	List Controls Dropdown list control, Radio button list controls, list box controls, bulleted list controls, custom list controls	
	Grid View Controls	
	Grid view control fundamentals, Using field with the grid view control, working with grid view control events extending the grid view control.	
Unit 4	SQL Data Source Control	CO4
	Creating database connections, Executing database commands, Using ASP.NET parameters with the SQL data source controls, programmatically executing SQL data source commands.	
	Building Data Access Components with ADO.NET	
	Connected data access Disconnected data access Executing a synchronous database commands, Building database objects with the .NET framework	
Practical:

Course Code	CSP302						
Course Title	Programming in Python						
Course Outcomes	CO1: To acquire programming skills in core Python. CO2: To acquire the skills of using operators and working with control constructs in Python CO3: To develop the skills of using data types and creating & designing functions & modules and object oriented programming in Python. CO4: To acquire object oriented programming, File handling and Exception Handling Skills in Python						
Examination Mode	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/ Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%	-	
Syllabus							CO Mapping
Unit 1	Introduction to Python Language						CO1
	Programming language, History of Python, Origin of Python Programming, Features, Limitations, Applications, Getting and Installing Python, Python Environment Variables, Python Help, Python differences from other languages						
	Python Data Types and Input Output						
	Keywords, Identifiers, Variables, Statements, Indentation, Documentation, Data Type, Type Conversion. Python Input and Output.						
Unit 2	Operators and Expressions						CO2
	Arithmetic, Comparison, Assignment, Logical, Bitwise, and Python special operators. Expressions, Precedence and Associativity						
	Control Structures						
	Decision Making Statements Python Loops Python Control Statements						
Unit 3	Python Native Data Types						CO3
	Creation of following Data Types along with methods and functions Number, String, Tuple Set, Dictionary						

DAV UNIVERSITY, JALANDHAR

	Python Functions and Modules	
	Creating Functions, Advantages of Functions, Types of Functions, Built-In, User Defined Functions, Anonymous Functions, Call by object reference, Call by assignment, Recursion, Designing of Modules, Importing Modules.	
Unit 4	Python Class and Objects	CO4
	Designing Classes, Creating Objects, Accessing Objects, init method, constructor, garbage collection, destroying objects, inheritance and operator overloading	
	File Handling	
	File creation, open() and close() methods, read() and write() methods, file modes, file encoding, file object attributes, renaming and deleting files, Python directory, directory methods and functions.	
	Exception Handling	
	Python Exception, Built-in Exception, Exception Handling, Try, except, finally, Python user defined exceptions	
Practical:

Course Code	CSP304						
Course Title	Cyber Security						
Course Outcomes	On the completion of the course the student will be able to: CO1: Acquire knowledge about various Information Systems. CO2: Understand the key security requirements of Confidentiality, Integrity & Availability. CO3: Demonstrate the concept of Intrusion Detection & Intrusion Prevention. CO4: Apply Symmetric Encryption techniques. CO5: Describe the concept of Security policies and Cyber Laws.						
Examination Mode	Theory						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%	10%	25%	-	50%		5%
Syllabus							CO Mapping
Unit 1	Introduction to Cyber security (12 Hours)						CO1
	- Defining Cyberspace and Overview of Computer and Web-technology, Architecture of cyberspace, Communication and web technology - Internet, World wide web, Advent of internet, Internet infrastructure for data transfer and governance, Internet society. - Regulation of cyberspace, Concept of cyber security. - Issues and challenges of cyber security.						
Unit 2	Classification of Cybercrimes (10 Hours)						CO2
	- Common cyber crimes- cybercrime targeting computers and mobiles, cyber crime against women and children. - Financial frauds, social engineering attacks, malware and ransomware attacks, zero day and zero click attacks.						
Unit 3	Cybercrime and cyber laws (7 Hours)						CO3
	- Cybercriminals modus-operandi, Reporting of cybercrimes, Remedial and mitigation measures. - Legal perspective of cybercrime, IT Act 2000 and its amendments, Cyber crime and offences. - Organisations dealing with Cybercrime and Cyber security in India, Case studies.						
Unit 4	E-Commerce and Digital Payments (7 Hours)						CO4
	Definition of E- Commerce, Main components of E-Commerce,						

