9	B.Sc. B.Ed.	Solid State Physics	EDU313	Dr. Praveen Kumar	V	1.87	The number of credits allotted per semester is 34 (thirty four) and the teacher assistance during the course results in less time devoted to the class room teaching or self study by the students.	The credit allotment to each semester should be reformulated so that the students can give sufficient time for self study to the core courses of science (B.Sc.) which is essential part of the B.Sc.B.Ed program.
10	M.Sc. (Hons.) Physics	Electronics-II	PHY605A	Dr. Sandeep Kumar	3rd	1.79	The number of COs in this course is six, and the students have not attempted the questions of certain COs. Although the pass percentage of the students is 100 percent	The number of COs should be four, based on the four units of the course, so that the number of questions asked in the paper is equal. Weak students should need more attention after the MSE exams.
11	M.Sc. (Hons.) Physics	Quantum Mechanics	PHY504A	Dr. Sandeep Kumar	1st	1.55	Some of the COs are not attempted by the students due to the old pattern of the MSE examination. Also, the number of COs is six, so the number of questions asked was less from 1-2 COs, and their difficulty level was higher.	The number of COs should be four, based on the four units of the course, so that the number of questions asked in the paper is equal. Weak students should need more attention. Practice with more numerical problems is required at the end of each unit of the course.

12	B.Sc. (Hons.) Physics	Quantum Physics	PHY322	Dr. Sandeep Kumar	5th	1.05	This course is taught to BSc computer science and BSc (Hons.) physics students. Most of the students in the B.Sc. in computer science were not very serious I tried to counsel them many times at the end of the MSE exam. Second, due to the more number of COs and the older portion of the MSE exam, students have not attempted questions from a few COs. Also, this course requires basic mathematical skills to solve numerical problems.	1. The number of COs should be four, based on the four units of the course, so that the number of questions asked in the paper is equal. 2. Weak students and interdiscipline students should need more attention. 3. Extra classes and tutorials for the students for more numerical practice and to learn the basics of mathematics. 4. More activity-based learning to create interest in the students