DAV UNIVERSITY, JALANDHAR

	Elements of E-Commerce security, E-Commerce threats, E-Commerce security best practices. • Introduction to digital payments, Components of digital payment and stake holders, Modes of digital payments- Banking Cards, Unified Payment Interface (UPI), e-Wallets, Unstructured Supplementary Service Data (USSD), Aadhar enabled payments. • Digital payments related common frauds and preventive measures.

Course Title	Data Warehousing and Mining						
Course Outcomes	On the completion of the course the student will be able to: CO1: Understanding Data Warehousing Concepts. CO2: Data Modeling and Schema Design. CO3: Data Mining Techniques and Algorithms. CO4: Big Data and Advanced Data Mining. CO5: Evaluation and Interpretation of Results.						
Examination Mode	Theory + Practical						
Assessment Tools	Written Quiz	Assignment/Project Work	MSE	MTP	ESE	EPR	ABL/PBL
Weightage	10%		25%	-	35%	25%	5%
Syllabus							CO Mapping
Unit 1	Introduction of Data warehousing						CO1
	- The need for data warehousing - Operational & Informational Data Stores - Data Ware house Characteristics, Data Warehouse role & Structure, The cost of warehousing data Introduction to OLAP & OLTP: Difference between OLAP & OLTP. OLAP Operations						
Unit 2	Design and Implementation of Data warehouse						CO2
	- Building a Data Warehouse - Design/Technical/Implementation Considerations - Data Pre-processing Overview: Data Summarization, Data Cleaning, Data Transformation, Concept Hierarchy, Structure. - Overview of Patterns & Models and Artificial Intelligence - Multidimensional Data Model, Schemas for Multidimensional Data (Star Schema, Snowflake Schema, Fact Constellation)						
Unit 3	Data Mining						CO3
	- Association Rule Mining, Market Basket Analysis, Algorithm, Mining Multilevel Association Rules, From Association Mining to Correlation Analysis, Constraint Based Association Mining, - Introduction to Classification, Classification by decision Tree, Attribute Selection Measure						
Unit 4	Introduction to Prediction techniques						CO4

DAV UNIVERSITY, JALANDHAR

•	• Accuracy of a Classifier • Cross-Validation, Bootstrap, Boosting, Bagging • Introduction to Clustering, Classification of Various Clustering Algorithms, Selecting and Using Right DM Technique, Selecting and Using Right DM Technique, Data Visualization	
Practical:	List of Experiments: • Task 1: Introduction to Data Warehousing Concepts. • Task 2: Dimensional Modelling and Schema Design. • Task 3: Data Integration and ETL (Extract, Transform, Load) Process. • Task 4: OLAP Operations and Cube Creation. • Task 5: Querying Data from Data Warehouse. • Task 6: Data Warehouse Data Validation. • Task 7: Introduction to Data Marts and their Implementation. • Task 8: Understand data mining processes, including data cleaning, transformation, and mining. • Task 9: Apply feature selection methods to improve model performance. • Task 10: Analyse the clustering results and evaluate the quality of clusters using metrics like silhouette score. • Task 11: Implement linear regression and logistic regression models. • Task 12: Evaluate and compare different data mining models using techniques such as cross-validation, ROC curves, and confusion matrix. • Task 13: Implement anomaly detection techniques on datasets (e.g., using statistical methods, KNN, or clustering).

Course Code	CSP308							
Course Title	Data Analytics							
Course Outcomes	After completion of this course, student will be able to apply various concepts of data analytics to solve various problems. CO1: Students will be able to articulate meaningful lines of inquiry that might be explored through the collection, organization, visualization, and analysis of data in a context associated with their primary field of study using (as appropriate) numerical, textual, spatial, and/or visual data. CO2: Student will have intermediate proficiency in the association rule mining CO3: Apply computing theory, languages, and algorithms, as well as mathematical and statistical models, and the principles of optimization to appropriately formulate and use data analyses CO4: Students can use graphs for Big data analytics.							
Examination Mode	Theory/ Practical/ Theory + Practical							
Assessment Tools	Quiz	Assignment/ Project Work	ABL/PBL	MSE	MTP	ESE	ETP	Total
Weightage	10%	-	5	25%	-	35%	25%	100
Syllabus								CO Mapping
UNIT 1	Introduction to Data Analytics (12 Hours)							
	Types of Data Analytics - Predictive Analytics - Simple linear regression - Multiple linear regression - Auto regression - Moving Average - Autoregressive Integrated Moving Average - Data Pre-processing - Data Cleaning - Data Integration and Transformation - Data Reduction - Descriptive data analytics - measures of central tendency - measures of location of dispersions.							CO1
UNIT 2	Association Rule Mining (12 Hours)							
	Efficient and Scalable Frequent Item set Mining Methods - Mining Various Kinds of Association Rules - Association Mining to Correlation Analysis - Constraint Based Association Mining - Cluster Analysis: Types of Data in Cluster Analysis - A Categorization of Major Clustering Methods - Partitioning Methods - Hierarchical methods.							CO2
UNIT 3	Introduction to Streams Concepts (12 Hours)							
	Stream data model and architecture - Stream Computing - Sampling data in a stream - Filtering streams - Counting distinct elements in a stream - Estimating moments - Counting oneness in a window - Decaying window - Real Time Analytics Platform (RTAP) applications - case studies - real time sentiment analysis - stock market predictions.							CO3
UNIT 4	Using Graph Analytics for Big Data (12 Hours)							
	Practicing on Triggers - creation of trigger, Insertion using trigger, Deletion using trigger, Updating using							

DAV UNIVERSITY, JALANDHAR

	trigger. Procedures- Creation of Stored Procedures, Execution of Procedure, and Modification of Procedure Cursors- Declaring Cursor, Opening Cursor, Fetching the data, closing the cursor	CO4
--	--	-----

Practical	List of Experiment: - Task 1: -Perform various data statistical operations on sample dataset. Task 2: -Perform various data pre-processing related operations over dataset using machine learning libraries. Task 3: -Take any sample dataset and demonstrate correlation between features of the dataset using Libraries. Task 4: -Take a sample dataset; reduce number of features applying data dimension reduction technique. Task 5: -Demonstrates K-means data clustering technique using sample dataset. Task 6: -Demonstrates data visualization on sample dataset.8. Apply the analytics and visualization to any real world problem of your choice. Task 7: -Apply statistical tests (e.g., t-tests, chi-square tests) to analyze data distributions.

Course Title	Big Data							
Course Outcomes	After completion of this course, student will be able to apply various concepts of data analytics to solve various problems. CO1: Understand the concepts of distributed file system. CO2: Learn abstraction of Hadoop environment. CO3: Study the Hadoop architecture. CO4: Know the Hadoop ecosystem and yarn components. Learn different architecture like HIVE and HIVEQL, HBASE.							
Examination Mode	Theory + Practical							
Assessment Tools	Quiz	Assignment/Project Work	ABL/PBL	MSE	MSP	ESE	ESP	Total
Weightage	10	-	5	25	-	35	25	100
Syllabus								CO Mapping
UNIT 1	Introduction to Big Data (12 Hours)							
	Overview of Big Data, Stages of analytical evolution, Challenges of Conventional Systems, Intelligent data analysis, Nature of Data, Analytic Processes and Tools, Analysis vs. Reporting, Modern Data Analytic Tools, Statistical Concepts: Sampling Distributions - Re-Sampling, Statistical Inference - Prediction Error							CO1
UNIT 2	Mining Data Streams:(12 Hours)							
	Introduction To Streams Concepts, Stream Data Model and Architecture, Stream Computing, Sampling Data in a Stream, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments, Counting Oneness in a Window, Decaying Window, Real time Analytics Platform(RTAP) Applications							CO2
UNIT 3	Hadoop: (12 Hours)							
	History of Hadoop, The Hadoop Distributed File System, Components of Hadoop, Analyzing the Data with Hadoop, Scaling Out- Hadoop Streaming, Design of HDFS-Java interfaces to HDFS Basics, Developing a Map Reduce Application, How Map Reduce Works, Anatomy of a Map Reduce Job run-Failures, Job Scheduling-Shuffle and Sort, Task execution, Map Reduce Types and Formats, Map Reduce Features							CO3
UNIT 4	Frameworks:(12 Hours)							
	Applications on Big Data Using Pig and Hive, Data processing operators in PigHive services, HiveQL, Querying Data in Hive, Fundamentals of HBase and Zookeeper, Visualizations: Visual data analysis techniques, interaction techniques. Systems and applications							CO4

DAV UNIVERSITY, JALANDHAR

Practical	List of Experiment: - Task 1: - Big Data Overview and Exploration Task 2: - Stram Data Simulation and Stream Data Architecture Design Task 3: -Hadoop Installation and Setup Task 4: - Install and configure Apache Pig. Task 5: - Set up HBase and Zookeeper on a local machine or a Hadoop cluster. Task 6: -Demonstrates data visualization on sample dataset.8. Apply the analytics and visualization to any real-world problem of your choice. Task 7: -Apply statistical tests (e.g., t-tests, chi-square tests) to analyze data distributions.

SEMESTER 6

L	T	P	Credits	Marks
3	0	0	3	100

Course Code	CSP310							
Course Title	Design and Analysis of Algorithm							
Course Outcomes	After completion of this course, student will be able to apply various concepts of data analytics to solve various problems. CO1: Define and understand basic concepts related to algorithms, including algorithm design, analysis, and their applications. CO2: Analyze the time and space complexity of algorithms using Big-O, Big-Ω, and Big-Θ notations. CO3: Design and analyze common sorting and searching algorithms and evaluate their performance. CO4: Design and implement dynamic programming algorithms to solve problems with optimal substructure.							
Examination Mode	Theory							
Assessment Tools	Quiz	Assignment/ Project Work	ABL/PBL	MSE	MSP	ESE	ESP	Total
Weightage	10	10	5	25	-	50	-	100
Syllabus								CO Mapping
UNIT 1	Introduction (12 Hours)							
	Concept of Algorithm, Role of Algorithms in Computing, Algorithm Specification, Performance Analysis (Time and space complexities), and Growth of functions: Asymptotic Notation, Standard notation & common functions; Introduction to Recurrences: substitution method, recursion-tree method, master method, Brute-Force, Branch and Bound, Randomizing Algorithms, Depth First Search (DFS) and Breadth First Search (BFS), Topological sorting, Divide and Conquer, General Method, Binary Search, Merge sort, Quick sort, Selection sort.							CO1
UNIT 2	Greedy Algorithms:(11 Hours)							
	Elements of Greedy strategy, Activity Selection Problem, Knapsack problem, Minimum Cost Spanning Trees (Prim's Algorithm, Kruskal's Algorithm), Single source Shortest paths problem and analysis of these problems.							CO2
UNIT 3	Dynamic Programming: (11 Hours)							
	Elements of dynamic programming, Assembly-line scheduling problem, Matrix-chain multiplication, Multistage Graph, All Pairs Shortest paths, Longest common subsequence, Bin Packing, 0/1 Knap Sack and Travelling Salesman Problem.							CO3
UNIT 4	Back Tracking:(11 Hours)							
	General method, 8 queen's problem, Graph coloring and Hamiltonian Cycles, 0/1 Knap Sack Problem, NP-Completeness ,Polynomial Time, polynomial-time verification, NP completeness & reducibility, NP-complete problems, Cook's							CO4
